Labatie, M. de.

1844. See Bouteille, Hipp.; and Labatie, *Ornithologie du Dauphiné*,
1843-44.

Lacépède, Bernard Germain Étienne de la Ville.

1818. See Buffon, George L. L., *Oeuvres Complètes*.

Lacépède, Bernard Germain Étienne de la Ville.

1819. *Vue générale | des progrès | de plusieurs branches | des sciences naturelles, | depuis la mort de Buffon, | Pour faire suite aux Œuvres complètes | de ce grand naturaliste; | Par M. le Comte de Lacépède. | Paris, | Rapet et Cie, Rue Saint-André-Des-Arcs, No. 41, | Éditeurs des Œuvres complètes de Buffon, en douze | volumes in -8o., avec cinq volumes de supplément, par M. le Comte de Lacépède. | 1818.*

1 vol. post 8vo, 2 pr. ll. (half-tit. and tit.), pp. 1-112. Paris.

A general essay on the (then) recent progress in natural science. On pp. 74-89 and 92-112 are a "Tableau des Sous-Classes, Divisions, Sous-Divisions, Ordres et Genres des Oiseaux" and a "Table Méthodique de la Classe des Mammifères." These appear to be the "Tableaux Méthodiques des Mammifères et des Oiseaux" first published in 1799 in the author's "Discours d'Ouverture et de Clôture du Cours d'Histoire Naturelle," etc. (Cf. Richmond, *Auk*, 16, pp. 325-329, 1899 and l.c. 17, pp. 166-167, 1900.). On pp. 72-73 and 90-91 are supplements to the "Tableau" and "Table," containing references to various authors whose recent works may be consulted for additions to the lists of genera and subgenera here published. The arrangement of the new genera of birds in these lists is the same as copied by Richmond (l.c., 17, p. 167) from Lacépède's original Tableaux and it appears probable, therefore, that the tables have not been altered here, but I am unable to state this definitely in the

absence of the original work. Although the title-page bears the date, 1818, the general text (p. 71) is dated December 12, 1818, and Engelmann quotes the work under date of the following year, which is probably correct. The present copy is bound with Vol. XII of Lacépède's "Oeuvres Complètes de Buffon, Nouvelle (Rapet) Ed.," 1817-19 (Cf. Buffon, 1818.). It forms a sort of appendix or supplement to this work and was originally intended to be issued with Vol. XII; a note by the publishers on p. 566 of that volume announces that it will form a separate volume which will be issued separately a month later and supplied free to subscribers. It therefore may be considered to form a distinct publication under its own title.

Lacroix, Adrien.

1873-75. Catalogue raisonné | des oiseaux | observés | dans les Pyrénées Françaises | et les régions limitrophes | comprenant | les départements de la Haute-Garonne, de l'Aude, de l'Ariège, du Gers, | de l'Hérault, des Hautes-Pyrénées, | du Tarn, du Tarn-et-Garonne et des Pyrénées-Orientales | suivi de deux tables alphabétiques des espèces et de leurs synonymes | en patois de Toulouse | avec huit planches coloriées | par | Adrien Lacroix | Membre Fondateur de la Société d'Histoire Naturelle de Toulouse | Toulouse Paris | Édouard Privat J.-B. Baillière et Fils, | Libraire-Éditeur, Libraire de l'Académie nationale de Médecine | Rue des Tourneurs, 45 Rue Hautefeuille, 19 | 1873-1875.

1 vol. 8vo, pp. 1-299, pll. 1-8 (col.; by Lacroix). Toulouse and Paris.

A synonymic, distributional catalogue, without descriptions. I can find no information relative to its manner of publication except that much the same subject matter was covered by the author in articles published in the Bulletin de la Société d'Histoire Naturelle de Toulouse, 1872-75. The present work may be a compilation of these, published in 1875. The preface, dated April 9, 1873, begins on a page whose heading is the title of one of the articles, not of the complete work, reading, "Catalogue raisonné des Oiseaux Observés sur le versant Français des Pyrénées," etc.

The copy has the name of Lacroix in manuscript on the title-page and contains the bookplate of F. D. Godman.

Lafresnaye, Frédéric de.

1838. Essai | d'une nouvelle manière de grouper les genres | et les espèces | De l'Ordre | des Passereaux | (Passeres L.) | d'après leurs rapports de mœurs et d'habitation, | Par F. de La Fresnaye. | Falaise, | Brée l'ainé, imprimeur-libraire. | Paris; Meilhac, libraire, Cloître Saint-Benoît, 10. | 1838.

1 vol. post 8vo, tit., pp. 1-25. Falaise.

A rare paper on the general classification of Passerine birds, including the descriptions of two new species, "*Turdus nivei-capillus*" (p. 16) and "*Argya luctuosa*" (p. 22). It appears to be a separate work but Bangs and Penard (Bull. Mus. Comp. Zool., 63, No. 2, p. 31, June 1919) cite it as having some connection

with the *Memoires de la Société académique des Sciences, Arts et Belles-Lettres de Falaise*. Engelmann cites the title under date of 1841 which is evidently an error.

Laimbeer, Richard Harper.

1923. *Birds I have known* | by | Richard Harper Laimbeer | illustrated with 50 colored plates, | and with 48 snapshots from life | by the author | G. P. Putnam's Sons | New York & London | The Knickerbocker Press | 1923.

1 vol. post 8vo, pp. I-XVIII, 1-401, 50 pll. (col.; by Allan Brooks, L. A. Fuertes, Bruce Horsfall and L. Sawyer), 49 text-figs. (full p.). New York and London.

A popular account of observations on bird-life on Long Island, U. S. A. The colored plates are from the leaflets of the National Association of Audubon Societies.

Laing, Hamilton M.

1913. *Out with the birds* | by | Hamilton M. Laing | Illustrated with Photographs | [*Design.*] | New York | Outing Publishing Company | MCMXIII.

1 vol. post 8vo, pp. 1-249, 24 pll. New York.

Miscellaneous popular essays on bird-life and on the author's experiences afield.

Laishley, Richard.

1858. *A popular history of British birds' eggs.* | By | Richard Laishley. | London: | Lovell Reeve, Henrietta Street, Covent Garden. | 1858.

1 vol. crown 8vo ($4\frac{3}{4} \times 6\frac{1}{4}$), pp. I-XI+1, 1-313, pll. I-XX (col.). London.

A popular account of the nests and eggs of British birds, illustrated with very poor colored plates.

1834. *Systematische Aufzählung der Vögel Württembergs*, | mit | Angabe ihrer Aufenthaltsörter und ihrer Strichzeit. | Aus Auftrag | der Central-Stelle des landwirtschaftlichen Vereins in Württemberg | entworfen | von | Christian Ludwig Landbek. |

Grundherrl. von Gemmingen-Steinegg'schem Rent-Beamten. | Besonders abgedruckt aus dem Correspondenzblatt des landwirtschaftlichen | Vereins. | Stuttgart und Tübingen, | in der J. G. Cotta'schen Verlagshandlung. | 1834.

1 vol. post 8vo, (orig. cover), pp. I-XII, 1-84, [103-107 (altered to 85-89)+1, 333-336, 64 ll. (manuscript), 13 pll. (col.; 2 fold.)]. Stuttgart and Tübingen. 1834 [-?].

A detailed account of the birds of Wurtemberg. This is the author's own copy with marginal annotations and 64 ll. of manuscript notes. Some of these notes were published subsequently by the author in various places. The illustrations are all extras and comprise 13 plates, two of which are original drawings, 2 apparently unpublished lithographs, 8 lithographs prepared for publication as pll. I-V, VIII, IX and XI of the author's "Naturgeschichte und Abbildungen sämtlicher Vögel Europa's" (which never appeared), and 1 etching of uncertain origin. There are also appended two supplements which appear to have been published in the "Correspondenzblatt des landwirtschaftlichen Vereins" where the present work made its first appearance; I am unable to fix any dates for them. A reference in each of the supplements indicates that the general work appeared in the "Corr. Bl. des landw. Vereins, Jahrgang 1835, Bd. I, H(eft) 1, S. 17," a year later than the date on the title-page of the separate reprint. A manuscript note by Homeyer on the inside of the front cover explains the origin of the present copy.

Langdon, Frank W.

1877. A catalogue | of the | Birds of the Vicinity of Cincinnati, | with notes. | By | Frank W. Langdon. | Salem, Mass.: | The Naturalist's Agency. | 1877.

1 vol. 8vo, pp. 1-18. Salem. April 1877.

An annotated check-list of 282 species and subspecies. A revised list (q.v.) was published in 1879. The copy at hand was presented to Ernest Ingersoll by the author; the letter accompanying the gift is attached. The date, as quoted, is given by the author in his revised list.

Langdon, Frank W.

1879. A revised list | of | Cincinnati birds, | by | Frank W. Langdon. | 1879. | Printed by James Barclay, 269 Vine Street, Cincinnati, O.

1 vol. 8vo, cover-tit., pp. 1-27. Cincinnati.

A separately paged reprint of the author's paper published in the Journal of the Cincinnati Society of Natural History, 1, No. 4, pp. 167-193, Jan. 1879. The original list, "A Catalogue of the Birds of the Vicinity of Cincinnati" (q.v.), was published in 1877. The title transcribed above is from the original wrapper.

Langville, J. Hibbert.

1884. Our birds | in | their haunts: | a popular treatise on the birds of | eastern North America. | By | Rev. J. Hibbert Langville,

M.A. | [*Quot.*, 9 lines.] | Boston: | S. E. Cassino & Company. | 1884.

1 vol. 8vo, pp. 1-624, 2 pll., 24 text-figs. (3 full-p.). Boston.

An extensive series of essays on bird-life, based on personal observations, arranged by species (not in systematic order) and illustrated by woodcuts. Of a distinctly popular nature, the book contains a mass of information presented in literary form.

Laplace, Cyrille Pierre Théodore. (Eydoux, Fortune; Gervais, Paul.).

Fortuné Eydoux, Chirurgien [*etc.*, 5 lines.]. > 2e partie. | Zoologie, | par | MM. Fortuné Eydoux et Paul Gervais.

1 vol. 8vo, pp. J-VIIIJ, 2 ll. (subtit. and tit. of Pt. I), pp. 1-195+1, 1-64 (incl. tit. of Pt. II), 64 bis-64 quater., 65-200, I-IV (incl. tit. of Suppl.), 5-30, 1-2 (index to Suppl.), pll. 1-60 (51 col.; 1 fold.; 16 ornith., 15 col.), Suppl. pll. 1-10 (col.). Paris.

The report on the zoology of the voyage of *La Favorite*. This forms the fifth volume of text of the complete report of 1833-39, which embraces 5 vols. text and 2 vols. plates (not including the plates in the present volume). It consists of a reprint of various papers which appeared in the "Magasin de Zoologie" during the years 1836-39. The ornithological portion, which occupies pp. 29-64 quater. of Pt. II and pll. 10-25, appeared in the "Magasin" as follows. Pp. 29-64 and pll. 10-24 appeared in 1836 as pp. 3-37 (pagination separate) and pll. 62-76, one leaf (pp. 1-2) being occupied by a title-page, not reprinted; pp. 64 bis-64 quater. and pl. 25 appeared in 1838 as pp. 1-3 (pagination separate) and pl. 86. The text of the reprint is practically identical with its original, although there are minor alterations; pl. 18 (70 in the original) is labeled *Passerina montana* instead of *P. gullata*, an error which is corrected on p. 49, footn. There are some differences, also, in the coloration of the plates. The ornithological text is the work of Eydoux and Gervais; the plates are by E. Traviés, G. Prêtre and A. Prévost.

Lardner, Dionysius. (Swainson, William.)

1836-37. > [**The cabinet cyclopaedia . . . On the natural history and classification of birds** (*etc.*).]

> The | cabinet | of | natural history. | Conducted by the | Rev. Dionysius Lardner, LL.D. [*etc.*, 2 lines.] | assisted by | eminent

scientific men. | On | the natural history and classification | of | birds. | By | William Swainson, Esq. A.C.G. [*etc.*, 4 lines.; William Swainson. A.C.G. (*etc.*, 2 lines)]. | Vol. I [II]. | London: | printed for | Longman, Rees, Orme, Brown, Green & Longman, | Paternoster-Row; | and John Taylor, | Upper Gower Street. | 1836 [1837].

2 vols. cap 8vo. Vol. I, 2 pr. ll.¹, pp. V-VIII, 1-365, vignette (on engr. tit.), text-figs. 1-113. Vol. II, 2 pr. ll. (see last footnote), pp. V-VI, 1 l. (note), pp. 1-398, vignette (on engr. tit.), text-figs. 114-338. London.

A little work of considerable scope in which the author reviews the entire class, Aves. Pt. I relates to the "structure and natural history of birds in general"; Pt. II, to the "bibliography, nomenclature and preservation" (=taxidermy) "of birds"; Pt. III, to the "natural history and relations of the different orders, tribes, and families of birds"; Pt. IV contains a "synopsis of a natural arrangement of birds" in which families and genera are described (some of the genera being new) and characteristic species are listed. Pt. V, intended for this work and containing descriptions of numerous species, was issued in 1837 as Pt. III of "Animals in Menageries" (q.v.), another volume of the present series of "The Cabinet Cyclopaedia." Some new species are named in the present work in various parts of the text. Vol. I contains Pts. I, II and a portion of III; Vol. II completes the work. The numerous text-figures are mostly illustrative of morphological details and are of excellent quality, being drawn by the author. The text is not entirely reliable since many of the author's statements are strained to accord with the "Quinary System" of classification, adopted throughout. Sherborn (*Index Animalium*, Sect. 2, Pt. 1, p. CXXI, 1922) cites Vol. I under date of Oct. 1836 and II, under date of June 1837; Richmond (*Auk*, 17, p. 179, 1900) quotes Vol. II under date of July, 1837.

In the present copy, the original title-pages bearing the words, "The Cabinet Cyclopaedia," have been replaced by the substitute title-pages reading, "The Cabinet of Natural History." These substitute title-pages appear to have been issued with certain volumes to permit all the works relating to natural history to be segregated, if desired, under their own special heading.

¹Engraved title and second title-page which is evidently an insert, the original title-page of "The cabinet cyclopaedia" having been removed. Both title-pages appear to have been supplied with the natural history volumes of this series.

Vignette (on engr. tit.), figs. 1-71. London.

Accounts of the habits and peculiarities of mammals and birds found in menageries and aviaries or suitable for preservation therein; compiled from various sources. This was the original content of the work (Pts. I and II), but a third part was added to include matter which had been omitted, through necessity, from a former work, "On the Natural History and Classification of Birds," 1836-37 (q.v.), in the same series as the present volume. This added matter was originally intended to form Pt. V. (Vol. II) of that treatise and is cited as such in the text of the volume, itself, as well as in the author's "Birds of Western Africa," 1837 (q.v.). A note on the unpagged leaf in Vol. II of the "Nat. Hist. and Classif. of Birds" and a footnote on p. 244 of Vol. II of the "Birds of Western Africa" explain the necessity for omitting the paper from its indicated position (owing to the bulk of the volume) and state the plan to publish it in connection with a later volume of the series, as was done herewith. The note in the "Birds of Western Africa" further states that "proof sheets have been forwarded to our most distinguished ornithologists," a circumstance which may constitute a prior publication of the subject matter, dating between June and September, 1837. The paper is important since it consists of descriptions and notes on the habitat of 229 species, 1 genus and 1 subgenus of birds, most of which are new.

The present volume bears the date 1838 but Sherborn (Index Animalium, Sect. 2, Pt. 1, p. CXXI, 1922) gives the date of publication as December 1837. The work forms Vol. 98 of "The Cabinet Cyclopaedia."

A series of descriptions and colored plates of birds of the world, arranged under vernacular names but with a list of synonyms under each, including Linnaean binomials. At the completion of the work, the author prepared an "Index Ornithologicus," 1790 (q.v.), in which a scientific nomenclature is adopted for the species. He also issued a "Supplement," 1787, and a "Supplement II," 1801 (q.v.), to the present work, and after the completion of the second supplement issued a "Supplementum Indicis Ornithologici," 1801 (q.v.), to establish the nomenclature of the forms therein. Considerably later, a new edition of the work was issued under the title of "A General History of Birds," 1821-28 (q.v.). An edition in German, revised and supplemented by Bechstein, appeared in 1793-1812 (Cf. Latham, Johann Lathams Allgemeine Uebersicht der Vögel.). Of the present series of works, the edition was 500 copies except of "Supplement II" which Latham states (Gen. Hist. Bds. I, p. VI) was published by his booksellers and not by himself and limited to 250 copies. The preface to Vol. I Pt. I is dated Jan. 1, 1781; of II Pt. I, Dec. 1, 1783; of III Pt. I, May 2, 1785. The plates are by the author.

1 vol. demy 4to, illum. tit., pp. I-III+1, 1-298, 8 ll. (direct. for pll., bibliogr., errata and index), pll. CVII-CXIX (*col.*). London.

This volume contains revisory notes on some of the species of birds treated by the author in his "General Synopsis," 1781-85 (q.v.), with additional species discussed in full as in the earlier work. Species and plates are numbered in continuance of the series in the "General Synopsis" and are included, likewise, in the "Index Ornithologicus," 1790 (q.v.). A detailed "List of the Birds of Great Britain" occupies pp. 281-298. The preface of this supplement is dated May 1, 1787. A second supplement followed in 1801 (q.v.).

2 vols. demy 4to. Vol. I, pp. I-XVIII, 1-466. Vol. II, tit., pp. 467-920. London.

A systematic catalogue of the birds of the world, based on the author's "General Synopsis of Birds," 1781-85 (q.v.), and the first "Supplement" thereto, 1787 (q.v.). It contains Latin diagnoses of the species, genera and higher groups and assigns binomial names to the species which, in the earlier works, were discussed under vernacular names. Synonymy, habitat and diagnostic notes, aside from the descriptions, are given for each species. Mathews (Birds of Australia, Suppl. 4, p. 75, 1925) states that it was acknowledged by the Philos. Soc., London, on Dec. 9. A "Supplementum Indicis Ornithologici" (q.v.) followed the present work in 1801 and supplied the same details for the "Supplement II," 1801 (q.v.), as are given herein for the original work and first "Supplement."

An edition, in German, of Latham's, "A General Synopsis of Birds," 1781-85, and the first "Supplement" thereto, 1787 (q.v.) (comprising Vols. I-III) and of the "Index Ornithologicus," 1790 (q.v.) (comprising Vol. IV). Much additional matter is added by the translator and editor, Bechstein. A large part of the addenda to Vol. I is added at the close of the volume (pp. 651-738 and pll. "Zus." 1 and 2) under the separate title-page, "Anhang zum ersten Bande," etc.; the additions to the other volumes are scattered through the text. The plates, for the most part, are reproductions of those in Latham's original work. Pts. I and II of Vol. IV contain additional title-pages lettered, "Kurze Uebersicht aller bekannten Vögel," etc., which, for convenience, are transcribed under that title (q.v., 1811-12). Engelmann cites a complete index to Bechstein's edition by Joh. Gtfr. von Rademacher, published in 1813.

1 vol. medium folio, tit., 1 l. (pref.), pp. 1-38. Halle.

A systematic list of oriental or near-oriental animals with their Latin binomial names, mostly copied from the second edition of Pennant's "Indian Zoology," 1791 (q.v.), and published here as an extract (with additional title-page) from Forster's "Indische Zoologie . . . Zweite Auflage," 1795. The history of the publication is as follows. In 1769 Pennant published (in English and French) his "Indian Zoology," which was left more or less incomplete. His materials were turned over to Forster who, in 1781, published his "Zoologia Indica" or

"Indische Zoologie" (in Latin and German),—a translation of Pennant's work with the addition of three more plates (supplied by Pennant), the descriptions of the three birds and two fishes figured thereon, and other matter left unfinished or not supplied by Pennant, including a brief 'faunula' or list of Indian animals. In 1791, Pennant issued a second edition of his own work, consisting of a reprint of his first edition and an English translation (not strictly literal as regards descriptions of species) of the additions made by Forster, and with the further addition of "The Indian Faunula" entirely rewritten and enlarged by Latham and Davies (Davies being the author of the ornithology in it). In 1795, Forster published a reprint of his first translation, to which he added "The Indian Faunula" of Latham and Davies with certain additions of his own, and, the same year, issued this portion separately, with added title-page, as collated above. The original list published in Pennant's work (1791), contained English names for the mammals and birds but Latin names for the rest of the animals. The revised list in Forster (1795) contains Latin names throughout but is credited by Forster to Latham and Davies except for the additional species which he credits to himself. Presumably the ornithological portion remains the work of Davies in so far as it retains the species of the old list. The ornithological additions by Forster are not always easily discernible, but in most cases Davies's names may be recognized as the Latin forms of the English terms used in Pennant, and, by elimination, the new names may be recognized. 1 vol. demy 4to, illum. tit., pp. 1-376, 271*-272*, 10 ll. (index and direct. for pll.), pll. CXX-CXL, CXXXVI* and CXXXVIII* (col.). London.

A second supplement to the author's "General Synopsis," 1781-85 (q.v.), listing all the species treated in the original work, in the first "Supplement" and in the present work, revising the former discussions where necessary, and adding some new species. Consecutive numbering of species and plates follows that of the earlier volumes. The "Supplementum Indicis Ornithologici," 1801 (q.v.), including the species in this volume only, is bound with the present volume and may have been issued with it. The date of the present volume is somewhat in doubt. The present copy is dated "MDCCCI" as quoted above, but Engelmann cites "1802," while Mullens & Swann note "MDCCCI," adding that the last numeral appears to have been added after the work was printed. All the plates in the "Supplement II" bear the legend, "Published as the Act directs May 30, 1801, by Leigh, Sotheby & Son, York Street, Covent Garden." This volume was issued directly by the publishers to whom Latham disposed of his manuscript, whereas in the earlier volumes the author retained ownership until just prior to the publication of the present work (Cf. Latham, *General History of Birds* 1, p. VI.). The impression of the present volume was reduced to 250 copies.

A supplement to the "Index Ornithologicus," 1790 (q.v.), presenting a similar index for the "Supplement II to the General Synopsis," 1801 (q.v.). The date of publication is given on the title as "M,DCCC,I," quoted above, but Engelmann gives "1802" and Mullens and Swann include it with the "Supplement II" under date of "MDCCCII," with a notation as to apparent alteration of figures after printing (Cf. antea, Latham, Supplement II, 1801.).

The two parts constituting Vol. IV, Pts. I and II, of Bechstein's edition of Latham's "General Synopsis of Birds" (Cf. Latham, Johann Lathams allgemeine Uebersicht der Vögel, 1793-1812.) and issued also under the present title. Both titles are given in this volume which is collated under the general work.

A new edition of the author's "General Synopsis of Birds," 1781-85 (q.v.), rewritten and enlarged to include the species treated in the two supplements to that work as well as forms discovered since their publication. The nomenclature is vernacular except for the scientific names mentioned in the synonymy, and the new species described in the work were left for later authors to name. Most of the plates present the same figures of birds as are given in the earlier work; some of them are new. The "Index," in the present copy is bound in, intact, at the close of Vol. X, but it was issued in such form as to be divided into sections, if so desired, with the index to each volume attached to its own letterpress.

Descriptions of 702 species of birds found by the author or recorded (erroneously or not) by other writers as occurring in South Africa; with original and compiled notes on habits, etc. A number of new species are described. A revised edition of the work was published under the same short title in 1875-84 (q.v.). P. L. Slater's copy, presented by the author.

A revised edition of Layard's "Birds of South Africa," published in Cape Town in 1867 (q.v.). The revised work eliminates the descriptions of genera and higher groups and the more detailed references included in the original work and consists of descriptions of the species with accounts of the habits and distribution of each. The work appeared in 6 parts as follows (from current reviews in the *Ibis*). Part I, pp. 1-80, pll. II and IX, May 1875; II, pp. 81-160, pll. XI and XII, Oct. 1875; III, pp. 161-240, pll. tematic list of species does not agree in all the details of nomenclature with the general text. The latter contains numerous descriptions of new species and genera. These are to be accredited to Sharpe who, as editor of the new edition, rewrote many parts of it and added much new matter.

A series of descriptions of new or noteworthy species and genera of animals, accompanied by hand-colored plates. The work is a continuation of Shaw and Nodder's "Naturalist's Miscellany." Vols. I and II were issued in parts, according to a statement in an advertisement at the close of Vol. III; Vol. III appears to have been issued entire. An examination of the signatures in Vols. I and II shows various places where there are less than four leaves to a signature, and, as these occur at more or less regular intervals, it seems probable that they mark the ends of the various parts. According to these marks, the following arrangement of parts is suggested. Vol. I; pp. 1-18, 19-28, 29-38, 39-48, 49-58, 59-70, 71-80, 81-92, 93-102, 103-114, 115-126, 127-138, 139-144 (indices and advt.). Vol. II; pp. 1-12, 13-28 (27-28 are blank), 29-44?, 45-60, 61-76?, 77-88, 89-100, 101-112, 113-124, 125-134, 135-144, 145-154, 4 ll. (indices, etc.). In Vol. II, pl. 80 was issued with the part containing p. 59 where there is a statement that the explanation of this plate will appear with the following number; it occurs on p. 61. It seems that five plates, in serial order, accompanied the first 12 parts of each volume. Pl. 1-4 (of Vol. I) are dated "Jany. 1814," 6-8, "Feby. 1814," 14, "March 1814." The final part of these first two volumes

probably came out the years after the dates on the respective subtitle-pages; in Vol. I, p. 144 is an advertisement of a work said to have been published on Jan. 1, 1815, and on the last page of Vol. II is a similar advertisement for a work which "was published" Jan. 1, 1815. Vol. III was planned to appear Jan. 1, 1817, according to a statement at the close of Vol. II.

There is only one full title-page for all three volumes.

1 vol. royal 8vo, pp. I-IV, "1-42, 1 l." London. "1816," 1882.

A catalogue of specimens giving the Latin and English names, sex, locality and donor. The matter is arranged as if on specimen labels, which fact, coupled with the exceeding rarity of the original book, has led to the belief that the work was printed for the express purpose of being cut into actual labels but that it was never published. For a long time, only one copy (that in the British Museum) was known, but another copy has come to light in the Academy of Natural Sciences of Philadelphia. This, together with the fact that the preface contains a statement to the effect that species not enumerated in the list are desiderata and will be acceptable (followed by a list of species not represented in the collection), seems to prove that the paper was actually published and distributed. There are no descriptions and the new specific names, used in the paper, are nomina nuda, but the generic names are tenable although some of them are antedated by Koch's "System der Baierischen Zoologie," published before July the same year (Cf. Richmond, Proc. U. S. Nat. Mus., 35, No. 1656, Dec. 16, 1908, p. 621, footn. a.). Leach's preface is dated August 30, 1816. The present copy is a reprint published by The Willughby Society (q.v.). A preface by Salvin gives a short review of the work.

A series of hand-colored lithographs, beautifully executed, without descriptive text. The work is noted for its artistic value combined with accuracy of portrayal. The work was issued in 12 parts, the contents of all, and the dates of some, of which Mathews (Austr. Av. Record **I**, pp. 23-24, 1912) has recorded from the original wrappers, as follows. The numbers (used for brevity to replace the names) are according to the list of plates on the last leaf of text in the volume. Part **I**, pll. 23 or 24, 33 and 31, Nov. 1, 1830; **II**, pll. 1, 42, 4 and 21 or 22, Nov. 1, 1830; **III**, pll. 26, 9 and 30, Jan. 1, 1831; **IV**, pll. 20, 10, 2 and 25, Febr. 1, 1831; **V**, pll. 18, 15 or 14 and 12, May 1, 1831; **VI**, pll. 17, 13, 5 and 38, Aug. 1, 1831; **VII**, pll. 37, 36 and 11, Sept. 1, 1831; **VIII**, pll. 27, 29 and 34, Oct. 1, 1831; **IX**, pll. 7, 40, 3 and 41, no date; **X**, pll. 35, 16, 39 and 14 or 15, no date; **XI**, pll. 8, 24 or 23 and 32, no date; **XII**, pll. 19, 6, 28 and 22 or 21, with title-page (and probably remainder of text?), no date except date on title-page, "1832." Dubious numbers in the above list are due to separate plates of the same species, not segregated by Mathews.

A series of splendid, full-page photogravures showing the nests and nesting sites of some 122 species of British birds. The text consists of a general discussion of the habits of each species with descriptions of the subjects of each plate and the circumstances under which the photograph was taken. The book was issued in 16 parts of 10 plates each, -Pt. I in 1896, II-VII in 1897, VIII-XII in 1898, and XIII-XVI in 1899. The author's ill health prevented the completion of the work.

1 vol. superroyal 8vo, (15 orig. wrappers), 136 pll. (col.). Paris and London.

A series of hand-colored lithographs (numbered 1-136 by hand), without text other than the legends which contain the common and scientific names of the species quoted from Temminck, Gould, Naumann and Bonaparte. One plate is devoted to each species and several varieties of coloration are often figured. Some of the plates are moderately good but others are very poorly executed. Seventeen parts, of eight plates each, are present and appear to comprise all published. There is no title except that on the original wrappers as transcribed above. The cover of Pt. 1 is placed in the front of the volume in lieu of a title-page; the remaining covers are bound together at the close. These wrappers are identical except for the hand-written number and are dated 1844. One wrapper is numbered "4-6" and one, "8-10"; the remainder each bear a single number. The third page of each contains a statement to the effect that the work was supposed to appear monthly. The Zool. Soc., London, catalogues a copy with a French title, dated 1848; I can find no other references.

1 vol. in 2 vols., royal 4to, pp. I-XLVI, 1-2 (list of orig. subsers.), 1-4 (subser. list), 1-345+1, 345 (*bis*)-1237, frontisp. (col. map), 1 pl. (uncol.), 34 pll. (col.; by J. G. Keulemans; numbered I-XXXIV in list of pll.), 11 woodcuts (32 figs.). London.

A complete monograph of the birds of Ceylon. Issued in 3 parts as follows, according to a list on pp. XLV and XLVI of the work. Part I, pp. 1-345, 10 pll. (I, II, IV-VII, X-XII, XIV), November 1878; II, pp. 345 (*bis*)-730, 10 pll. (III, VIII, IX, XIII, XV, XVII-XIX, XXI, XXII), September 1879; III, pp. 731-1237, introd. pp. (except orig. list. of subsers.), 14 pll. (XX, XXIII-XXXIV, frontisp., uncol. pl.), September 1880. Page 345 (*bis*) contains a reprint of the 13 lines of text on p. 345 and the continuation from that point.

The hand-colored plates are very fine. The present copy is bound in two volumes, the first of which contains introductory matter and pp. 1-692, frontisp., uncol. pl. and 29 col. pll.; the second volume completes the work.

Critical notes on some of the birds discussed by Johann Matthäus Bechstein in his "Gemeinnützige Naturgeschichte Deutschlands; Zweyte Ausgabe," 1801-1809 (q.v.), and related species. Several new species are described. The work was planned to be considerably more comprehensive, with four parts to constitute each volume, but only the two parts here collated were issued.

Brief descriptions of a number of representative species of non-European birds, illustrated by hand-colored engravings. Latin names are given to most of the species treated. The work forms the second volume of the first edition of the "Bibliothèque Zoologique," of which the second edition appeared in 1846. A third edition, by Prévost and Lemaire was published in 1863. A companion volume, in all three editions, is entitled, "Hist. Nat. des Ois. d'Europe" (q.v., under Prévost and Lemaire, 1864).

A general treatise on the birds of the world, with tables for the determination of genera and higher groups and descriptions of typical species. The covering title, "Les Trois Règnes de la Nature" includes at least one other work by the same author, a treatise on botany dated 1851; the third section of the subject would, presumably, be geological, but I can find no trace of its publication.

A descriptive account of the species of the birds of Cuba, with synonymies and notes on habits, distribution, etc. A catalogue of the species known from Cuba is given on pp. 127-136. As this list is brought to date of October 1850, the work must have been published during, or after, October of that year. It is considered a great rarity. Many of the descriptions were supplied by Juan Gundlach (Cf. Gundlach, *Contr. Orn. Cubana*, p. 15, 1876.). The copy at hand was presented by the author to Srta. Bina Heffenone.

Brief characterizations of the genera and higher groups of birds and the principal species of each genus, prefaced by a resumé of the systems of classification adopted by a number of antecedent authors. The work formed one of a large series of manuals issued by the publishers. An atlas containing 129 plates was issued, uniform with the present volumes. Mathews (*Birds of Austr.*, 7, p. 456) states that the work was acknowledged by the "B.F." (=Bibliographie de la France) as received June 28, 1828. A review of the genotypes in this work was given by Laubmann in the *Archiv für Naturgeschichte*, 85 Jahrg., 1919, Abt. A., 4, pp. 137-168, Aug. 1920.

The first of a series of three volumes dealing with the hummingbirds. The present volume was succeeded by the "*Histoire Naturelles des Colibris*," 1830-32 (q.v.), and "*Les Trochilidées*," 1832-33 (q.v.). The date of publication of the present volume is somewhat in doubt. Coues asserts that the work began in January 1829 and ended in September 1829, but Giebel, Engelmann, Agassiz, the Zoological Society of London, the Library of the British Museum (Natural History), and others, cite 1829-30. Cuvier in the second edition of "*Le Règne Animal*," Vol. III, p. 385, 1830 (preface to volume dated March 1830), remarks that the work in question was then in course of publication. The Catalogue of the Library of the British Museum (Natural History), quoting the "*Bibliographie de la France*" assigns livrs. 1-10 to the year 1829 and the remainder of the volume to 1830. Sherborn (*Index Animalium*, Sect. 2, Pt. 1, p. LXXX, 1922) says, "pp. 1-144, pls. I-XL, 1829; 145-224, XLI-XLVI, 1830."

The work was issued in 17 livraisons and the signatures are as follows. Preliminary matter, 4 ll. (without sign.), the preface dated Jan. 10, 1829; signs. "b" and "c", table of species, dated May 1829; sign. "d," completion of table and a supplement thereto which is dated September 1829; signs. 1-12, general text; 2 ll. (without sign.), index. In the present copy, this volume and the one on "Des Colibris" are divided and bound with the text to both in one volume and the plates in a second volume. A third volume in uniform binding consists of the author's "Histoire Naturelle des Oiseaux de Paradis et des Epimaques," 1834-35, (q.v.), text and plates. The volume of plates in the present copy is prefaced by the front wrapper of Livraison 17 of the present title, which bears the following inscription surrounded by a broad, figured border. "Histoire naturelle | des | Oiseaux-Mouches, | par R. P. Lesson, | auteur | de la zoologie du voyage autour du monde, etc.; | dédiée | A S.A.R. Mademoiselle. | 17 Livraison. | et Dernière | [*Monogram*.] | Paris. | Arthus Bertrand, Libraire-Éditeur, | Rue Hautefeuille, No. 23. | Imprimerie de Rignoux, Rue des Francs-Bourgeois-S-Michel, No. 8. | 1829." The figures and words "17e" and "et Dernière" are written by hand, which suggests that the same wrappers were used throughout the publication, with numbers added as required, in which case the date printed below would not present conclusive evidence as to date of publication.

- 2 vols. 8vo. Vol. (I), pp. J-XXXIJ, 1-659. Vol. (II), pp. J-XIJ, pll. 1-119 (col.; by Prêtre). Paris.

A descriptive catalogue of birds, with a synoptic list of genera and higher groups and with diagnoses and synonymies following in the main text; illustrated by hand-colored plates. The work was published in 8 livraisons, regarding whose dates of publication there is considerable doubt. Mathews (Novit. Zool. 18, p. 14, 1911) quotes, from the "Bibliothèque Française," (=Bibliographie de la France) the dates of receipt of the various livraisons as follows. Livr. 1, Feb. 13, 1830; 2, May 8, 1830; 3, July 10, 1830; 4, Sept. 25, 1830; 5, ?; 6, about March 1, 1831; 7, April 9, 1831; 8, June 11, 1831. Livrs. 1-4 and 7-8 are accredited with 5 sheets of text each, livr. 1 with no plates, 2 with 30 pll., 3-4 and 7-8 with 15 pll. each, but this arrangement does not account for all the letterpress and allows one plate over the number published (assuming that livrs. 5 and 6 were similar to the adjacent numbers). In the "Revue Zoologique," 1848, pp. 39-48, Lafresnaye refers a number of times to the "Traité d'Ornithologie" which he says was published in 8 livraisons from November 1828 to November

1830, but this statement is not supported by any other reference I can find. Mathews (l.c.) assigns certain pages to the various parts, but he does not account for the prefatory matter (pp. I-XXXIJ) which includes the title dated 1831 and the preface dated November 1830. Furthermore, since the *Bibliographie de la France* apparently omits all mention of Livr. 5, the contents of this and the succeeding parts are uncertain.

1 vol. in 2 vols. (pt.) 8vo, pp. I-X, 1-196, pll. 1-25, 12 bis and 13 bis (Colibr.), 1-39 (Suppl. Ois.-Mouches) (=66 pll.; col.; by Prêtre and Bévalet). Paris.

A continuation of the author's "Hist. Nat. des Oiseaux-Mouches," 1829-30 (q.v.), with a supplement to the earlier volume. The pagination is continuous in this volume but the plates are numbered separately for the Colibris and for the Suppl. Ois.-Mouch. There is a question as to the dates of publication. Most authors and bibliographers quote 1830-31, both dates appearing in the text, and a notice by the editor on p. II of "Les Trochilidées," 1832-33 (q.v.), states that the present work completed its publication in December 1831. The Catalogue of the Library of the British Museum (Natural History), quoting the "Bibliographie de la France," assigns Livrs. 1-3 to 1830; 4-12, 1831; and 13, 1832; with plates issued in the first 12 parts only. The signatures are as follows. Titles and ded., 3 ll. (no sign.); 2 ll. preface (no sign.); signs. 1-12, text; 2 ll. (no sign.), index¹. This title was followed by the work entitled "Les Trochilidées," 1832-33 (q.v.), and was reissued in 1847. A second copy in the Ayer Ornithological Library is bound in one volume.

¹The index and the preface are on the same quality of paper; the 3 pr. ll. (titles and ded.) are on a different quality, indicating that these may have been issued at different times.

The concluding volume of the series relating to the hummingbirds (Cf. "Histoire Naturelle des Oiseux-Mouches," 1829-30, and "Hist. Nat. des Colibris," 1830-32.). The general text is of the same nature as that of the preceding volumes. Following it, on pp. J-XLIIJ, is given a general synoptic index to all the hummingbirds, with short diagnoses and some synonymy of the species and higher groups. This is separately titled, as follows. "Index | général et synoptique | des oiseaux | du | genre Trochilus, | Par R. P. Lesson. | Paris. | Arthus Bertrand, Libraire, | éditeur du voyage autour du monde par le Capitaine Duperrey, | Rue Hautefeuille, No. 23. | M DCCC XXXII." There is a difference of authorities as to dates of publication. The work was issued in 14 livraisons. Engelmann gives 1832-33 as dates of issue; Coues cites only 1832; the Library of the British Museum (Natural History), quoting from the "Bibliographie de la France," assigns Livrs. 1-7 to 1832 and the rest of the book to 1833; the title-page of the "Index" in the work in question bears the date 1832 (probably in the 11th or 12th livr.), while the author's preface is dated December 1831. The signatures are as follows. Half-tit. and tit. (2 ll.), no sign.; sign. "a" (2 ll.), ed. notice and pref.; signs. 1-11 (4), text; 2 ll., no sign., table; signs. "a", "f" (2) (4 ll. to each sign. except in "f"), "Index." Sherborn (Index Animalium, Sect. 2, Pt. 1, p. LXXX, 1922) says "Pp. 1-112, 1832; 113-172, & pls. I-XLIII, 1833."

1 vol. royal 8vo, 4 pr. ll. (half-tit., tit. and pref.), 103 ll., pll. 1-60 (col.; by Prêtre, Bessa, Bévalet and Lesson; 40 of birds). Paris.

Descriptive accounts and colored plates of new genera and species of animals, Pl. 1, 4, 5, 9, 11, 13, 16, 18, 20, 23, 25, 28, 29, 31, 45, 46, 49, 50, 52 and 60 are of birds. The work was issued in 20 livraisons of 3 pll. each. Many of the contributions are dated, but the dates are those of preparation, not of publication. Mathews (Novit. Zool., 18, p. 12, 1911) quotes the following dates from the "Bibliothèque Française" (=Bibliographie de la France). Livr. 1, July 14, 1832; 2, Sept. 1, 1832; 3, Oct. 13, 1832; 4, Nov. 3, 1832; 5, Dec. 1, 1832; 6, Febr. 23, 1833; 7, April 13, 1833; 8, Aug. 10, 1833; 9, Aug. 24, 1833; 10, Oct. 19, 1833; 11, Dec. 21, 1833; 12, March 22, 1834; 13, May 17, 1834; 14, Aug. 2, 1834; 15, Jan. 17, 1835. Livrs. 17 and 20, according to Mathews (l. c.), are cited in the Comptes Rendus for Dec. 1835, p. 517; therefore, Livrs. 16-20 will date 1835. Sherborn (Index Animalium, Sect. 2, Pt. 1, p. LXXX, 1922) says, "pls. 1-15, 1832; 16-33, 1833; 34-42, 1834; 43-60, 1835."

A monograph of the Birds of Paradise. The work is divided into several sections,—a synopsis of species with scientific descriptions and synonymies, (pp. 1-34), introduction (pp. 1-7), a description of New Guinea and its inhabitants (pp. 9-107), the general treatment of each of the species (pp. 109-237), synonymic index (pp. 239-244), tables of plates and subject matter (pp. 245-248). The work was issued in livraisons and is usually cited as published entirely in 1835¹, but the Catalogue of the Library of the British Museum (Natural History), quoting the "Bibliographie de la France" states that Livrs. 1-4, embracing 4 sheets (8 ll.) of text and 16 pll., appeared in 1834. Sherborn (Index Animalium, Sect. 2, Pt. 1, p. LXXX, 1922) adds, "Prob. in 16 pts. of which 1-4, pp. 1-64, 1834; 5-7, 65-112, 1835."

A narrative of the voyage of La Coquille during the years, 1822-25. Numerous notes on natural history are scattered through the text and colored plates of some of the birds and mammals are given together with other illustrations. The official report was published some years earlier by Louis I. Duperrey, the ornithology being supplied by Lesson and Garnot (Cf. Duperrey, *Voyage autour du monde—sur—La Coquille*, 1826-30.).

A reprint of Lesson's ornithological writings from the "Echo du Monde Savant" of 1842 and 1845, with original pagination noted in place; edited by A. Ménégaux. The work is important owing to the rarity of the originals.

An account of the birds of Africa (not always strictly defined), classified under vernacular names. The plates are engravings, printed in colors and afterwards retouched by hand. The first edition, in 4to, was issued in 51 livraisons from 1796 to 1812 and the present edition is ascribed to the same period by the "Catalogue of the Library of the British Museum (Natural History)," although the title-pages present only the dates 1805 to 1808 as in the above transcription. Aside from the change from 4to to folio, I do not know what differences exist in the two editions. A continuation of the work was contemplated by Levaillant [Cf. Cat. Libr. Brit. Mus. (Nat. Hist.)] but was not produced. Ostensibly based on the author's personal observations and collections in southern Africa, the book is a monument of deception. An infinity of detail is given of the habits of the various species and of the circumstances under which the specimens described or figured were secured by the author in Africa, but many of these species do not inhabit any part of that continent. Some of the specimens thus claimed to have been taken personally, have proved to be artifacts. Errors of previous authors have been perpetuated, with an added element of personality given by Levaillant who cites exact data for his supposed specimens. A careful review of the work is given by Sundevall in the second part of his "Kritisk

Framställning af Fogelarterna uti Äldre Ornithologiska Arbeten" published in the Kon. Vet. Akad. Hand., Bd. 2, No. 3, 1857.

A work intended to supplement the "Hist. Nat. des Oiseaux d'Afrique" (q.v.) by describing and figuring birds not properly included in that work. One volume, only, was published which consists of monographs of the Bucerotidae and the Cotingidae, with 49 of the proposed 240 plates. The work was continued under a separate title (Cf. Levaillant, *Histoire Naturelle des Oiseaux de Paradis*, etc.). The present volume was issued in 8 parts of which 1-4 appeared in 1801 and 5-8 in 1802 (Cat. Libr. Brit. Mus. [Nat. Hist.]), but I am uncertain as to the division of parts. The Bucerotidae are treated on pp. 1-51 and pll. 1-24, and the Cotingidae on pp. 53-110 and pll. 25-49, an arrangement which divides the volume into two nearly equal parts. The plates are duplicated, one of each being colored and one plain. The former are printed in colors and retouched by hand. No scientific nomenclature is used in the text.

A monograph of the parrots, illustrated by engraved plates printed in colors and retouched by hand. The work was issued in 24 livraisons for which the following dates are given by the Cat. Libr. Brit. Mus. (Nat. Hist.), without information concerning the extent of each livraison. Livrs. 1-2, 1801; 4-8, 1802; 10-16, 1803; 17-20, 1804; 22-24, 1805. A supplementary volume was issued by Bourjot Saint-Hilaire in 1837-38 under the same title as above. "troisième volume" (q.v.), and in 1857-58, Charles de Souancé added an additional volume under the title of "Iconographie des Perroquets" (q.v.). No scientific nomenclature is used in the present work.

A work which may be considered as a continuation of the author's "Hist. Nat. d'une partie d'Oiseaux Nouveaux," etc., 1801-02 (q.v.). It consists of a similar series of monographs on groups not always coinciding with modern ones, as follows. Vol. I:-Introduct., pp. 1-7; Ois. de Paradis, pp. 9-68, pll. 1-24; Rolliers, pp. 69-115, pll. 25-39; Geais, pp. 117-153, pll. 40-56. Vol. II:-Introduct. pp. 1-6; Toucans, pp. 7-46, pll. 1-18; Barbus, pp. 47-89, pll. 18 (*bis*, = 19), 20-38; Barbus Tamatias, pp. 91-100, pll. 39-43; Barbacous, pp. 101-106, pll. 44-46; Jacamars, pp. 109 (= 107), 108-126, pll. 47-54; suppl. to Barbus, pp. 127-133, pll. 55-57. A third volume in two parts, each with separate pagination and numbering of plates, and with title altered to "Hist. Nat. des Promerops et des Guépriers," including a supplement to the two volumes here collated, was issued in sequence after the present numbers, forming livraisons 20-33. This portion is lacking from the set examined. An indication of this work may be found on p. 1 of Vol. I of the present set, where a half-title includes "des Promerops" among the subjects mentioned. A covering title is said [Cat. Libr. Brit. Mus. (Nat. Hist.)] to have been issued for the three volumes. The same authority quotes the following dates of publication for Livrs. 1-14, without assigning pagination for them. Livrs. 1 and 2, 1801; 3-5, 1802; 6-12, 1803; 13-14, 1804; 15-19, not cited. The dates are not important since only vernacular names are used in the text. The plates are printed in colors and retouched by hand.

A collection of etched drawings of birds of New South Wales, accompanied by a brief description of each species, without scientific nomenclature. The work constitutes a third edition of the "Birds of New Holland," etc., published in 1808, with the addition of 8 new plates (pll. VII and XIX-XXV). The second edition, published in Sydney in 1813, was entitled "Birds of New South Wales." A "new and improved edition" (q.v.), under the same title as the present one, was issued in 1838. The present edition exists, also, with colored plates [Cf. Cat. Libr. Brit. Mus. (Nat. Hist.)].

The second edition of the work first published in 1789-94. The text, in both English and French, embraces a short description of each species and an account of its habits. The plates are rather poor. Pl. 15 seems not to have been published. As bound, Vols. I-IV are in one volume; V-VIII in the second.

A catalogue of a collection of mammals and birds to be sold by auction at Hamburg, with descriptions of many new species (some of which have not since been identified) and notes on all of them. The preface, signed by Lichtenstein, is dated Sept. 1, 1793. The present copy is a reprint (in increased size) of the original, published by The Willughby Society (q.v.). The preface by the editor contains a brief notice regarding the author.

Another reprint of this paper, edited by F. D. Godman, was issued by the Willughby Society the same year (q.v.).

The nature of the work is identical with that of the same title, edited by W. B. Tegetmeier, published the same year also by the Willughby Society (q.v.). The details of the two reprints are not identical, as will be shown hereunder.

The prefaces of the two editions vary in the details given of the life of Lichtenstein and differ noticeably in their summaries of the new species contained in the succeeding pages. Tegetmeier lists but 36 new species; Godman gives the number as 38, including, properly, No. 362 (*Columba assimilis*) and No. 500 (*Turdus macrourus*) which are not mentioned by Tegetmeier.

Tegetmeier calls his edition "a literal reprint (the orthographical and typographical errors being intentionally reproduced)" "line for line and letter for letter" from the copy in the Banksian Library, British Museum; Godman says his edition is "reproduced *literatim et verbatim*" from the copy in the Library of the British Museum. In spite of this fact, differences occur throughout, beginning with the reprinted title-page, lines 4, 8, 9, 10, 14, 15, 17, 18, 19, 20, 21, 26, 29, 30 and 31. A common source of difference in the later pages is in the diphthongs 'æ' and 'œ' which are interpreted in one form by Tegetmeier and exactly the opposite by Godman. The other differences are too numerous to mention. However, it is obviously impossible that both editions can be exact reprints of the same copy.

There is no published evidence which I can find to explain the reason for the two editions. Godman's issue was printed by Taylor and Francis, and Tegetmeier's by Horace Cox, but since both firms were employed in the printing of other of the Willughby reprints, no light is thrown on the possible unauthenticity of either edition. The Catalogue of the Library of the British Museum (Natural History), The Zoological Record for 1882, and the Catalogue of the Library of the Zoological Society of London mention only Godman's reprint. There is no current review in the *Ibis*. The advertising pages at the close of each copy list that particular edition among the regular publications of the Society but say nothing of another edition. A possible solution of the puzzle is suggested by the advertising pages of the reprint of "Wagler's six ornithological memoirs from the *Isis*," 1884 (q.v.). In these there appears a statement, signed by Godman as Secretary of the Society, that there had been considerable delay in the publication of some of the numbers, on account of which the Committee had made a change in regard to editorial supervision which it was hoped would obviate further difficulties of this nature. The present paper was among those which had been delayed since it was due in 1880, and Tegetmeier was Director of the Society!

1 vol. 8vo, pp. I-VIII, 1-123. Berlin.

A hand-list of the specimens of birds in the Berlin Museum, giving the distribution of each species, the number of specimens at hand and, in some cases, the price at which duplicates will be sold. The list seems to have been published by Lichtenstein whose name is signed to the preface although acknowledgments are made (p. VI) for a certain amount of assistance rendered by Cabanis. Some confusion exists in the fact that Lichtenstein quotes his own genera as "Licht." and those of Cabanis as "Nob." but the arrangement of species is not entirely that followed by Cabanis, and the latter author, in his "Museum Heineanum," 1850-63 (q.v.), cites the present work as of Lichtenstein, so Cabanis, probably, is not to be quoted under the present title. Many of the names used elsewhere by Cabanis, and first published by him, were taken from specimens in the Berlin Museum labelled in the first place by Lichtenstein, so the names characterized as "Nob" in the "Nomenclator" may have been originated by Lichtenstein, although published first by Cabanis. The "Nomenclator" is useful, principally, for the definite localities given for the species, many of which were described elsewhere, without such exact information, from the specimens listed herein.

[Extra volume contains title (without vol. no.), duplicate index (pp. 149-170 of Vol. VII), and original wrappers of Pts. I-XXXVI.] London.

A short account of each of the British birds and its habits, preceded by a brief synonymy and illustrated by colored plates (chromolith.). Most of the plates are by Thorburn and Keulemans; a few are by G. E. Lodge and W. Foster. The first edition was begun in Oct. 1885 and issued in parts. The second edition, also in parts, commenced in April 1891 (at the time Pt. XVIII, first ed., appeared) and overtook the first edition in Sept. 1894 with the issue of Pt. XXVIII, after which the same parts of both editions appeared simultaneously until the completion of the work. The editions are said to be identical except

in Pts. VII-XVII in which various improvements were made in the second issue. The work was incomplete at the time of Lord Lilford's death and was then taken in hand by Osbert Salvin (as explained in a note on pp. XXIII-XXIV of Vol. I) who produced Pts. XXXIV-XXXVI. The original wrappers of the second edition bear the following dates. Pts. I-IV, April 1891; V-VI, June 1891; VII, July 1891; VIII, Aug. 1891; IX, Oct. 1891; X, Dec. 1891; XI, Febr. 1892; XII, May 1892; XIII, June 1892; XIV, July 1892; XV, Aug. 1892; XVI-XVII, Nov. 1892; XVIII, Dec. 1892; XIX, Feb. 1893; XX, March 1893; XXI, May 1893; XXII, June 1893; XXIII, July 1893; XXIV, Oct. 1893; XXV, Nov. 1893; XXVI, Dec. 1893; XXVII, Aug. 1894; XXVIII, Sept. 1894; XXIX, Nov. 1894; XXX, Febr. 1895; XXXI, June 1895; XXXII, April 1896; XXXIII, Nov. 1896; XXXIV, April 1897; XXXV, Nov. 1897; XXXVI, [N.d., Jan. 1898 (Mullens & Swann).] The concluding part appears to have contained the full text for the complete work, the frontispiece, the title-pages and all prefatory matter for each volume, and the general index.

Collations of both editions, showing the various species and the number and date of the part in which the plate of each appeared, are given in Vol. I, pp. XXV-XXVI, Vol. II, pp. V-VI and Vol. III, pp. V-VI.

A detailed account of the author's personal observations on the habits of a large number of birds of Northamptonshire, England, and outlying regions. Many of the notes are reprinted from the "Journal of the Northamptonshire Natural History Society," according to a statement by the author in his preface. A large paper edition of 100 copies was issued the same year.

1 vol. crown 8vo, 14 pr. ll., pp. 1-411, frontisp., pll. I-II (fold.; by I. Leche). Stockholm.

The first edition of Linné's work on the zoology of Sweden, with detailed descriptions of most of the species. The occasional binary terms are not accepted binomials since the work precedes the 10th edition of the author's 'Systema Naturæ.' The second edition of the present work (q.v.) published in 1761, made use of binomials. In the present edition the birds occupy pp. 16-93.

1 vol. in 2 vols., 24 pr. ll., pp. 1-578 (interleaved), frontisp., pll. I-II (fold.; by I. Leche). Stockholm.

A revised and enlarged edition of the author's work of the same title of 1746 (q.v.). Various species are added and the binomial nomenclature, consistently introduced by the author in the meanwhile, is here adopted. The birds are discussed on pp. 19-100. The margins and interpolated leaves are filled with manuscript annotations by a former owner of the copy. A third edition was issued in 1800.

Linné, Karl von.

1776. A | catalogue | of the | birds, beasts, fishes, insects, plants, &c. | contained in | Edwards's natural history, | in seven volumes, | with their Latin names | By Sir. C. Linnæus, | Medical and

Botanical Professor of the Royal Academy | at Upsal, &c. | London: | printed for J. Robson, bookseller, New Bond Street. | MDCCLXXVI.

1 vol. crown folio, pp. 1-15, 1 p. (advt.). London.

A list of the species figured in the "Natural History of Uncommon Birds" and "Gleanings of Natural History" (q.v.) by Edwards, with Latin binomials applied by Linné. This work was prepared by Linné after Edwards's death and appears to have been published by Robson for inclusion in copies of Edwards's work since a notice on p. 15 gives directions for its insertion in copies of the latter. The paper on "Some Memoirs of the Life and Works of George Edwards" (probably by Robson, q.v.) was issued the same year as the present brochure, and in the copy at hand is included in the same wrapper. A second copy of this catalogue is bound with Pt. III of the second edition of Edwards's "Gleanings."

Linné, Karl von. (Gmelin, Johann Friedrich; Turton, William.)

1802. A general | system of nature, | through the | three grand kingdoms | of | Animals, Vegetables, and Minerals; | systematically divided | into their several | classes, orders, genera, species, and varieties, | with their | habitations, manners, economy, structure, | and peculiarities. | Translated from Gmelin's last Edition of the celebrated | *Systema Naturæ*, | by Sir Charles Linné: [*Period instead of colon (Vols. II and III.).*] | Amended and enlarged by the improvements and | discoveries of later naturalists and societies, | With appropriate Copper-plates, | by William Turton, M.D. | author of *The Medical Glossary*. | Vol. I [-IV]. | [*Quot., 4 lines.*]. | London: | printed for Lackington, Allen and Co. Temple of the | Muses, Finsbury-Square; | sold also by Mr. Cooke, and Messrs. Hanwell and Parker, | Oxford; Mr. Deighton, Cambridge; Mr. Archer, Dublin; and Messrs. Mundell and Son, Edinburgh. | 1802.

4 vols. post 8vo. Vol. I, pp. I-VII+1, 1-943+1, 2 pll. (1 of birds). Vol. II, pp. 1-717+1+1 l., 1 pl. Vol. III, pp. 1-784. Vol. IV, pp. 1-727. London. (1800?) 1802.

Turton's translation of the 13th edition of Linné's "*Systema Naturæ*" which was published by Gmelin in 1788-93. The ornithology occupies pp. 131-637 of Vol. I, and one plate. Vol. I was printed in 1800 and III in 1801, according to a statement in the colophon of each, but actual publication, judging by the date on the title-pages, appears to have been reserved until completion of the four volumes. These four volumes are complete for zoology but embrace only that subject. Three additional volumes on the remaining subjects of natural history were published subsequently with a reissue of the present four which were then supplied with new title-pages, making the complete set of seven volumes. The present set, however, is to be quoted separately. Engelmann confuses the two editions and cites colored plates.

1 vol. 8vo, 2 pr. ll. (half-tit. and tit.), pp. III-XVIII, 1-242, 42 pll. Launceston.

An account of the birds of Tasmania and dependencies, with descriptions of the various plumages and of the nest and eggs, a statement of the breeding season and geographical distribution, and a paragraph of observations on each species.

Lloyd, Llewellyn.

1867. **The | game birds and wild fowl | of | Sweden and Norway; |** with | an account of the seals and salt-water fishes | of those countries. | By L. Lloyd, | author of [*etc.*, 2 lines.]. | **Second edition,** | With Map, Woodcuts, and Chromo Illustrations. | London: | Frederick Warne and Co. | Bedford Street, Covent Garden. | 1867. | [All rights reserved.].

1 vol. superroyal 8vo, pp. I-XX, 1-599, 52 pll. (48 col.; by M. Körner; W. von Wright and J. Wolf), 61 text-cuts (74 figs.), 1 map (fold.). London.

A popular treatment of the subject, including voluminous notes on methods of hunting and capturing the animals discussed. Most of the book is ornithological. Pages 1-371, 36 plates (33 col. and 3 plain) and 47 text-cuts (58 figs.) relate to birds. The colored plates are chromo-lithographs; those by Körner are said (by the Zool Record) to be copied from Nilsson's "Skandinaviska Foglar." The first edition was issued earlier but in the same year as the present one. It is probably that which is catalogued by Taschenberg as published by Day & Son, London, 1867.

1 vol. demy 8vo, pp. J-XJ+1, 1-158. Paris.

A catalogue of the mammals and birds observed in Algeria by the author, with synonymy (scientific and local vernacular) and distribution of each species, and with references to specimens in the collection of the "Exposition." Supplementary lists record the species known from the region but not found by the author. The ornithology occupies pp. 33-158. No date is given on the title-page, but the preface is dated March 1, 1858. The present copy was autographed (on the wrapper) by the author in presentation to Louis Reichenbach, Dresden.

1 vol. royal 8vo, 2 pr. ll., pp. 1-96, 1 pl. (fold.). Upsala.

A transcript of an unpublished manuscript by Linné on the birds of Sweden, entitled, "Methodus Avium Sveticarum," with notes by Lönnberg. The original manuscript is said to have been in the form of a pocket notebook, interleaved with loose sheets containing additional matter of questionable date; the notebook carried a title-page bearing the date January 1, 1731.

A study of the Russian Black Cock, *Tetrao tetrix*, illustrated by large, hand-colored photogravures; published posthumously. I am unable to ascertain the degree of completeness of the present copy. The advertising sheets, noted in the

collation, announce that half of the 24 projected plates are presented with Lieferung I and that the remainder will appear in II and III, while a No. IV will be published if necessary to complete the work. The 24 plates are all present, but only Pt. I of the text, with 3 text-figures, is included while the prospectus calls for 4 parts of text and 50 figures. The set at hand is enclosed in an original wrapper of Lief. I, dated 1910.

1 vol. demy 4to, pp. I-XX, 1-230. Edinburgh.

Accounts of the habits and the local distribution and occurrence of the vertebrates of the Orkney and Shetland islands. The preface notes that the work was prepared by Low under the encouragement of Thomas Pennant but that it remained unpublished at the author's death in 1795. It states also that many of the notes were plagiarized by Rev. George Barry in his "History of Orkney," 1805, from the manuscript which was then in his possession. This manuscript, coming afterwards into Leach's hands, was edited and published as presented herewith.

1 vol. post 8vo, pp. I-XI+1, 1-220. London.

A thorough bibliography of the group Charadriiformes, prefaced by a discussion of several systems of classification of the group. The literature is tabulated under authors which are arranged by years under generic names, and the genera are placed in their respective families according to a scheme of classification given at the head of the family in question. Each of the families occupies a chapter. A list of general references and one of general literature on the group are placed in chapters I and II. The work is planned to carry the literature from the point where it was left by R. B. Sharpe in 1896, Vol. XXIV of the Catalogue of Birds in the British Museum (q.v.).

A complete natural history of the birds of Great Britain, written in great detail and containing a mass of information on the particulars of avian anatomy, as well as full accounts of the habits and characteristics of each of the species and a great deal of information of a general nature. The system of classification adopted by the author is unusual, but the general discussions and the anatomical descriptions are authoritative. Some of the remarks are attributed to notes presented by various correspondents and Vol. III contains two contributions definitely accredited to other authors. These are a "Catalogue of Land Birds of Leicestershire" by James Harley (pp. 646-664) and "Observations on the Song of Birds" by Archibald Hepburn (pp. 741-744).

A thorough monographic revision of the woodpeckers, illustrated with colored plates. The work was issued in 24 parts from 1859 to 1862 in an edition of 100 copies, printed at the author's expense. Pt. 1 is noticed in the *Ibis* for Oct. 1859, Pts. 2 and 3 (including *Hemilophus validus* and *Megapicus sclateri*) in the number for April 1860, and the 6th part in the number for Oct. 1860, but the extent of each part I am unable to ascertain. The plates, occupying Vols. III and IV, seem to have been issued along with the text in Vols. I and II. The work was reviewed and revised by Sundevall in 1866 in his "Conspectus Avium Picinarum" (q.v.).

A manual of the vertebrate fauna of the provinces Göteborgs and Bohusläns, Sweden. The ornithological matter is contained principally on pp. 24-49 (essays on vernacular names and migrations of birds), 60-93 (tables for determination), 161-364 (general discussion) and 645-647 (addenda). The author's dislike of

tautonymic names has led to the renaming of 28 species (of birds and many other animals), all of which are called "*Linnéi*." The book was issued in two parts, as indicated in the collation above, and is designated as a memorial of the one hundredth anniversary of the death of Linné on Jan. 10, 1778.

1 vol. cap 8vo, pp. I-VII+1, 1 l. (list of pll.), pp. 1-232, frontisp. (col.), pll. 1-14+ "3(*)" (col.). London.

A little work supplementing Jardine's "Natural History of Humming-birds," 1833 (q.v.) in the Naturalist's Library. According to Coues, the present work was issued as a later volume of that series. The volume is composed of a general discussion of hummingbirds and their habits (occupying rather more than half of the text) and descriptions of a considerable number of species not (with one exception) treated by Jardine. The plates are engravings, with the figures of the birds colored by hand but with the backgrounds uncolored. A curious error occurs on plates 4 and 8 on which the remiges and rectrices of the birds are shown imbricated in reverse order, the outer ones overlapping the inner!

A monograph of Australian birds, with detailed accounts of every species and group and a mass of information of a bibliographic nature scattered through the work. The book is being issued in parts and is not yet complete although the last volume is now in progress. The dates and details of publication of Vols. I-VII, *Pt. 4* are given in Vol. VII, pp. 458-459; the remainder up to Vol. XI, *Pt. 7* may be ascertained, by species, in the Check List and it is assumed that a complete collation will be given with the concluding number when it appears. The Check List is separately pagged and titled but forms an integral

part of the general work. It contains alterations and additions to the general text as made necessary by researches since the publication of the parts of the work concerned (except for portions of Pt. 3 which antedate the yet unpublished conclusion of Vol. XII). It also gives a resumé of the forms treated in the work, with references to original descriptions and to plates in Gould and the present work, and with notes on the distribution of the species. The Bibliography is explained by its title.

The colored plates are by J. G. Keulemans, H. Grönvold, H. Goodchild, G. E. Lodge and Roland Green and are very attractive. On pp. XV-XVIII of Vol. VI, (Dec. 11, 1917), Edwin Ashley presents a description of a new species.

Contains descriptions, synonymies and distributional notes on the species of Australian birds, with the subspecific divisions indicated by brief notes. The genera and higher groups are described and generic characters are illustrated in black-and white plates of exceptional merit. The colored plates are mostly illustrative of nestling plumages. A number of extra-Australian birds are described or renamed in the text. Volume I, alone, has appeared to date.

The first portion of the work is a taxidermist's manual. The second portion, pp. 81-170, contains an annotated list of the birds of eastern Massachusetts, with notes on the distribution and habits of the various species.

Maynard, Charles Johnson.

1881? The birds | of | eastern North America; | with | original descriptions | of all the species which occur | east of the Mississippi River, | between the | Arctic Circle and the Gulf of Mexico, | With Full Notes Upon Their Habits, Etc., | by | C. J. Maynard; | containing | thirty-two plates drawn on stone by the author. | **Revised edition.** | Newtonville, Mass: | C. J. Maynard & Co. | 1881.
 1 vol. medium 4to, pp. I-IV, 1-532, pll. I-XXXII. Newtonville.

The present work has a very involved history. In October 1872, the author commenced the publication of a book entitled "The Birds of Florida," issuing Pt. II in 1873 and Pt. III in January 1874. In May 1878, Pt. IV appeared with the title emended to "The Birds of Florida with the Water and Game Birds of Eastern North America." The work was thus continued until March 1879 when Pt. IX was published, carrying the work to p. 232 and pl. XVI, at which point this title and work were abandoned. In 1879 a new edition was begun under the present title which, however, was announced to contain only 30 plates. The Zool. Record states that Pts. I-VIII appeared in 1879 and IX-XIII in 1880, a statement supported by the review in the Auk for July 1880. The Catalogue of the Library of the British Museum (Natural History), confuses the original and the reissued works and catalogues Pts. I-III as having appeared in 1872-74, IV in 1878, IX-XV in 1879 and XVI in 1881, giving pagination and plate numbers for each part but remarking that pll. XXIX and XXX were not issued. The work at hand may constitute a third publication since it bears the inscription "Thirty-two plates . . . Revised edition . . . 1881" and contains the full number of plates. In view of the uncertainty, I have quoted it under the latter date, only. In the author's preface, dated 1879, (probably identical with that of the first reissue whether or not the present work is new), it is stated that the letterpress has been slightly altered from its form as published in "The Birds of Florida" and that the plates are entirely redrawn, but that the pagination remains unchanged from the original. Another revised edition (q.v.) was published in 1889-95.

Maynard, Charles Johnson.

1887. Illustrations and descriptions | of the | birds of the Bahamas. | By | Charles J. Maynard. | Boston: | C. J. Maynard and Company. | 1887.
 1 vol. (pt.) atlas folio, tit., 1 l. (expl. of pll.), pp. 1-2, pll. I and II (1 col.; II not numbered on pl.). Boston.

Apparently the only part issued of this work. A printed label on the cover is as follows. "Part I. | Illustrations and Descriptions | Birds of Bahama. | *Spindalis zena*, | Bahama Fruit Finch." The colored plate contains 7 figs. of *Spindalis zena*; the second plate (uncol.) contains 52 figs., mostly anatomical, of various birds. The text (pp. 1 and 2) relates entirely to *Spindalis zena*.

1889. The birds | of | eastern North America; | with | original descriptions | of all the species which occur | east of the Mississippi

River, | between the | Arctic Circle and the Gulf of Mexico, | With Full Notes Upon Their Habits, Etc., | by | C. J. Maynard; | containing | thirty-two plates drawn on stone by the author. | **Revised edition.** | Newtonville, Mass.: | C. J. Maynard. | 1889. 1 vol. (pt.) imperial 4to, 2 pr. ll., pp. 1-92, pll. I-VI (col.), text-figs. 1-22 (9 col.). Newtonville.

A revised, enlarged edition of the author's earlier work of the same title (Cf. ed. 1881), with new hand-colored plates, and numerous text-figures, many of which are also colored. The present copy is incomplete, but the John Crerar Library, Chicago, possesses a complete copy, dated 1896 on the title-page (see below), and containing pp. 1-721 with numerous colored plates and colored figures in the text. The preface to this complete copy advises that the first and second parts (evidently those collated above), were issued in May 1889 and two or three more the following year; that publication thereafter was not resumed until October 1894, while the final portion of the work appeared on December 24, 1895. Neither edition (1889 or 1896) is cited in the Zool. Record nor in the Auk.

Ornithological contributions, mostly consisting of descriptions of certain species, several of which are new. Some synonymy is given for a few of the species but no Latin names are adopted in the text. On the plates, however, both Latin and German names are used. Copies of Pt. I exist with only German names on the plates. Where Latin names occur (as in the present copy) the handwriting in which they are engraved is different from that used for the vernacular names in the same part, although it is the same as that used for both Latin and vernacular names in Pt. II. From these facts Stone (*Auk*, 37, p. 468, 1920) concludes that the 1784 edition of Pt. I was without Latin names but that these were added to the plates in time for a reissue of Pt. I to accompany Pt. II in 1786. No change was made in the date on the title-page of the reissue, nor, apparently, in the text. A Latin edition of both parts appeared in 1786.

Coues cites the pagination of this paper as pp. 1-165, but in a complete copy which I have seen of Vol. 4 of the *Transactions*, the present paper stops on p. 150, and pp. 151-165 contain the first part of Art. 2, —an unrelated dissertation. A separate reprint is said (by Coues) to contain a title-page and pp. 1-166.

1 vol. superroyal 8vo, pp. I-XVI, 1-323+1, 4 ll. (advt.), 188 text-figs. London.

A series of detailed descriptions of the game, shore and water birds of India, with short diagnoses of allied species and genera of other countries, and with introductory notes of general ornithological interest. The illustrations are mostly drawings from fresh specimens, illustrative of specific characters. The first edition of the work was printed in 1874 for private circulation; the second was published in 1878 and the third in 1887.

1 vol. royal 8vo, pp. I-VII+1; 1-150. Berlin.

An important aid to the consultation of Reichenbach's "Die Vollständigste Naturgeschichte des In- und Auslandes," 1845-63 (q.v.). A preface gives a summary of most of the parts of the work and approximate dates of publication, based on information secured from Reichenbach's son, the publishers of the book in question, and other sources. The text, which is divided into 5 parts, gives indices to the figures on Reichenbach's plates, arranged alphabetically by species and genera and also listed in sequence according to the numbering of the figures.

London. 1841-42 [-50] and 1852-] 53-57.

The 8vo format of Meÿer's "Illustrations of British Birds," 1835-41 et seq. According to Mullens & Swann and (less explicitly) Carus & Engelmann, there are two editions comprised in the set collated above. The title-page of Vol. I indicates that it belongs to the edition of 1841-50. The remaining volumes belong to the edition of 1852-57 and appeared as indicated on their titles,—Vol. VI probably in 1856, the first volume in 1852. Discrepancies in the number of plates in Vol. I as here represented and as collated by Coues and by Mullens & Swann, indicate a possibility that only the title-page is out of place. Vol. I of the 1841-50 edition is said to have contained 60 pll.; the copy at hand has 65 pll. (59 col.). However, the Cat. Libr. Brit. Mus. (Nat. Hist.) lists a copy of the work under dates of 1842-53—evidently mixed in the same manner as the present set. The original edition was in 4to, and, like the 8vo editions, was issued in parts.

1 vol. imperial folio, 3 pr. ll. (tit., ded. and pref.), 24 ll., 24 pll. (col.). Vienna.

A series of descriptions and plates of new species of plants and animals from Brazil. Five species of birds are described as new, three of them from Natterer's manuscript. The work was issued in four parts of six plates each, according to Engelmann, dating 1820-25. Wetmore (Auk, 42, p. 283, April, 1925) has given the collation and dates from a copy of the work in the U. S. Department of Agriculture, which has Pts. I, II and IV in original covers. The date for Pt. III is quoted from a discovery by Richmond in Flora Regensb. for Nov. 7, 1823, which announces the appearance of that part. According to Wetmore, the dates are as follows. Pt. I, including *Lanius undulatus*, 1820; II, including *Corvus tricolor*, 1822; III, including *Oxyrhynchus serratus*, 1823; IV, including *Tanagra chalybea* and *T. diademata*, 1825.

A comprehensive account of fossil birds, not entirely restricted to France, developed in conjunction with osteological studies of modern forms. In addition to the descriptions of the new fossil forms, the work presents a mass of information relative to the characteristics and affinities of various taxonomic groups. The work was published in livraisons of which the Zoological Record cites 1-17 in 1867, 18-25 (Vol. I concluding with 22) in 1868; 26-30 in 1869, and the completion of the work in 1871. The issuance of text did not always keep pace with that of the plates so that the two did not appear synchronously in all cases. The copy at hand was presented by the author to A(dolphe Théodore) Brongniart, (Paleobotanist).

1 vol. 8vo, pp. I-XXIV, 1-492, 1 insert-slip (errata), frontisp. (portr.), pl. I, text-figs. 1-22. Boston and New York.

A series of ornithological biographies based, for the most part, on the author's personal observations. The book was written when the author was but seven-

teen years of age but was well received because of its general accuracy and originality. The present edition is but little altered from the original except for footnotes supplied by the editor, William Brewster, and for certain changes in nomenclature and style as explained on pp. XIII and XIV. A supplement by Brewster is added to Minot's accounts of the species, on pp. 466-480. The first edition was published in December 1876. The present copy contains the autograph of D. G. Elliot.

 1 vol. demy 8vo, pp. 1-367+1., (1 map, missing). Bologna.

An important, early work on the natural history of Chile. Ornithological matter occupies pp. 232-268 and 343-345. Numerous new species of birds are described and named. There are various translations into English, Spanish, French (Cf. ed. 1789.) and German, and a revised edition in Italian by Molina, dated 1810 (q.v.). The present edition contains, in the colophon, ecclesiastical authorization dated October 12, 1781.

A French translation of Molina's "*Saggio sulla Storia Naturale del Chile*," 1782 (q.v.), with a few alterations and occasional notes by the translator, M. Gruvel. The ornithological matter appears to be practically identical in both editions, and in the present one occupies pp. 211-249 and 321-324.

1 vol. medium 4to, 3 pr. ll. (tit., ded. and ded. address), pp. I-V+1, 1-306, 1 l. (errata), frontisp. (portr.), 1 map (fold.).

A revised edition of the author's work first published in 1782 (q.v.). The text is largely rewritten with many additions and other changes. Ornithological matter occupies pp. 197-226. Catalogo I of the original edition (which contained a summary of the species of animals and plants) has been eliminated but the descriptive notes in the general text have been considerably amplified. Names of a few of the birds have been emended and many species introduced which were not included in the original edition, but none of the species appear to be new. *Trochilus galeritus* of the original is renamed *T. cristatus*.

A catalogue of the birds of Greece and outlying territory, based on a manuscript catalogue by Dr. Krüper, annotated by Hartlaub, with a migration calendar by Mommsen and a bibliography by Hartlaub. The work as collated is Pt. III of the "Griechische Jahreszeiten" of Mommsen, published (Hefte. I-V) from 1873-77.

Montagu, George.

1802. **Ornithological Dictionary; | or | Alphabetical Synopsis | of | British birds. | by | George Montagu, F.L.S. | In two volumes. | Vol. I [II]. | London: | printed for J. White, Fleet Street, | by T. Bensley, Bolt Court. | 1802.**

2 vols. in 1 vol., post 8vo. Vol. I, tit., pp. I-XL, XLII, 162 ll. (signs. C-I, K-U and X-Y₂; unpagged), frontisp. (col.; by Eliza Dorville). Vol. II, tit., 168 ll. (signs. B-I, K-U, X-Y; unpagged), 1 l. (errata to Vols. I and II). London.

An exceedingly useful publication containing a great amount of information about British birds arranged alphabetically under the vernacular names of the species. Volume I contains the introduction, consisting of a general review of

avian physiology, and the dictionary from A to L, inclusive. Volume II completes the alphabet and contains, also, a short appendix, a systematic list of British birds, a glossary, a bibliography, and the errata to both volumes. A "Supplement to the Ornithological Dictionary" (q.v.) was issued in 1813, and the work, itself, passed through a number of subsequent editions. The present volume is bound uniformly with a copy of the Supplement, each containing the autograph of J. R. Balston.

(errata), 24 pll. (uncol.; by Eliza Dorville). London.

A supplementary volume, containing additions to the "Ornithological Dictionary," 1802 (q.v.). Signs. Aa8-Ff1 comprise an appendix; Ff2-Ff5, a "Definition of the parts of extraordinary tracheæ" and "Direction for amputating the Wing of a Bird." The remainder of the volume contains the additions and alterations to the systematic catalogue, and the errata. The present copies of the Supplement and the original Dictionary are bound uniformly in two volumes, each containing the autograph of R. J. Balston.

Accounts of the nesting habits of British birds, with colored plates of nests and eggs. The present edition appears to be a reissue of the first one (published in 1853-56), with the addition of pll. XL and XLII which were omitted from the original (as catalogued by Mullens and Swann). The second edition (q.v.) appeared in 1870-71 and was reissued later, while a revised fourth edition (q.v.) was published in 1896.

6 vols. 4to (6 $\frac{3}{4}$ x9 $\frac{5}{8}$). Vol. I, pp. I-XII, 1-303, 60 pll. (col.). Vol. II, pp. I-IV, 1-283, 61 pll. (col.). Vol. III, pp. I-IV, 1-272, 56 pll. (col.). Vol. IV, pp. I-IV, 1-264, 63 pll. (col.). Vol. V, pp. I-IV, 1-247, 65 pll. (col.). Vol. VI, pp. I-IV, 1-225, 60 pll. (col.). London.

A voluminous work of a general nature, containing a mass of information, much of which is from unreliable sources and inaccurate. The plates, which are hand-colored, are fairly good, and the book early obtained considerable popularity on account of its readability and moderate cost. Mullens and Swann record 3 reissues of the first edition, four revised editions, and two cabinet editions. The present copy is of the second (first revised) edition. The first edition appeared in 1851-57, in monthly parts.

The letterpress of the present edition, except for certain added matter and slight rearrangement, is identical with that of the edition of 1866-67 (q.v.). The pagination, however, is entirely changed.

In the present edition the text is much altered from that of the first and second editions, 1866-67 and 1870-71 (q.v.). The numbering of the plates is the same (with interpolations indicated by the figures with asterisks), and the plates are of the same design as the originals although they are executed in a very inferior manner. An introduction (pp. V-XIII) is from the pen of Tegetmeier who is probably responsible for many of the changes in the work.

1 vol. 8vo, pp. 1-432, 1 l. ("Plates"), frontisp., pll. 1-84 (by Audubon, Fuertes, Horsfall and Wilson and from photos.). Trenton.

The ornithological portion of the present report, forming Part II (pp. 11-137 and 409 pt.—419 pt. with pll. 1-84), consists of a descriptive catalogue of the birds of New Jersey. Concise descriptions of each species are followed by notes on distribution, local occurrence, habits, etc. Tables for the determination of species are given under family headings. Part I contains the general annual report and Part III, the notes on fishes, amphibians and reptiles by Henry W. Fowler.

A popular account of the habits of British birds, illustrated with colored figures of some of the species. The author's "twenty-eight plates" include text-figures (uncol.) and exclude frontispieces and the title-page vignettes. The first edition was published in 1834; a fourth, in 1853. The illuminated title-pages in the present edition bear the date, 1853; the full title-pages, 1854, as transcribed.

1 vol. 8vo, pp. I-XX, 1-691 (675-691 on one side of paper only). London.

An exceedingly useful and important work containing an enormous amount of information. Only those authors are included who have published separate works on British ornithology, and short notes by these are excluded. The work was published in six parts, issued as follows. Part I, pp. 1-112, June 20, 1916;

II, pp. 113-240, July 25, 1916; **III**, pp. 241-?, Sept. 19, 1916; **IV**, pp. ?-496, Dec. 4, 1916; **V**, pp. 497-?, Febr. 2, 1917; **VI**, ?-691, June 29, 1917. A supplement was issued in 1923 by Swann, under the title of "A Bibliography of British Ornithology from the Earliest Times; Supplement; A Chronological List of British Birds" (q.v.). The dates, but not the extent, of the various parts of the present title are given on the reverse of the title-page. I have secured the contents of a few parts from the Auk and the Zoological Record.

1920.

I vol. 8vo, pp. I-VIII, 1-558. London.

The present volume catalogues "all separate works, articles or notes in periodicals, dealing with local faunas" of British ornithology. The work was issued in six parts as follows. Part **I**, pp. 1-96, Nov. 7, 1919; **II**, pp. 97-192, Jan. 5, 1920; **III**, pp. 193-288, March 25, 1920; **IV**, pp. 289-384, May 27, 1920; **V**, pp. 385-480, July 1, 1920; **VI**, pp. 481-558, Sept. 1, 1920. The dates are given on the reverse of the title-page; the extent of these parts I have ascertained from the Auk.

A detailed monograph of the hummingbirds. The work was issued in 16 livraisons as follows. Vol. I, livr. 1, 1873; livr. 2, 1873 (Coues) or 1874 (Ibis); livrs. 3-4, 1874. Vol. II: livrs. 1-2, 1875; livrs. 3-4, 1876. Vol. III: livrs. 1-2, 1876; livrs. 3-4, 1877. Vol. IV: livrs. 1-2, 1877; livrs. 3-4, 1878. The extent of each livraison is indeterminate from the present copy but the Zoologica Record lists the various species figured on the plates as they appeared, from which it is possible to get the approximate dates of some of the illustrations. However, it is apparent that plates and text were not synchronous. For example, *Doleromia fallax* is discussed in Vol. I where it is accompanied (in the bound volume) by the plate of this species, but the Zoological Record notes the publication of the figure of this species in Vol. III, Pts. 3-4. A Supplement (q.v.) was published in 1879.

- 1 vol. royal 4to, (cover-tit.), pp. 1-2, 1 l. (blank), 56 pll. (col.; by Bevalet and Mesplis). Lyons, Geneva and Basel.

A series of plates intended to supplement those in the "Histoire Naturelle des Oiseaux-Mouches ou Colibris," 1873-78 (q.v.). The letterpress consists of a list of the plates (incomplete), with references to the volume and page where each is to be inserted in the general work. Although the cover-title is dated 1877, the supplement appears not to have been issued until 1879, according to the Zoological Record. The addition of these plates to the general work has led, apparently, to the citation of a varying number of plates under the earlier dates. According to a recent advertisement, in which a copy in original covers is offered for sale, the present section of the entire work consists of 7 supplements in 5 parts.

1 vol. royal 8vo, pp. I-XX, 1-362, 32 pll. (photographic), 8 text-figs. New York and London.

A narrative and descriptive account of the author's investigations on the western coast of Peru, South America, in 1919-20, with reference to the "oceanic conditions . . . responsible for the abundance of life in Peruvian waters, as well as the interrelationships and distribution of this life." A considerable part of the text and many of the illustrations relate to birds, especially to the important guano producing species of the region.

2 vols. 4to (6½x9½). Vol. I, tit., pp. I-VI (conts.), 3 ll. (list of illustrs., errata and pref.), pp. I-XXIV (intr.), 1-325, 1 insert-slip, 22 pll. (12 col.; 1 fold.), 38 text-figs. Vol. II, tit., pp. I-VII+1 (pref. and list of illustrs.), I-XVII+1 (conts.), 1-838, 1-42 (distribution table), 2 ll. (addenda, Vol. I), 2 insert-slips (errata), 15 pll. (7 col.), 56 text-figs. London and Bombay.

Title sufficiently explanatory. The work appears to have been issued in 7 parts as follows Vol. I, Pt. I, pp. 1-106, 1887; II, pp. 107-180, 1888 (?); III, pp. 181-325, 1888 Vol. II: Pt. I, pp. 1-128, 1889 (?); II, pp. 129-294, 1889 (?); III, pp. 295-496, 1889; IV, pp. 497-838 and 2 ll. (addenda, Vol. I), 1890. The distribution table at the end of Vol. II probably appeared with Pt. IV; likewise the introductory matter of the second volume. The introductory pages of Vol. I appeared with Pt. III of that volume. The separation of the various parts is marked by differences in the size of paper, signatures with but a single leaf,

insertion of errata-slips, etc.; the Zoological Record defines the limits of Vol. II, Pt. IV and gives the date of commencement of the work as 1887. The work is cited but little.

A volume composed of extracts from the author's "The Avifauna of British India," 1888-90 (q.v.). The text relating to the species of Indian birds which are found in Ceylon is copied verbatim, the introduction is reprinted, and most of the illustrations are the same as in the larger work.

¹Leverkühn, Biographisches über die drei Naumanns und Bibliographisches über ihre Werke, 1904. On p. 63, the author concludes that no subtitle for this part ever appeared.

²Leverkühn, l.c., pp. 61 and 62, records the date of 1795 as occurring on the original title-pages of Pts. 1 and 2 of Vol. I, published in Leipzig "in Kommission bei Friedrich Osterloh." With the change in publishers which occurred with Pt. 3, new title-pages were issued for the preceding two parts to agree with the third part, and the remainder followed in accordance. The original title-pages (or, more properly, subtitle-pages) of Pts. 1 and 2 are not preserved with this copy.

³Leverkühn, l.c. p. 65, gives 1811 as the date on the title-page of this part. This may be a typographical error; the date is very clearly 1817 in both copies of this part at hand (Cf. reissue, same date.).

¹Leverkühn, l.c., p. 61, records similar subtitles for all parts of Vol. I and a similar title for the complete volume, but adds that there is no copy of the work which is supplied with a full set of originals and substitutes. Since the region embraced by the 'Ausführliche Beschreibung' (Anhaltischen Fürstenthümern) is less extensive than that included in the 'Naturgeschichte' (Nördlichen Deutschlands und angränzender Länder), the former is assumed to constitute the original title of the work as first projected while the latter (adopted for the entire work) represents the final title.

A monumental work on the birds of northern Germany and surrounding country. Begun as a series of descriptions of the birds of the Principalities of Anhalt (now part of Thuringia), Vol. I was issued under the title of "Johann Andreas Naumann's ausführliche Beschreibung aller Wald- Feld- und Wasser-Vögel," etc. (Cf. above transcription and footnote 4.). Pts. 1 and 2 of this volume were published in Leipzig in 1795 in commission with Friedrich Osterloh. With Pt. 3, the publisher was changed to J. A. Aue and new subtitle-pages were issued for the first two parts to agree with the new arrangement; these new subtitle-pages were also inscribed with the title of "Johann Andreas Naumann's ausführliche Beschreibung," etc., as were the subtitle-pages of Pts. 3-6 of Vol. I and the title-page for the completed volume. With the inception of Vol. II (perhaps beforehand) it apparently was determined to enlarge the scope of the work so as to include the birds of all of northern Germany and outlying regions, and the title was altered, in accordance with this plan, to "Naturgeschichte der Land- und Wasser-Vögel des nördlichen Deutschlands und angränzender Länder." For the sake of uniformity, a new title-page and new subtitle-pages were printed for Vol. I and its six parts, containing the new title, and in this form the work was carried to completion. On account of the various changes just mentioned, two styles of title-page and three of subtitle-page are in existence; the present copy contains one of title and two of subtitle as transcribed above. The final title for the work, however, is "Naturgeschichte der Land- und Wasser-Vögel."

With the early change in publisher, the reissued title-pages for Pts. 1 and 2 were inscribed with the date of the reissue, —the date of Pt. 3, —1796. J. F. Naumann, in the preface (p. VIII) to Vol. I of his "Naturgeschichte der Vögel Deutschlands," 1822-60 (q.v.), gives the inclusive dates of the present work as 1796-1817, but there is no reason to doubt that the first two parts actually appeared in 1795 at Leipzig, as dated on the original subtitle-pages of these parts.

Each part of the work contained 8 plates, drawn and (beginning with pl. XVI of Vol. 1, Pt. 1) engraved by the author's son, Johann Friedrich Naumann (junior author of the supplementary parts). From Pt. 1 of Vol. I to Pt. 3 of the Supplement, the plates were in demy folio (largest example at hand, 10¼ x 14¼, trimmed); the remainder were in 8vo, —at least no folio plates are known beyond this point. Somewhere about the date of the first Supplement (1804), the artist commenced the preparation of a series of 8vo plates to take the place of the earlier folio issues, revising the composition and details of every plate and keeping only the original numbers of the plates and figures (with certain corrections) and dividing pl. XX of Suppl., Pt. 3, into two plates, XXA and XXB. This issue of 8vo plates constitutes an insoluble mystery. Various speculations have been advanced regarding the reasons for, and methods of, publication and regarding the consequent disappearance of all but a very limited number of the original folio impressions.

The earliest folio plates undoubtedly were somewhat crude, compared with the later ones or with the 8vo plates, and it is conceivable that the artist may have wished to destroy these earlier examples of his handiwork and to replace them by the later, more perfect drawings, but this motive is by no means proven nor is the method clear by means of which such an object could have been accomplished. There is no printed record of any such transaction requested or fulfilled, and the artist-author later kept silent in the face of published request for information on the early work.

Only three copies of the work are known which have the full number (192) of folio plates and at least one of these copies has been completed from an outside source; nine copies are known which are more or less complete (including the present set, three copies are known in a very fragmentary form, —possibly more which are unrecorded. It seems incredible that the work could have been carried to completion with only fifteen subscribers or with double that number, assuming that half of the original copies have been destroyed; the author was not rich and was not subsidized and he advertised his work for sale at the low price of "1 thl. 16 gr." per part (Vol. III, Pt. 7, advt. leaf). The present set, like others of the imperfect copies, has most of the plates in folio and the remainder in 8vo. Specimens are more common with all of the plates in 8vo; an example of this kind is catalogued below (q.v.).

There are two issues of pl. XXXI of Vol. I, Pt. 4. In one of these the upper figure is looking forward to the left; in the other its body is directed to the right but its head is turned backwards to the left, and there are other differences. The present copy is of the former type.

The preface to Vol. III, Pt. 1 is dated, March 1789. In Suppl., Pt. 4, 1811 (which contains the description of the new genus *Acrocephalus*, p. 199) there is on p. 191 a reference to an occurrence "am 20. Mai dieses Jahres" which may be of assistance in fixing the date of this part. Leverkühn, l.c. (Cf. footn. 1.) gives a very thorough account of the Naumanns and their ornithological works including voluminous details regarding the present title. For further accounts see Lindner, Mitth. ornith. Ver. Wien., 18, pp. 109-111 and 125-128, 1894; Ornith. Monatsb., 21, pp. 47-49 and 52, 1913; Schiller, Ornith. Monatsb., 21, p. 67, 1913.

To recapitulate, the present copy has all of the letterpress except that of Vol. III, Pt. 9, and this gap is filled by the text of the 8vo edition which is identical. The full title-pages of Vols. I and IV, missing here, are also supplied in the 8vo edition. The frontispiece of Vol. IV is missing from both sets. Of the folio plates there are 136 present, including all belonging to Vol. I; Vol. II; Vol. III, Pts. 1-8; and Vol. IV, Pt. 1 (lacking those of Vol. III, Pt. 9; Vol. IV, Pts. 2-4; and Suppl., Pts. 1-3). The 8vo plates (the only ones issued) for Suppl., Pts. 4-8, are all present. Vol. IV, Pts. 2-4 and Suppl., Pts. 1-3 are supplied with 8vo plates instead of the missing folio examples. There are no plates in this set for Vol. III, Pt. 9, but the 8vo plates for that number are in the 8vo set (q.v.).

Vol. III, frontisp. missing; Pt. 3, no blank leaf; Pt. 9 present, complete. Vol. IV, title present, frontisp. missing. Supplement, Pts. 7 and 8 missing. Atlas of 216 plates in 8vo (col.) (should be 233; pll. XLIX-LXIV of Suppl., Pts. 7 and 8, missing); all plates correctly numbered and most of them marked with the volume-number except the following pll. of Vol. I,—I-VIII, XXXIII, XLIII, XLIV, XLVI and XLVIII; Suppl., Pt. 3, pll. XX A and XX B replace pl. XX of the folio series (missing from the set of folio plates collated above). Leipzig and Cöthen.

The text of the present edition is identical with that which accompanied the folio plates (collated above), even to the inclusion of the corrigenda which often have no application here since the required alterations were made in the new plates. It is evidently the original text, intact. All of the plates, however, are in 8vo. Those of Suppl., Pts. 4-6 (7 and 8 missing) are the same as in the earlier issue since no folio plates were published for these parts, but the rest are new.¹ They are of entirely new designs and are related to the original folio plates only by reason of representing the same species and by carrying the same numbers for plates and figures (with corrections as necessary and with the substitution of two plates for one, as mentioned in the collation).

These 8vo plates are unquestionably of later issue than the folio plates of corresponding numbers. A few of them are signed with the date of preparation and in every such case the date is subsequent to the date of publication of the original issue. The following examples have been noted. Vol. I, Pt. 3, pl. XVII, dat. 1804; folio dat. 1796. Vol. I, Pt. 4, pl. XXXI, dat. 1804; folio dat. 1797. Vol. I, Pt. 5, pl. XXXIV, dat. 1805; folio dat. 1797. Vol. I, Pt. 6, pll. XLI, XLII and XLVIII, dat. 1805; folio dat. 1797. Vol. III, Pt. 1, pl. I, dat. 1806; folio dat. 1799. Vol. III, Pt. 4, pl. XXXI, dat. 1807; folio dat. 1800. Vol. III, Pt. 9, pl. LXVII, dat. 1807; folio dat. 1802-03?. J. F. Naumann himself (Naturg. Vögel Deutschl., 13, p. 454), referring to pl. XLVI (fig. 105) of Vol. I, Pt. 6, (folio publ. 1797), says that the 8vo plate of the same species appeared "schon c. 10 Jahr später." Exact dates of publication of any of the 8vo plates, except those which belong to Suppl., Pts. 4-8 as original issues, are unknown.

The present copy lacks Suppl., Pts. 7 and 8, with the included plates. The gap is filled by the corresponding parts of the original edition (q.v.) which are identical with those missing here.

¹The plates in Vol. IV, Pts. 2-4 and Suppl., Pts. 1-3 in the original copy collated above belong to the present edition, being substitutes for the folio plates which are missing from that copy. They are duplicated in the present copy.

Immediately after the completion of the present book, J. F. Naumann began the preparation of a work which he considered to be a second edition of the present title but which was so rewritten and improved that it should stand as a distinct production. A copy is collated below under J. F. Naumann, *Naturgeschichte der Vögel Deutschlands, 1822-60* (q.v.).

(obit. notice, pll. 338-370 (col.), (conclusion, by Blasius, Baldamus and Sturm), pp. 1-316, pll. 371-391 (col.; by Naumann and Sturm). Leipzig and Stuttgart.

A complete natural history of the birds of Germany. While entitled "J. A. Naumann's Naturgeschichte," etc., the work is quite distinct from J. A. Naumann's work, "Naturgeschichte der Land- und Wasser-Vögel des nördlichen Deutschlands und angränzender Länder" of 1795-1817 (q.v.), although the earlier book laid the foundations for the later one. A few of the plates are the same but most of them have been remodeled and many of them entirely redrawn while other new ones have been added. The volumes seem to have been issued regularly as indicated by the printed dates on the title-pages, except Vol. XIII. This volume, consisting entirely of supplementary notes and discussions, was begun by Naumann and issued in parts. Interrupted by Naumann's death in 1857, it was then completed by Blasius, Baldamus and Sturm. There is considerable uncertainty about the dates and composition of the earlier parts. Judging from changes in typography, irregularities in signature marks, the appearance of new works in the synonymic references, and such other criteria, the following division seems probable. Part 1, pp. 1-80; 2, 81-192; 3, 193-254; 4, 255-304; 5, 305-370; 6, 371-418; 7, 419-466; 8, 467-486; "Fortsetzung der Nachträge," 1-316. Leverkühn (l.c., p. 39) quotes Blasius to the effect that Pts. 1-7, pp. 1-

466, 28 pll., appeared from 1845-54; Carus and Engelmann give 1846-53 for the same 7 parts, and cite pp. 467-485 and the "Fortsetzung" under date of 1860. Engelmann credits the supplement, with 40 colored plates, to 1847.

An early work on the nests and eggs of the birds of Germany and neighboring countries. The pages with Roman numeration contain essays on nests and nest-building, classification of birds, form and internal anatomy of eggs, embryology, brooding habits, etc. The general text is arranged in six parallel columns containing (1) nomenclature of species; (2) description of species; (3) habitat; (4) food-habits; (5) nidification; (6) description of eggs. The colored plates of eggs were painted by Naumann. In 1860, a so-called second edition was published by Fürchtegott Grässner under the title of "Die Vögel Deutschlands und ihre Eier" (q.v.), but in reality this is a distinct work.

- 1** vol. royal 8vo, pp. I-VII+1, 1-256, 4 ll. (expl. of pll.), pll. I-IV (col.). Braunschweig.

An annotated list of 3546 species of extra-European birds represented in the egg collection of the author. A brief description is given of most of the eggs, the distribution of the various species is given, and references are made to the Catalogue of Birds in the British Museum. A second edition appeared in 1910 (q.v.). The present copy was presented to P. L. Selater by the author.

1 vol. 8vo, pp. I-VII+1, 1-449+1, 4 ll. (expl. of pll.), frontisp. (portr.), pll. I-IV (col.). Berlin.

This is a second edition of the author's earlier work of the same title, 1899 (q.v.), prepared in the same style but cataloguing 5440 species and subspecies. A supplementary volume, "Nachträge zu Nehrkorn's Eierkatalog" (q.v.) appeared in 1914.

A supplement to the author's "Katalog der Eiersammlung," 1910 (q.v.). A supplement, listing 327 additional species, is given, followed by a further supplement cataloguing 13 more species. A systematic list and an index are next in order, followed by the colored plates. The 5780 species and subspecies in the collection are then reviewed in systematic order, after which another additional supplement of 42 species is given, bringing the number of recognized forms represented in the collection to the total of 5822.

A popular account of North American birds, of the English edition of which Elliott Coues was most eulogistic in his reviews. The German text (collated above) appeared in 13 parts, of which Pt. 1 appeared in 1889 (reviewed in *Auk*, July 1889). The *Journal für Ornithologie* acknowledged the receipt of Pts. 1-6 in the number for Jan. 1890, 7-9 in Jan. 1891, 10-12 in Oct. 1891, and 13 in Oct. 1892, but the final part probably appeared in 1891, the date on the title-page and preface. An edition in English began simultaneously with the German (Pt. 1 is reviewed in the *Auk* for July, 1889), but it was not completed

before 1896. It appeared in two volumes under the title of "Our Native Birds of Song and Beauty," to which it was changed from "North American Birds," under which the first few numbers were issued. It comprised 16 parts, but contained the same matter and the same illustrations as the edition in German.

An account of the birds, mammals, fishes and diurnal Lepidoptera, collected by Nelson in Alaska from 1877 to 1881. The introduction (pp. 11-34) contains the narrative of the expedition; the birds are treated on pp. 35-226 and pll. I-XII. Both the introduction and the ornithological portion are by Nelson. The volume forms No. III of the Arctic Series of Publications, of which No. II, "Contributions to the Natural History of Alaska" by L. M. Turner, 1886 (q.v.) is also in the Ayer Ornithological Library.

A volume containing an enormous amount of information relating to various phases of ornithology, conveniently arranged in alphabetical order with copious cross-references. A work of which Coues once wrote (*Auk*, XIV, p. 236, April 1897), "Far and away the best book ever written about birds." The anatomical paragraphs were written by Gadow and are distinguished by having the titles in Italics. Roy contributed an article on flight; Lydekker, several paragraphs on fossils; and Shufeldt, accounts of several North American birds;—these notes being signed by their respective contributors. Issued in four parts, about as collated above except that the introductory matter up to the first subtitle (pp. I-XII and 1-124, introd.) appeared in the fourth part. The arrangement of pages is taken from the instructions to the binder on the reverse of the subtitle to Pt. IV; the present copy is wrongly assembled and certain pages are lacking. I have quoted the subtitles in the absence of the general title. A second edition, unabridged, was issued in one volume in October 1899.

A descriptive list of Egyptian birds. References are given, where possible, to Shelley's "A Handbook to the Birds of Egypt," 1872 (q.v.). The uncolored plates are from photographs of skins; the colored ones, from drawings. The introduction is dated October 24, 1919.

A descriptive catalogue of Swedish birds. Numerous new names are proposed which are untenable, being antedated by other valid terms. The work appears to have been issued in two parts as collated, but Pt. II contains two subtitle-pages lettered "Fasciculus prior" and "Fasciculus posterior," respectively, which indicate a possible division. "Fasciculus prior" occurs between pp. 112 and 113, on the first leaf of the signature ending on p. 126; "Fasciculus posterior" is on p. 133 (134 blank), at the end of its signature. The texture of the paper on p. 135 and the pages immediately following appears to be slightly different from that of the preceding pages, indicating a possible separation in dates of printing or publication. The preface was signed on Dec. 6, 1830.

The ornithological portion of Nordenskiöld's report on the voyage of the Vega, published in 5 vols., 1882-87. The present contribution forms part of Vol. V and consists of a detailed report, by Palmén, on the birds of the Arctic coasts of Siberia, not restricted to the material secured by the expedition. Many of the species discussed are commonly found in Arctic North America (some of them are properly Nearctic species) and their distribution in Alaska and northern Canada is, therefore, discussed. A detailed bibliography of the ornithology of all Arctic regions, arranged geographically, and a tabular arrangement of species, showing distribution and records, are important additions to the text. *Larus argentatus Vegae* is described as new.

A voluminous report, containing descriptions of the plumages, eggs and nesting habits of supposedly all the birds found breeding in Australia and Tasmania; partly original and partly compiled from correspondence, published notes, etc. Unfortunately, many published records were ignored, making the work less complete than it would otherwise have been. H. L. White (*Emu*, 15, pp. 57-65, 1915) gives a list of omissions. Plates "A" are of nests; "B" are of eggs.

The work appeared in 17 parts, the dates and contents of which are given in the introductory pages of the various volumes (p. III of Vols. I-III; p. II of Vol. I). These dates are correct but omit to mention the introductory matter of the volumes. In the cases of Vols. II-IV, the introductory matter is dated the same month as that given for the issue of the last part in each of those volumes. In Vol. I, the introduction is dated October, 1904 but the last part of that volume is dated July 11. Possibly the introductory matter formed a final (separate) part; if so it would bring the total number of parts in all volumes to 18.

A supplement was issued in the Records of the Australian Museum, Vol. 1, No. 6, 1891.

A popular account of the birds of Holland, illustrated by hand-colored plates of all of the species, and of the nests and eggs of some of them. The birds and their habits are described in detail. It appears to be the first comprehensive work on the ornithology of the region. It was begun by Nozeman, who died in 1789, and was taken up by Houttuyn who completed the work. The dates on the title-pages appear to be accurate, but Blaauw, in "Notes from the Leyden Museum," Vol. XV, p. 185, 1893, cites the dates as follows,—1770, 1789, 1812, 1826 and 1829,—a discrepancy of 15 and 17 years, respectively, in Volumes III and IV. No particulars are given and the citations may be in error. The work is sometimes quoted as Nozeman and Sepp.

Nuttall, Thomas.

1832-34. A | manual | of the | ornithology | of the | United States and of Canada. | By | Thomas Nuttall, A.M., F.L.S., &c. ["&c." omitted] | The land [water] birds. | Cambridge [Boston]: | Hilliard and Brown, [Hilliard, Gray, and Company.] | booksellers to the university. [*Line omitted.*] | M DCCC XXXII [M DCCC XXXIV].
2 vols. 12mo. "Land birds", pp. I-VIII (I-II, VII-VIII missing), 1-683, 53 woodcuts. "Water birds", pp. I-VII+1, 1-627, 61 woodcuts. Cambridge and Boston.

The original edition of Nuttall's work, one of the early landmarks in the history of American ornithology. Descriptions of the species, including various new ones, and copious notes on their habits, based partly on personal observations and partly on the writings of Wilson, Audubon and others, are united to form an authoritative and readable text. A second edition of Vol. I (q.v.) was issued in 1840. The present copy is from the library of Charles Robert Bree who secured it from that of Rev. John Fleming.

1 vol. 12mo, pp. I-VIII, 1-832, 53 woodcuts. Boston.

A revised edition of the first volume of the earlier work of the same title, 1832-34 (q.v.), with "new species and many additional observations. . . . derived from my friend Audubon as well as the result of a journey made by myself and Mr. Townsend across the continent to the coast of the Pacific." Although cited by Coues as consisting of two volumes (including the water birds), the present edition appears, properly, to comprise only the single volume on the

land birds. The second volume often found associated with this one (as in the present case), either is a copy of the original edition or is printed from the original plates without alteration of any kind, including the date. The present copy is autographed by Capt. George A. McCall.

2 vols. demy 8vo. Vol. I, pp. I-XLVIII, 1 l., pp. 1-473, frontisp. (col.; by Ernest E. Thompson), 87 woodcuts (+1 headpiece). Vol. II, pp. I-VII+1, 1-431, frontisp. (col.), 86 woodcuts. Boston.

Based on Nuttall's 'Manual' with part of the descriptions rewritten and supplementary notes added to Nuttall's account of habits, distribution, etc. The woodcuts are, in a great many cases, copied from Yarrell's "History of British Birds," 1837-43 (q.v.), and possibly from other sources, but some of them are new. There is a later edition of the same work.

The ornithological numbers of a series of eight volumes, including two on fishes, one on reptiles and batrachians, one on mammals, and the present four on birds. The first two volumes on birds were written by Oates; the last two by Blanford who was also the author of the volume on mammals and the editor of the entire series. The present volumes contain a thorough monograph of the birds of India, Ceylon and Burma, with descriptions of the various plumages, measurements, notes on distribution and habits, and detailed synonymies. A bibliography is included in Vol. IV. A so-called second edition of this work (in reality an entirely new presentation of the subject) was begun in 1922 and is still in course of publication (Cf. Baker, E. C. Stuart, *The Fauna of British India—Birds*, 1922-date.).

An interesting narrative of the author's experiences while on an ornithological expedition to the Lesser Antilles in 1876. Notes on the bird-life of the islands are scattered throughout the text, and in the appendix (pp. 347-366) is given a catalogue of all the species noted (from Proc. U. S. Nat. Mus. **1**, pp. 46-69, 185-198, 232-242, 265-278, 349-360 and 449-462) followed by descriptions of the new species (from Ann. New York Acad. Sciences) by Lawrence. The first edition was published in 1880.

A verbatim reprint of the title-page and pp. 290-361 of Vol. II of William Guthrie's "A New Geographical, Historical, and Commercial Grammar; and Present State of the Several Kingdoms of the World.—Second American Edition Improved.—Philadelphia:—1815." The subject matter consists of lists of the mammals, birds, reptiles and amphibians of North America, with biographical sketches of some of these and of a few fishes and insects. The accounts of the birds are taken largely from Wilson. A number of new species are described. The original work is extremely rare. The appendix, by Rhoads, contains annotations relative to the foregoing text.

An account of the author's travels in China and the East Indies in 1750-53. The present edition is a translation of the original work which was published in Stockholm in 1757. Voluminous notes on the natural history of the regions traversed are given throughout the volume. Many of these relate to birds, for which binomial names are used. Forster's edition in English was published in 1771.

The narrative of the expedition, with descriptions of the country and localities
at many of which zoological specimens were secured. Appendix J, pp. 599-602,
gives a list, by Cassin, of the species of birds secured by the expedition, so
far as they had been determined at the date of publication, with notes on a
few of them. The expedition was primarily nautical, and the collection of
natural history specimens was incidental.

A series of memoirs on various zoological subjects, translated by Boddaert (with the addition of annotations) from the Latin of Pallas. Each of the six parts has its special subtitle-page differing from the general title-page principally in the indication of serial number and contents, and in the varying dates. The dates, as printed, are as follows. Pt. I, 1767 (pref. dated October 4); II, 1768; III, 1769; IV, 1769; V, 1770; VI, 1770. Part VI, only, contains ornithological matter and is devoted to a discussion of the "Poulpeentades" and the "Papegaaiduikers" (Guinea Fowls and Puffins).

(Atlas, 76 pll., fold.; 15 from Vol. I, 21 from II and 40 from III, noted under their respective vols.) Frankfurt and Leipzig.

The history of the author's journeys in Russia, with appendices describing the natural history of the region, mostly concerning botany. The birds are discussed in the appendix of Vol. II, pp. 7-18, and figured on pll. CD and EFGHI. Plate C** is listed on p. 52 of the appendix to Vol. I but appears to be missing from the set. Owing to the discrepancy in the size of the plates and text, the plates, except I of Vol. II and I of Vol. III, have been bound in a separate volume without title-page. This is the second edition of the work, the first, in 4to, having been issued in 1771-76.

A detailed catalogue of the collection of birds made in Brazil by Johann Natterer during the years 1817 to 1835. The collection consisted of 12,293 bird-skins representing 1238 species. These are arranged and listed and the new forms are described. Pp. 344-390 contain an analysis of the avifauna of Brazil. Pp. 391-462 contain a list of all known Brazilian species, compiled from various sources, comprising a total of 1680 species.

The work appeared in four parts, dates for which are printed on the reverse of the title-page, but these dates as well as that on the title-page are unreliable. Dr. C. E. Hellmayr has kindly furnished me with the list of the contents of each part, obtained from a copy of Pts. I-III in original covers which is preserved in the Museum Heineanum in Halberstadt. The dates on these original covers agree with the dates on the reverse of the title-page of the volume. The following notes are available. Pt. I (pp. 1-68, 3 pr. ll., pp. I-XXXI and the route map) bears the date 1868 but the preface is dated September 1867 and the part was noticed in the *Journal für Ornithologie* for September 1867, although this number of the *Journal* may not have appeared until 1868; it is likewise mentioned by Sclater and Salvin in a paper read before the Zoological Society of London on January 23, 1868, although this paper was not published

until the following year in the Proceedings for 1868, p. 55. Part I, therefore, must remain dated 1868 with a strong probability that it was actually published in 1867. Pt. II (pp. 69-188 and XXXIII-XLIII) is dated 1869 but was presented to the Deutsche Ornith. Gesellschaft at a meeting held on October 6, 1868; furthermore, the publishers have advised Dr. Hellmayr that the part was published in late September of that year. Pt. III (pp. 189-390, XLV-LIX and regional map) is dated 1870 and was presented to the Deutsche Ornith. Gesellschaft at a meeting held on February 1 of that year. Pt. IV (pp. 391-462, 1-18=addenda and index, and title-page) is dated 1870 and was presented to the Deutsche Ornith. Gesellschaft at a meeting held on Oct. 3 of that year, being reviewed in the Journal für Ornithologie for September.

The work is indispensable to the student of South American ornithology.

1 vol. superroyal folio (14½x21), 7 pr. ll. (tit., ded., pref. review of Class I, and errata), pp. 1-162, 2 ll. (index), 132 pll. (col.; by P. Paillou, Desmoulins, G. Haulner, C. Collins, P. Brown and G. Edwards).. London.

A descriptive account of the birds and mammals of Great Britain. Issued in four parts from 1761 to 1766 with the 107 plates (9 of mammals and 92 of birds) as specified on the title-page. To this a fifth part was added later with 25 additional plates (2 of mammals and 23 of birds), making 132 plates in all (11 of mammals and 121 of birds). Most of the plates are by Paillou. This, the original edition, was anonymous; the author's name appeared on the title-page for the first time in the 5th edition (according to Coues), but occurred at the end of the preface in earlier ones (Cf. 4th edition, 1776-77.). The text of the ornithological section of the present work occupies pp. 57-162.

1769. > Indian zoology.

1 vol. demy folio, (no tit.), pp. 1-14, pll. I-XII (col.). London.

The first number of a projected work on Indian zoology which, in this form and edition, was abandoned after the issue of the first part, here collated. The plates, including three unpublished ones, were presented to Johann Reinhold Forster who used them in his "Zoologia Indica" or "Indische Zoologie" (Cf. Latham and Davies, Faunula Indica, 1795.). A second edition of the present work (q.v.), including a translation of Forster's additions to it, appeared in 1790. The material for the present work is said to have originated in notes and drawings made in India by John Gideon Loten. Pl. I is mammalogical; the remainder are ornithological. See J. A. Allen, Bull. Am. Mus. Nat. Hist., 24, pp. 111-116, 1908, for a review of this, and the second, edition.

There is no title-page. The title transcribed above is taken from the heading of the pages of text.

I-XCIII+IX A (col.). Warrington and London.

The 8vo issue of the fourth edition (the 4to being entirely different) of Pennant's work (Cf. orig. ed., 1761-66.). The illuminated title-pages and subtitle-pages of Vols. I-III bear a London imprint at variance with the Warrington imprint on the printed title-pages but agreeing with that on the illuminated (and only) title-page of Vol. IV. The second illuminated subtitle-page of Vol. I and the illuminated title-page of Vol. II are numbered as plates; none of the others are so numbered. The regular issue of this edition appears to have uncolored plates. The ornithological matter is contained in Vol. I, pp. 153-418, pll. XV-LIX and Vol. II entire. Only Vol. I is inscribed "Fourth edition." The copy contains the bookplate of W. H. Mullens.

- 1 vol. demy 4to, 3 pr. ll. (enr. tit., author's note, ded.), pp. I-XXV+1 (pref. and expl. of tit.-vign.), 1-68, 1 l. (index), pll. I, II, III-IV (on one pl.), V-XVI (=15 pll.). London.

The second edition. According to the author's note, the work was written in 1772 and presented (for use in classwork) to Dr. Robert Ramsay who published the first edition in 1773, without plates. The work consists of a general discussion of ornithology, followed by diagnoses of 95 genera under English names. The Latin names are given in the synonymy of each genus and in a table of classification (pp. XXII-XXV), to which someone has added, in manuscript, the page-references. It seems to have been the original intention to figure an example of each genus, but the appearance of Latham's "General Synopsis of Birds," 1781-85 (q.v.), discouraged the project, as noted on p. 57.

1784-85. <i>Arctic zoology</i> . Vol. I [II].	Introduction
	Class I. Quadrupeds.
[Class II. Birds.] [<i>Vignette</i> .] [<i>Pied Duck</i> , No 488 (<i>Vol. II.</i>)]	
London: printed by Henry Hughs. M.DCC.LXXXIV [M.-DCC.LXXXV].	

2 vols. demy 4to. Vol. I, tit., pp. I-CC (introd.), 7 ll. (index to introd., pref. and list of pll.), pp. 1-185, frontisp., pll. I-VIII (1 fold.), tit.-vignette. Vol. II, tit. pp. 187-586, 7 ll. (index and errata), pll. IX-XXIII (of birds), tit.-vignette. London.

Originally intended as a sketch of the zoology of North America but later altered to include descriptions of the quadrupeds and birds of the northern parts of Europe and Asia. Vol. I contains the introduction, with its account of the northern regions and incidental mention of birds and other animals, and the detailed discussion of the mammals. Vol. II is entirely ornithological. No binomial names are used, except in the synonymy, but the full descriptions of new (and other) forms formed the basis for Latin names subsequently applied by Gmelin and Latham. In 1787 a supplementary volume was issued, often cited as Vol. III of the complete work. Later editions were published in English and German.

Printed by Henry Hughes, for Robert Faulder. | MDCCXC.

1 vol. medium 4to, illum. tit., pp. I-VIII, 1-161+1¹ 1 l. (errata),
pll. I-XVI (col.; 14 ornithological). London.

A reprint of Pennant's original "Indian Zoology," 1769 (q.v.), with a translation of certain matter which was added by Forster in his Latin-German edition of 1781 (Cf. Latham and Davies, *Faunula Indica*, 1795.), and a list of oriental and near-oriental animals, entitled, "The Indian Faunula." Pages 1-12 contain a translation of "An Essay on India" by Forster; pp. 13-27, "On the Birds of Paradise and the Phoenix," also by Forster. Pp. 27-56 contain the descriptions of the birds, fishes and the single mammal figured on the sixteen plates. Pll. VII, IX, XIV and XVI are new to this edition of Pennant being taken from Forster. "The Indian Faunula" occupies pp. 57-161 (67-86 ornithological), and is credited by Pennant to Latham (for the portion on insects) and Davies (for the remainder). The names of the mammals and birds are given only in English, but to the remainder of the species Latin binomials are assigned. The "Faunula" was reprinted by Forster, with some additions and with Latin names for the birds and mammals, in his second (1795) edition of his work. The present copy has the plates colored (rare thus), and has the flyleaf inscribed, "To the honorable Sir William Jones this book is presented as a small mark of the esteem in which the character of Sir William is held by his most obedient servant Thomas Pennant London March 27th. 1792."

Alberti, V. Gottis and Nouvian), 1-15+15(bis) (Zoophytes; 13 col.; by Borromée and Oudart). Paris.

The entire report of the voyage of the Vénus occupies 11 vols. of text and 4 vols. of plates, and was issued from 1840-64. The ornithological portion of the account of this voyage was written by Prévost and Des Murs and occupies pp. 177-284 of the volume on zoology, collated above. The volume was issued entire in July 1855 as Vol. V, Pt. 1 of the entire "Voyage," but portions of it appeared earlier, that on the birds in 1849 (Cf. Sherborn, *Ann. and Mag. Nat. Hist.* Ser. 7, Vol. 8, p. 492, 1901.). The plates appeared in 1846 with the list which accompanies them, and as they contain the new scientific names, the latter must be quoted from the plates and not from the text. The two volumes at hand are richly bound with pigskin lining, and contain the bookplate-impression of Henry Arthur Johnstone.

A general account of an expedition to the Desert of Atacama Chile. The birds are treated briefly on pp. 161-165 and pll. (Zool.) III-V, where two new species are described, both of which were published earlier in other places. An edition in Spanish was issued at Halle contemporaneously with the German one collated herewith; the prefaces in both are dated September 3, 1858.

The narrative of the European settlement of Australia under Governor Phillip, compiled from official records and other sources. Incidental remarks are made regarding birds, both in the general account and in the portions of the work taken from the journals of Lieuts. Ball and Watts. Special discussions of various animals of the region are found in Chapters XV and XXII (pp. 144-168 and 267-298), much of which relates to birds. These are usually ascribed to Latham, to whom acknowledgement is made by the editors for unspecified drawings and descriptions. No binomial names are used herein, but Latham included some of the species (many of which are here figured for the first time) in his "Index Ornithologicus," 1790 (q.v.). Second and third editions of the present work were issued in 1790, and German and French editions in 1791. The last plate is dated November 26, 1789; the dedication, November 25, 1789.

The preface of the entire volume and the imprint on the reverse of the title-page are dated December 1891, but Pt. V appears to have been issued the year afterward. The preface of Pt. I is signed Dec. 18, 1888; the subtit.-p. of Pt. II is dated on the reverse, October 1889, and the preface of that part, September 13, 1889. The duplicated page (p. 431) appears to be a reimpression without change. Although this volume is entitled Vol. II, no Vol. I was issued before or afterward, and an evident intention to publish similar volumes on other groups of Russian birds was never carried out. The present work is printed with the general text in both Russian and German, in parallel columns.

A report on the mammals and birds of Madagascar, based on the collections of Pollen and Dam, but including all known forms whether secured by these investigators or by other workers. Numerous new species are described, but some of these were previously described in other places. The present volume is No. 2 of the series which consists of 5 volumes, all that have been published. Vol. 2 was issued in 4 livraisons, of which I-III appeared in 1867 and IV in 1868 according to current reviews in the Ibis. Authorship of this volume is by Schlegel and Pollen, but the exact portion attributable to each is uncertain. The ornithology occupies pp. X-XIX and 30-163, 165-166, 168-171, 172 (pt.) 173-174 and portions of the indices. The plates are very good.

An account of the birds of Europe, discussed under vernacular names but with some synonymy presented for each species. Only a portion of the avifauna of Europe is discussed, with the apparent intention of adding later volumes, which, however, were never issued. The colored plates are steel engravings, hand-colored. An appendix (pp. I-XII) treats of bird collecting and preservation, illustrated by the uncolored plates. This volume is a revision of Lemaire's earlier (1846) work of the same title forming the third volume (Ser. 2, No. 1) of the second edition of the "Bibliothèque Zoologique." The first edition was published in 1837 (Cf. Lemaire, *Bibliothèque Zoologique* > *Hist. Nat. des Ois. Exotiques*, 1836).

1 vol. post 8vo, pp. I-XXXI + 1, 1-458, 1 l. (imprint), pp. 1-47 (advt.), 35 pll. (2 col., by G. E. Lodge; 1 fold.), text-figs. 1-50. London.

According to the author's preface, the book is a study of bird life from the point of view of the evolutionist. There is considerable information and some speculation in the work. A preliminary title-page assigns the book to a place as Vol. II in "Animal Life | an evolutionary natural history" to be issued in four volumes.

A catalogue of the birds of Caucasia, with systematic and distributional notes on each species and descriptions of several new forms. The work appears to have been issued in four parts, but I am unable to distinguish each part. At the meeting of the Deutsche Ornithologische Gesellschaft on May 5, 1884, the first lieferung (probably with 2 pll.) was presented. At the meeting on September 1, 1884, 2 parts (embracing lieferungen 2 to 16 and 12 pll.) were presented. The Ibis for January 1885 reviews three parts of the work (including pp. 1-480 (?) and pll. I-XVI). The entire work was reviewed by Madarász in the "Zeitschr.f.d.Gesammte Ornith." for January 1885; the preface of the work is dated August 1884 and the title-page, 1884; so the final work probably appeared near the close of the year 1884. Pages 588 and 589 contain a first supplement to the work. The second supplement was published in the "Journ. f. Orn." XXXIII Jahrg., pp. 74-81, 1885. The third and fourth supplements were published in the "Ornis" for 1887, pp. 457-500; and 1890, pp. 400-441, respectively. A reprint of the fourth supplement, paged 1-43, is inserted in the present copy, together with a portrait of Radde extracted from the "Ornithologische Monatschrift, Vol. XII, 1903.

All published of a work intended to describe and figure "ten or more species (in as many parts) of such birds as are found in the North-eastern portion of the United States, most attractive for their plumage colorations." Much of the text is quoted from other authors; the remainder is written in attempted literary style but with an inexperienced hand, and is full of poetic fancies and allusions. The species treated are the Purple Finch, Rose-breasted Grosbeak, Goldfinch, Yellow Warbler and Redstart. Part I is dated 1880; II, 1881; III-V, 1882. The original price was \$1.00 per part. The present set is in original wrappers.

the extended remarks by Salerne. The book, like Ray's "Synopsis" is posthumous. The subject matter consists of a review of the birds of the world, with brief descriptions, notes on distribution and habits, vernacular names, and other such matter. The volume was intended to form one of a series of which at least one other part (on "La Lithologie, la Conchyliologie et la Zomorphose," by Ant. Jos. Dezollier d'Argenville) was issued, in 1742-57. The interleaved plates from the Sonnini edition of Buffon's "Histoire Naturelle," 1800-05 (q.v.) are extraneous.

A recent edition of this popular, pocket-sized handbook for the identification, in the field, of the common eastern land birds of North America. The first edition was published in 1906. A colored figure is given of each species, together with a brief discussion of each and with a "field key" at the close of the volume. The colors of most of the figures are less accurate than in the early editions of the work. The volume forms Pt. 2 of the "Bird Guide," being accessory to a similar volume on water birds. Part of the original work,—precursor of Reichenbach's "Die Vollständigste Naturgeschichte," 1845-63 (q.v.); catalogued by Engelmann as "Der Naturfreund, od. praktisch Gemeinnütz. Naturgesch. des In- und Auslandes," etc., 1834-43. The text at hand consists of a list of the figures on the plates, (1-408, Schwimmvögel; 417-731, Sumpfvögel), with vernacular and scientific names and the habitats of the species. The plates are missing. In general, the numbering of the figures as indicated in the text shows no affinity to that of the figures in the "Vollständigste Naturgeschichte," but in a few cases (Albatrosses and Flamingoes), the numbering agrees and points to a probability that some of the figures of the present work were adapted for use in its successor.

Under the above title are grouped various parts of a detailed, comprehensive work which was issued under a variety of cover-titles at irregular intervals in a most confusing manner. The entire work is extremely puzzling as to arrangement and method of appearance and I can find no complete and accurate collation of the various components. As nearly as I can decide from available material and references, the history of the work is somewhat as follows.

The book started as "Der Naturfreund, oder praktisch-gemeinnützige Naturgeschichte des In- und Auslandes," 1834-43. Of this early work, two parts are present in the set at hand (Cf. *Praktisch-gemeinnütz. Naturg. der Vögel*, 1836-?). In 1884, the title was changed and the work continued (or begun anew) as quoted above. Several numbers of plates were issued under subtitles of "Die vollständigste Naturgeschichte der Schwimmvögel [Sumpfvögel], etc., 1845-48 (q.v.), shortly thereafter followed by installments of text. At first, the text consisted merely of a "Synopsis Avium" or list of species containing references to the illustrations. These synopses were continued for five groups of birds, the Natatores to the Gallinaceae, and were considered as Nos. I-III of a series, although I and II are not actually so numbered. They were issued in 1847 and 1848. The series of plates includes many not discussed in the "Synopsis" (apparently being of later issue), and to discuss these, a

leaflet called, "Novitiae ad Synopsin Avium", Nos. IV-VII (VI being missing from the present set) was issued from time to time in 1850 and 1851. At the close of each number of this "Novitiae," is a summary of the plates published to date in the respective groups of birds, arranged according to classification, with necessary interpolations.

In the meantime a series of uncolored plates of anatomical details was published in four parts in 1849 and 1850 under the title of "Avium Systema Naturale," without accompanying text. The text appeared in 1853 as *Lieferung 3* of the "Handbuch" (mentioned below). In 1851 the plates were continued, beginning with the Alcedineae and running through the Picinae but excluding the Trochilinae. There were five fasciculi of these plates, each of which was accompanied (or shortly followed) by a descriptive text entitled, "Handbuch der Speciellen Ornithologie." The various parts of this text were each prefixed by a list of species, with plate-references, entitled "Incones ad Synopsin Avium," sometimes paged with the text, sometimes unpagged, and numbered VIII-XII in continuation of the "Synopsis" and "Novitiae." The original wrappers of these parts are marked as *Lieferungen 1, 2, 4, 5* and *6*. *Lief. 3* comprised the text of the "Avium Systema Naturale" and *8* is said to have been the first portion of the special text relating to the pigeons (mentioned later); *7* and other numbers subsequent to *8*, if any, I can not trace. The five parts properly belonging here are dated from 1851-1854. Following the Picinae, the plates of the Trochilinae appeared from 1855 to 1857, but, instead of the regular text, a revision of a former brief paper by the author was published with the first of the plates in 1855, under the title of "Trochilinarum Enumeratio;" this serves as the only available letterpress for the plates of this group.

The pigeons, already briefly treated in the "Synopsis" and "Novitiae VI" were taken up in detail in a special paper called, "Die vollständigste Naturgeschichte der Tauben," of which the first part was issued in 1861 as *Lief. 3* of the "Handbuch." A second part, with 9 new plates, appeared as *Lief. 9* and *10* of the "Central Atlas" but it was paged in continuance of the first part. The portions of the first part of the volume which deal with the Curassows and Guans (pp. 129 pt. -160) appear to have been issued also in another form as *Lief. 1* and *5* of the "Central Atlas." This "Central Atlas" seems to have been a medium for producing miscellaneous addenda to the earlier parts of the book and contains a number of papers on Mammalia belonging to *Abtheilung I* of the entire work. *Lieferungen 1, 5, 9* and *10* have been mentioned. *Lief. 6-8, 11-13* and *17-19* were issued in 1862 and 1863 and contained a descriptive account of "Die Singvögel" (as far as completed) with 51 plates, separately numbered.

Two other titles are sometimes considered as part of the above general work, the "Deutschlands Vögel," 1842, and "Die Vögel Neuhollands," 1845-50. Both seem to have been issued also separately, the former as part of "Deutschland Fauna"; the latter, at least, utilized the plates of the larger work.

In the volume on Natatores examined, there are 8 leaves of text relating to pll. 1-14 as finally arranged, which I am unable to place satisfactorily (Cf. *Die vollst. Naturg. der Schwimmvögel*). The plates exhibit a multiplicity of styles of numbering which I have discussed under the separate portions of the work where they appear. Detailed collation of the various sections may be found under the following heads.

 1861-62.). "Gallinaceae", engr. tit., pll. 281-390 (col.: 321b, 365a-
 365ag and 365b incl. in vol.; cf. "Die Haushühner" 1848?) Dresden
 and Leipzig.

The plates of the Natatores to Gallinaceae are found under the above-quoted
 engraved title-pages. There appear to be several styles of issue represented
 here. Some of the plates are of full size on heavy paper; others are smaller on
 a poorer quality of paper, some of these being remounted on larger, heavy
 paper to agree with the rest of the set. The only text for most of these plates
 is found in the "Synopsis Avium" and the "Novitiae ad Synopsin Avium,"
 1847-48 and 1850-51 (q.v.). The Columbariae are further treated in "Die
 Vollständigste Naturgeschichte der Tauben," 1861-62 (q.v.). A few of the
 plates of the Gallinaceae seem to belong to a separate issue entitled, "Die
 Haushühner, 1848? (q.v.).

The numbering of the plates is very confusing. Throughout the entire
 series (except the plates of "Die Singvögel," the "Avium Systema Naturale"

and a few others) each plate bears a serial number in the upper right-hand corner. This serial number runs from I to DCCCLV and seems to indicate, in a measure, the order of preparation of the plates. From the Natatores to the Gallinaceae, it is the number used for reference in the "Synopsis Avium."¹

Some of the plates carry a "Suppl." number in the middle of the upper margin. This number indicates the position of these plates as they are to be interpolated in the series; the plates marked in this way were probably prepared correspondingly later than most of the regular series, judging by the higher numbers given to the individual figures of birds on them. The "Suppl." number, however, is not used for any reference in the text.

A further set of the plates of the Natatores—Gallinaceae have a third number, prefixed by "Novit." in the upper left-hand corner. These plates are not discussed in the "Synopsis" and appear to have been issued after the publication of the corresponding portions of that pamphlet. On the middle of the upper margin of these plates there is still a different number with a qualifying letter (such as XXXb, XIa, etc.), indicating the position of each plate in the primary series. These plates are discussed (with a few exceptions) in the "Novitiae" where all three of their numbers are used for reference.

In addition to the above enumerations, a table is given at the close of each number of the "Novitiae," showing the final arrangement of all the plates issued to date in the respective portions of the work and assigning an Arabic numeral (sometimes qualified by a letter) to each plate. These Arabic numerals are placed, or it is requested that they be placed, at the bottom of the plates in question, where sometimes they may be found in the series from the Natatores to the Gallinaceae. In the descriptive text to the Columbariae, they are used as reference-numbers. With the exception of the additional plates of "Die Haushühner" and of the Columbariae, they may be checked by the lists in the various numbers of the "Novitiae." With the further exceptions of 111a, 111b and 197b (= 391) and lacking 278-280, they are continuous throughout this series.

The dates of the plates are not definitely ascertainable, but as only those of the Natatores which are treated in the first number of the "Synopsis" are named on the plates, most of the dates are unimportant. The work appeared in livraisons of about 10 pll. each as is indicated by notes in some of the numbers of the "Synopsis": Natatores, Grallatores and Fulicariae et Rallariae (I-CXX-IX), 13 livrs.; Columbariae (CXX-CLXXVIII), 5 livrs.; Gallinaceae (CLXXIX-CCLXIII), 12 (?) livrs. Assuming that the plates discussed in the "Novitiae" (but not in the "Synopsis") appeared after the "Synopsis," the inclusive dates may be indicated thus (after data from Meyer's "Index zu L. Reichenbach's Orn. Werken"). Natatores, Febr. 20, 1845- (post) 1848. Grallatores, June 3, 1846- (post) 1848. Fulicariae and Rallariae, Dec. 30, 1846- (post) 1848. Columbariae (pll. 220-277), June 16, 1848. Gallinaceae (pll. 281-390), June 16, 1848.

At the beginning of the volume on Natatores there are 8 leaves of text relating to pll. 1-4 as finally arranged; since certain "Novitiae" plates are included these leaves must date after the "Synopsis I." This text I am unable to place in its proper position as regards publication. The pages are the full size of the

plates (8x10 $\frac{3}{4}$) and the brochure is entitled, "Die Vögel"—"Ordo Primus"—"Natatores." Each page, after the title-leaf, treats of one plate and gives the name and distribution of the species figured.

The catalogue of species figured on the original series of plates in Reichenbach's "Die Vollständigste Naturgeschichte de Schwimmvögel [—Huhnervögel]," 1845-48 (q.v.). References are given to the plates by their original numbers (afterwards changed). Additional plates subsequently published for these same groups are catalogued in the "Novitiae ad Synopsin Avium," 1850-51 (q.v.). There are no special title-pages; the above titles head the initial pages in the various parts. Pt. III is from a French edition of the work. The engraved title-page of the Columbariae, which contains 56 numbered figures of domestic pigeons, is treated as a plate and its figures are named in the text.

The above title is quoted from Carus and Engelmann. No text is cited there for this work. The volume of the Gallinaceae in Reichenbach's "Die Vollständigste Naturgeschichte der Schwimmvögel [Huhnervögel]," 1845-48 (q.v.) contains 15 plates of domestic fowls, Nos. 365a-365ag and 366-373, which probably form the illustrations included under the above title. Of these, 366-373 belong to the regular issue of the plates of the Gallinaceae; the remainder are probably of special issue for this present work. No definite date is available.

The descriptive text and plates to the groups from the Alcedineae to the Picinae (excepting the Trochilinae) in the author's "Die vollständigste Naturgeschichte," 1845-63 (q.v.). Each part is prefixed by an "Icones ad Synopsin Avium" consisting of a list of species with references to plates and figures, somewhat similar to the "Synopsis Avium," 1847-48, and "Novitiae ad Synopsin Avium," 1850-51 (of the Grallatores to the Columbariae), and numbered in continuation of those series. The portions collated under this title were issued in 5 Lieferungen under the cover-title of "Handbuch der speciellen Ornithologie." Lief. I contained Icones VIII with text and plates; 2, Icones IX, etc.; 3, (original wrapper not present) consisted of the text to the "Avium Systema Naturale," 1849-53 (q.v.), not included under the present title; 4, contained Icones IX (=X), etc.; 5, Icones XI, etc.; 6, Icones XII, etc.³ The Trochilinae should have begun in Lief. 5 but were deferred until later, being issued eventually without other text than the "Trochilinarum enumeratio," 1855-57 (q.v.). A few of them may have constituted Lief. 7. Lief. 8 appears to have consisted of the first part of "Die Vollständigste Naturgeschichte der Tauben," 1861-62 (q.v.).

The plates in the present series are numbered primarily as shown in the above collation but some of them, which were prepared out of proper sequence, bear an additional number with a qualifying letter indicating their proper place in final arrangement; thus "CCCCIIb=CCCCLXXVII" or "CCCC-XVIII=CCCCIXb." Some of the plates have been transferred to a very

different section of the work. Plates adjacent to the original position of these transferred numbers carry an inscription indicating the consequent hiatus in the continuity of the series at these points.

These plates deal entirely with the details of heads, feet, wings and tails of birds, illustrating the various genera and forming a sort of introduction to the author's "Die Vollständigste Naturgeschichte," 1845-63 (q.v.). They were possibly issued as cited in the titles but are grouped in nine sections, each under a special, engraved subtitle as follows. Natatores, pll. I-X, Grallatores, pll. XI-XVIII; Rasores, pll. XIX-XXXII; Insessores Investigatores, pll. XXXIII-LI; Insessores Trepidatores, pll. LII-LXXI; Insessores Enucleatores, pll. LXXII-LXXXVI; Insessores Raptatores, pll. LXXVII-C. The text, whose preface is dated October 1, 1852, contains a general review of the classification of birds, with a systematic catalogue of genera and typical species, but includes only the Natatores to Gallinae; apparently it was never completed. It was issued as Lieferung 3 of the "Handbuch der Speciellen Ornithologie," 1851-54 (q.v.), but is paged separately and has no direct connection with that title except as both are parts of the same general work. Richmond (Proc. U. S. Nat. Mus. 53 p. 615, footn. 1917) regards the actual date of publication as 1853. References are given to the plates and figures in the "Vollständigste Naturgeschichte."

The catalogue of the species which are figured on the plates published subsequently to those listed in the "Synopsis Avium," 1847-48 (q.v.). Three numbers are used for reference, all three of which appear on the plates in question,—the original serial number, a "Novitiae" number (so designated), and a number defining the position of the plate in the complete series (Cf. "Die Vollständigste Naturgeschichte der Schwimmvögel," 1845-48.). At the close of each number of the "Novitiae," there is a table of the complete series of plates to date, in the group treated, with an Arabic numeral for each.

A second, revised edition of the author's "Aufzählung der Colibris," 1854 (issued with *Journal für Ornithologie*, Vol I), probably published for the purpose of forming a sort of "Synopsis Avium" for this group to accompany the plates in the author's "Die Vollständigste Naturgeschichte," 1845-63. References are given to pll. 679-805 (numbered in Roman on the plates) and a dotted line with "Rchb. t." provides space for the future numbering of the species listed but not yet illustrated. No other text appeared for the hummingbirds. The plates (according to A. B. Meyer's "Index zu L. Reichenbach's Orn. Werken," 1879) appeared from July 18, 1855 to January 12, 1857; the text on July 18, 1855. The plates are numbered consecutively without interruption from DCLXXIX to DCCCLV.

A complete descriptive text to the pigeons and their allies (as classified by the author). The plates cited above in brackets belong to the original series of "Die Voll. Naturg. der Schwimmvögel [Tauben]", 1845-48 (q.v.), listed in the Synopsis Avium," 1847-48, and the "Novitiæ," 1850-51¹. Pp. 1-128 appear to have been issued regularly in 1861 but regarding the rest of the first part of this volume there is some uncertainty. In footnotes to pp. 3 and 4 of "Die Singvögel," 1862-63 (q.v.), the statements are made that the genus *Penelope* was specially treated in Pt. V of the "Central Atlas" and that Pt. I of the same dealt with the Hocco's (Curassows). In the present volume, the Curassows occupy pp. 129 (pt.)-141 (pt.), and *Penelope* with its allies, pp. 141 (pt.)-160, agreeing with the number of pages for Pts. I and V of the "Central Atlas" as catalogued by the British Museum (Natural History). As exhibited by the copy at hand, however, the letterpress for these two groups is inseparable from the rest of the volume and indivisible on account of overlapping text and signatures, so the same reading matter may have been issued both as part of the present volume and as Pts. I and V of the "Central Atlas." A review in the Ibis for October 1861, p. 405, announces the complete account of the Columbariæ, including the family Cracidae, as appearing in the eighth Lieferung of the "Handbuch der speciellen Ornithologie," which would imply that the whole of the first part came out entire. According to a footnote on p. 205 of Pt. II of the present work, pll. 272b and 273b appeared with the "Central Atlas" No. 1, but they are discussed, not in the text on the Curassows in Pt. I, but in Pt. II. Pt. II, with pll. "Novit." I-VII and VIII-IX (=271b and 271c), appeared later, in 1862, as Nos. IX and X of the "Central-Atlas."

³On p. 726 of this volume, the date of publication of the first part is said to have been June 1902, but Hellmayr, in Archiv. für Naturg., II, Heft. 1 p. 117, 1902, says it appeared in August.

A handbook of the birds of Germany, with synoptic tables but no descriptions. Latin names are given, with the date of original publication, and one or more vernacular names are added. Synonymy is restricted to the names adopted in Naumann's "Naturgeschichte der Vögel Deutschlands," 1822-60 (q.v.), and Reichenow's "Systematisches Verzeichniss der Vögel Deutschlands," 1889.

The ornithological portion of Reider and Hahn's "Fauna Boica," consisting of Lieferungen 2, 8, 12, 29, 16, 17, 18, 20 and 22-27 [in the order of appearance, according to the Cat. Libr. British Museum (Nat. Hist.)], and forming Part II of the complete work. Under its separate subtitle of "Deutschlands Vögel" it is, itself, divided into Parts I and II. Most of the ornithology is by Hahn whose name appears alone on the subtitle-page. The general text (unpaged) consists of descriptions and discussions of the various species which are figured on the plates. Most of the signatures are signed by Hahn, many are unsigned, and at least one is followed by Reider's name. A general review of the contents is given on the numbered pages in Vol. I, where the plates, themselves unnumbered, are catalogued as if numbered in sequence from 1 to 182. The nomenclature of this review is not consistent with that of the general text nor that of the plates, nor do the text and plates always agree in this respect.

An important work on the birds of North America north of the forty-eighth parallel. Detailed descriptions are given, with synonymy and critical remarks, and there are lengthy discussions (by Swainson) on the Quinary System of classification with relation to the species treated or in general. The authorship is divided. In general Swainson is responsible for the classification and synonymy and Richardson for the actual descriptions, with most of Swainson's contributions further identified by his subjoined initial. Some of the new names are by one author, some by the other, and the remainder by both, as stated in each instance. The plates are by Swainson. The work exists, also, with uncolored plates. The date on the title-page is 1831, but Richmond (Auk, 1899, p. 327) gives February, 1832 as the correct date. The work is first mentioned in the Magazine of Natural History for March 1832 (p. 186), as having been published in 1831, and it is reviewed in the same periodical for May, 1832 (pp. 360-364), as having appeared in 1832. Swainson, himself, in his "On the Natural History and Classification of Birds" in Lardner's "Cabinet Cyclopaedia," Vol. I, p. 218, 1836-37 (q.v.), cites the work under date of 1831 as "1 vol. in 2 parts." If the latter statement is not misleading (on account of the entire ornithological volume forming the second part of the "Fauna"), it is possible that a Pt. I of the "Birds" (limits unknown) was issued in 1831, and the remainder in 1832. I can find no confirmation of the statement by Swainson. The work is sometimes quoted as "Northern Zoology." In a portion of Swainson's controversy with Vigors, in a letter written October 1, 1831 and published in the Mag. Nat. Hist. 4, p. 483 (Nov., 1831), Swainson refers the reader to "North. Zoology, vol. ii, p. 315," saying that, "I have there, long ago, spoken," etc. This implies, but does not prove, that p. 483 of the work in question had been published at least by the 1st of October, 1831. Robert Jameson, in his edition of Wilson's "American Ornithology," 1831 (q.v.), 4 pp. 244-362, gives some extracts from the proof sheets of the present work intermixed with selections from other authors and personal remarks of his own. It is possible that these pages from Jameson antedate the publication of the present work.

The zoological report of the expedition of the Erebus and Terror to New Zealand and Antarctic regions. The section on birds (pp. 1-39 of Vol. I) consists of a report on the birds of New Zealand by G. R. Gray and an appendix to the same prepared by R. B. Sharpe. Gray's original paper was published in parts (as was all of the work) at dates which are not all definitely known. Sherborn (*Index Animalium*, Sect. 2, Pt. I, p. XLIX, 1922) cites pp. 1-8, 1844; and 9-20, 1845. To this, Mathews (*Birds of Australia*, Suppl. 4, Pt. I, p. 61, 1925) adds from Newton and Pucheran (references not given) the information that pp. 9-12 were issued in Pt. IX in June 1845, and 17-20 with pl. 21 in Oct. 1845. Pp. 21-39 and pll. 1, 7, 20*, 27, 29, 30, 31 and 32 are cited in the *Zoological Record* for 1875, being the portion published by Sharpe. A complete list of the plates issued originally, and those issued with the appendix, is given by Sharpe on pp. 38-39 of the present work, Vol. I. A new title-page, or subtitle, is supplied for the ornithology (and similarly for most of the other sections of the work). This differs from the general title-page in the date, here given as "M.DCCC.XLVI.-M.DCCC.LXXV.", and in lines 13 and 14 of the original which are here replaced by the following 6 lines, "Birds. | By | George Robert Gray, F.R.S., &c., | and | R. Bowdler Sharpe, F.L.S., F.Z.S., &c., | Of the Zoological Department, British Museum."

Pp. 11-57 are occupied by a check-list of species and subspecies with vernacular names and a serial number for each. An appendix is given on pp. 59-84 with tabulated lists of species eliminated from former catalogues; added since former catalogues; provisionally included in the check-list; known to be stragglers; supposedly valid but not found since described by Audubon or Wilson; variously restricted in distribution; recently described but untenable; introduced from foreign countries or escaped from confinement; etc. P. 85 contains addenda; pp. 86-87, a table of families showing number of genera and species of each; pp. 87-89, a concordance of the serial numbers of the present check-list with those of Baird's "Catalogue of North American Birds" of 1859 (Cf. same tit., 1858.). The present paper is said by the author to be "a revised edition, very materially modified" of his own former catalogue, published in 1880 on pp. 163-246 of Proc. U. S. Nat. Mus. 3, but not issued separately.

This monumental work, still in course of publication, is a detailed, taxonomic monograph and the most complete book of its kind ever attempted. It is indispensable to the systematist of North and Middle American ornithology. The actual dates of publication of Vols. I-VII are given in the preface (p. III) of Vol. VIII. The dates are as follows. Vol. I, Oct. 24, 1901; II, Oct. 16, 1902; III, Dec. 31, 1904; IV, July 1, 1907; V, Nov. 29, 1911; VI, April 8, 1914; VII, May 5, 1916; VIII, June 26, 1919 (rev. Auk).

Each volume contains a list of the contents of all volumes to date.

A detailed account of the birds of prey of Germany and adjacent parts of Europe. The discussion of each species is divided into sections on description, distribution, life-history and methods of hunting. According to a contemporary review in the Zoological Record, the nomenclature adopted is antiquated even for that date. The chromolithographic plates vary in quality; some of them are very fair. The work was issued in parts of which the Zoological Record for 1876 records the first; the same journal for 1877 records the apparent conclusion of the work with Pts. II-XII of text and II-XIV of plates, but the introduction (p. XVI) is dated 1878.

A critical review and catalogue of the collections of the Rijksmuseum van Natuurlijke Historie. As presented, the work consists of a series of separately paged monographs of different groups. As will be noted, Vol. VII deals with mammals; all the remaining volumes except IX (Index) are ornithological. Numerous new species are described. Vol. IX (Index) is by Jentink and Vol. I, pp. 1-98 (Buccones) is by Goffin; the remainder of the work, as here collated, is by Schlegel. More recently, in 1907, Vol. X has been published, consisting of a catalogue of avian fossils by E. D. van Oort. This volume is not in the series at hand. The work appeared in 14 livraisons (excluding Vol. X). Each monograph is dated separately on its initial page but the dates appear to be those of the completion of the manuscript or of printing, not of publication, although they sometimes furnish approximate dates for the livraisons in which they appeared. The approximate dates and the contents of the various livraisons are as follows.

Livr. 1, tit. and pref., Buceros, Falcones, Aquilae, Astures, Asturinae and Butsones, 1862 (post Oct. 30—date of pref.). Livr. 2, Milvi, Pernes, Polybori, Vultures, Oti, Striges, Circi, Pitta, Buccones pp. 1-66 and Aves Rapaces-Résumé General, 1863 (antea July—rev. Ibis). Livr. 3, Buccones pp. 67-98, Ardeae, Alcedines and Merops pp. 1-12, 1863 (post June—date of Merops). Livr. 4, Merops pp. 13-14, Momotus, Ibis, Pelecani, Procellariae and Lari, 1863 (post August—date of Lari). Livr. 5, Sternae, Cuculi, Psittaci and Scolopaces pp. 1-86, 1864 (post November—date of Scolopaces). Livr. 6, Scolopaces pp. 87-102, 1864. Livr. 7, Scolopaces pp. 103-112, Ciconiae, Cursores and Ralli pp. 1-76, 1865 (bet. April and October—date of Ralli and rev. Ibis). Livr. 8, Ralli pp. 77-79 and Anseres pp. 1-108, 1866 (post May—date of Anseres). Livr. 9, Anseres pp. 109-122, Coraces and Urinatores, 1867 (post April—date of Urinatores). Livr. 10, Struthiones, Columbæ and Revue des Oiseaux de Proie, 1873 (post July—date of Revue). Livr. 11, Revue des Brèves, Rev. des Perroquets and Rev. des Alcedines, 1874 (post June—date of Rev. des Alcedines). Livr. 12, Simiae, 1876 (dat. March). Livr. 13, Tinami and Megapodii, 1880 (dat. 1 vol. crown folio, tit., pp. 1-38, 4 pll. (3 fold.; by Edwards; 2 ornithological). London.

A sketch of the life of Edwards, apparently by Robson, occupies pp. 1-26. The remainder of the pamphlet consists of reprints of various papers by Edwards extracted from the Philosophical Transactions of the Royal Society of London, and two addenda to certain accounts in his "Gleanings of Natural History," 1758-64 (q.v.). An erratum is given for Linne's "Catalogue of the Birds..... contained in Edwards," (q.v.) published the same year, with a copy of which the present title is united.

Robson was the purchaser (May 1, 1769) of all the remaining copies of Edward's Natural History, the original copper-plates, letter-press and all articles in Edward's possession relative to the same. The unpublished drawings, however, were purchased by the Earl of Bute.

1 vol. 8vo, pp. I-LVI, 1-320, frontisp. (portr.), 1 map (fold.). London.

Miscellaneous ornithological notes made by E. H. Rodd and published, from time to time, in *The Zoologist*, from 1843 to 1880. These notes, transcribed in chronological sequence, have been rearranged by the editor to bring together the various portions dealing with each species, as begun by the author prior to his death. The appendix, by the editor, contains notes for insertion in the text. Pp. 281-298 contain "A few leaves from the journal of a sportsman and naturalist on the Scilly Islands," by the author's nephew, F. R. Rodd.

1 vol. imperial 4to, cover-tit., 1 l. (subtit.), pp. 81-288. Jena.

A systematic review of the birds of the Arctic Ice-sea and its islands, with considerable synonymy, some descriptions, and notes on the distribution and time of occurrence of each of the 270 forms of birds included in the discussion. A lengthy bibliography precedes the general text, and distribution-tables and a comparative study of the Arctic and Antarctic avifaunas are appended. The work, entirely by Schalow, forms No. 2 of the first livraison of Vol. IV of the "Fauna Arctica" edited by Römer and Schaudinn and published in five volumes, 1900-10. The title transcribed above is from the original wrapper which bears the date 1904, the year in which the work was reviewed by Hellmayr in the Archiv für Naturgeschichte, although later bibliographers have quoted the date as 1905. The present copy is autographed by Schalow who presented it to Tschusi zu Schmidhoffen.

The narrative of the exploring expedition made during the year 1818. Various observations on natural history are noted from time to time in the general text and the complete "Zoological Memoranda" are found in Appendix No. 2, of which pp. XLVIII-LXIV and 1 pl. (col.) relate to birds. Captain Edward Sabine was attached to the expedition for the purpose of assisting in the

observation and collection of natural history data and specimens, and was placed in charge of this branch of the work by Captain Ross. On the return of the expedition, Sabine declined to furnish any report on the grounds of lack of ability and knowledge of any branch of natural history except ornithology, yet he published "A Memoir on the Birds of Greenland" (Trans. Linn. Soc. London, **12**, pt. 2, pp. 527-559, pl. 30, 1819) based on his notes of the voyage. The zoological report in the present work is accredited by Ross to John Edwards and C. J. Beverly, Surgeon and Assistant Surgeon, respectively, of the Isabella, and to W. E. Leach who revised the paper. Leach and Joseph Sabine, brother of Edward Sabine, previously described the new species of birds in the Trans. Linn. Soc. London, **12**, pt. 2, pp. 520-523, pl. 29, 1819 (Sabine) and Thomson's Annals of Philos., **13**, pp. 60-61, 1819 (Leach). The final plates in the book are dated as being published March 1, 1819.

A collection of papers of miscellaneous ornithological nature, issued in 14 parts at irregular intervals. The first numbers were written entirely by Rowley, but the work, as it progressed, included contributions by various other authors and partook somewhat of the nature of a periodical. A number of important papers are included in the three volumes, being published in instalments. The dates of each part are given in the containing volume. The original covers, with dates, are bound in with the text in the present copy.

The zoology of Rüppell's journey in northern Africa and the district of the Red Sea from 1822-27. According to Engelmann, the work appeared in 20 parts. The ornithological portion was written by Cretzschmar and contains descriptions of the species of birds (some of them new), all of which are illustrated on the 36 colored plates in this section of the work. The subtitle of this section bears the date 1826 but Rüppell, in his "Neue Wirbelthiere," p. 50, quotes pl. 28 of the present work under date of 1827. In the *Zoological Journal*, IV, p. 385, (for Oct. 1828 to Jan. 1829), Pts. I-VIII of the work are reviewed in detail. The eight numbers are credited with six plates each, including some plates belonging to other non-ornithological sections of the work; their ornithological contents embrace pp. 1-38 and pll. 1-25. A second "Abtheilung" was intended to contain the geography of the expedition, but was never issued as such; the "Reisen in Nubien," etc., 1829, and the "Voyage dans l'Afrique et en Nubie" 1826 et seq., appear to constitute the equivalent. A continuation of the present portions of the work is found in the "Neue Wirbelthiere zu der Fauna von Abyssinien gehörig," 1835-40 (q.v.).

A continuation of Rüppell's "Atlas zu der Reise im nördlichen Afrika," containing descriptions of new mammals, birds, reptiles and fishes. The work appears to have been issued in 13 Lieferungen (according to the preface) during the years 1835 to 1840. A review, in the *Magazine of Zoology and Botany*, 1, No. III, p. 275, 1846 (after Aug. 25), records 6 parts issued at intervals of three months beginning January 1, 1835. Two ornithological parts are included in this review, embracing pll. 1-12 and pp. 1-32. On p. 109 of the *Mag. Zool. Bot.* 1, No. 1, 1837, is the statement that each of the first four fasciculi was devoted to a separate section of the subject, so that part 1 of the birds (pp. 1-16 and pll. 1-6) seems to be properly dated 1835. Part 2 of the birds is probably referable to 1836. Page 81 must have been published in or after March 1837¹; p. 94 in or after 1838²; and p. 99 in or after 1839³. The preface is dated May 1, 1840. The author's "Systematische Uebersicht der Vögel Nord-Ost-Afrika's," 1845 (q.v.), is supplementary to the present work.

The present work is divided into two parts. Part I contains an annotated list of the species of birds known from Connecticut. Part II (pp. 259-360), by Bishop, alone, contains a discussion of economic ornithology arranged according to the natural groups of birds. A bibliography of Connecticut ornithology is presented with Part I.

The mammalogy and ornithology of Ramon de la Sagra's history of Cuba. This work was issued, 1839-61, in two editions, Spanish and French,—the former probably the earlier although both bear the same dates on the respective parts. Engelmann divides the publication into 75 livraisons and quotes the mammals and birds in one volume (as above) as well as in two volumes, separately. The ornithological portion, by d'Orbigny, dates from 1839. Probably only 32 plates (I-XXXI and XIX bis) were issued originally; the list of plates in the Atlas tabulates only these and there is evidence that the final plate of eggs (pl. XXXII) was not issued until 1843 (Cf. Sagra, *Album d'Oiseaux de Cuba.*). The work contains a summary of the knowledge of Cuban birds to date, as well as descriptions of the new forms contained in de la Sagra's collections. The present copy contains the autograph of Wm. Jardine on an original wrapper which is bound in the volume of text.

2 vols. in 1 vol., demy folio and medium folio. Text, pp. 1-16. Atlas, 2 ll. (tit. and conts.), pll. I-VII (col.; mammals), I-XXXII+XIXbis (col.; by Prêtre, E. Traviès and Hublier; birds). Paris.

The present work is somewhat puzzling. The text appears to consist of a very general discussion of the rich variety of Cuban bird-life, followed by a synoptic list of species supposedly copied from d'Orbigny's arrangement in de la Sagra's "Histoire Physique, Politique et Naturelle de l'Ile de Cuba, Ornithologie," 1839-40 (q.v.). As printed in the present book, the list presents a great number of changes from the original,—most of the changes being alterations in spelling, two of them being changes of genera, but probably all of them being due to errors in copying. The authorship is in doubt, but, presumably, the entire work was arranged by the publishers. In the latter part of the text the announcement is made of the present issue of an album consisting of the ornithological plates from the "Histoire," together with an additional plate of eggs (=pl. XXXII) drawn from specimens received by Baron Delessert from José Ramon de la Paz Morejon. The album in which this letterpress is bound contains plates of both mammals and birds, prefaced by the same list of contents as in the original "Histoire." The title-page is reprinted with certain alterations; the vignette is redrawn; the word, 'Atlas,' is in plain, instead of ornamental, type; a line of print is withdrawn from above the last line on the page, and the address of the publisher is given as "Rue Hautefeuille 21" instead of "23," while general typographical changes are apparent throughout. The plates appear to be from the same copperplates except that the first of both mammals and birds bears the signature, "N Rémond imp. r. Vieille-Estrapade, 15, Paris." instead of "Bougeard imp." as on the originals and on all the remainder in the present issue. The coloration of the plates presents numerous variations from that of the examples of the original at hand.

A sumptuous monograph of the birds of Central America, forming part of the work treating of the complete natural history of the same region. Of the birds, 1413 species are treated and 149 figured. The present portion appeared in 74 of the 257 parts in which the work was issued. The various signatures are dated so that there is no need to collate the work by parts except as regards the plates. Salvin died in 1898 and Godman completed the work with the assistance of R. B. Sharpe and W. R. Ogilvie-Grant. All portions of Vol. III after p. 184 bear Godman's name, only, on the original wrappers. The plates appeared as follows (according to dates on the original wrappers). Pl. 1-3, Sept. 1879; 4, Nov. 1 vol. 8vo, pp. I-VII+1, 1-587, frontisp. (col.; after Audubon), pll. I-IV (eggs), 23 pll. (after Audubon), 38 text-figs. Boston.

An early edition of a work first published in 1867. It consists of technical descriptions and classification taken from Baird ("Pacific Railroad Surveys," Vol. IX, 1858), and general discussions of the species largely extracted from Wilson, Nuttall and Audubon, with some original matter. William Couper supplied notes on the occurrence and distribution of certain species in Quebec, on pp. 80-81, 368-372, 396, 477-478 and 571-573, as in the first edition (Cf. Coues.). An appendix, not in the original edition, is added on pp. 575-578 to include a few species recorded by various authors but not mentioned in the body of the work. The illustrations are from various sources. Those of the eggs were prepared by M. M. Tidd and Nathan Brown; the frontispiece and most of the unnumbered plates (one of which is an uncolored copy of the frontispiece) are copied from Audubon. The book passed through a number of editions under various titles, at least three of which were issued in 1883. Cf. Samuels, *The Birds of New England*, 1883, and *Our Northern and Eastern Birds*, 1883.

The present title covers the tenth edition of the author's "Ornithology and Oölogy of New England," 1867, from which it differs only in a new title-page, a different frontispiece and a more extended appendix on pp. 575-583. Couper's contributions are mentioned in the discussion of the edition of 1869 (q.v.). Another edition, under the title of "Our Northern and Eastern Birds" (q.v.) appeared also in 1883.

1 vol. royal 8vo, pp. I-VII+1, 1-600, frontisp. (col.; after Audubon), 34 pll. (6 col.; by A. Pope and after Audubon), 35 text-figs. New York.

This work, issued the same year as "The Birds of New England and Adjacent States, Tenth Edition" (q.v.), differs from that work in its altered title and title-page, the addition of 5 new colored plates after Audubon, a different frontispiece, 5 new drawings by A. Pope, the omission of several cuts and the revision of a small portion of the text. The Catalogue of the Library of the British Museum (Natural History) records another edition of the same title, date and publisher as the present one, with the addition of a supplement from Hodder's "American Fauna;" this work I have not seen. Couper's contributions are on pp. 80-81, 368-372, 394 (instead of 396 as in the 10th ed.), 477-478 and 571-573.

1 vol. post 8vo, pp. I-IX+1, 1 l., pp. 1-429+1, 1 p. (advt.), frontisp., 8 pll. New York.

A popular work forming one of the volumes in The American Sportsman's Library, edited by Caspar Whitney. Concise descriptions of the various species are followed by notes on habits and hunting experiences woven into a very readable narrative which contains a great deal of information. Pages 377-417 (on the quail and grouse of the Pacific Coast) are by Van Dyke; the remainder of the discussions are by Sandys. A companion volume in the same series is Sanford, Bishop and Van Dyke's "The Water-fowl Family," 1903 (q.v.).

1 vol. post 8vo, pp. I-IX + 1, 1-598, 1 l. (advt.), 20 pll. (16 bird-portrs., by Fuertes). New York.

A sportsman's reference book, with accounts of the habits of the various species of ducks and geese, rails and shore-birds of North America, prefixed by descriptions and notes on the distribution of each and interspersed with accounts of hunting experiences. The discussion of the waterfowl of the Pacific coast (pp. 503-564) is by Van Dyke, the general account is by Sanford, and a carefully prepared chapter on the diagnoses of families and genera is unaccredited but is ascribed to Bishop (together with other technical matter in the first part of the work) by the reviewer in the *Auk* 20, pp. 313-314, July 1903. The work forms one of the volumes in the American Sportsman's Library, in which a companion volume is Sandys and Van Dyke's "Upland Game Birds," 1902 (q.v.).

A critical list of the birds of New Caledonia and the Loyalty Islands, giving the detailed insular distribution of each, the specimens collected by the Sarasin and Roux expedition, and notes on habits, relationships, etc. Numerous new species and subspecies are described. The work as collated above constitutes the ornithological report by Sarasin, forming part (Vol. I, Lief. I) of a complete report on the expedition to the islands in question, and should be quoted as Sarasin in Sarasin and Roux.

1889. An illustrated manual | of | British birds. | By | Howard Saunders, F.L.S., F.Z.S., &c. | Editor of [*etc.*, 2 lines.]. | With illustrations of nearly every species. | [*Monogram.*] | London: | Gurney and Jackson, 1, Paternoster Row. | (Successors to Mr. Van Voorst.) | 1889.

1 vol. post 8vo, 2 pr. 11. (half-tit. and tit.), 1 insert-slip (errata), pp. IV-VI+1, IX-XL, 1-754, 3 maps (col., fold.), 373 text-figs. London.

A handbook of non-technical information relative to British birds, considered by some reviewers to be the best work of its kind ever published on British birds. It forms, in effect, a condensed "Yarrell," of the fourth edition of which (1871-85, q.v.) Saunders was part editor. Each of 367 species is briefly described and its distribution, breeding habits and claims for recognition as British are discussed in accounts restricted to two pages. Most of the species are figured by woodcuts taken largely from the drawings by E. Neale in Yarrell's "History of British Birds," 1837-43 (q.v.), with the addition of some new ones by G. E. Lodge and J. G. Keulemans. The preface contains the diagnostic characters of the various genera arranged in the order of classification adopted in the general text. An appendix supplies additional notes on certain species from information secured, apparently, after the work was in press. The present copy is from the library, and contains the bookplate of, J. Lewis Bonhote, whose manuscript notes are pencilled through the volume. There is added, also, a fragment of a letter, apparently from Mrs. Leverton of Truro, regarding a certain specimen mentioned in the text (Bartram's Sandpiper). A second edition (q.v.) was published in 1899.

1899. An illustrated manual | of | British birds. | By | Howard Saunders, F.L.S., F.Z.S., &c. | Editor of [*etc.*, 2 lines.]. | With 384 illustrations and 3 coloured maps. | Second edition, revised and enlarged. | [*Monogram.*] | London: | Gurney and Jackson, 1, Paternoster Row. | (Successors to Mr. Van Voorst.) | 1899.

1 vol. post 8vo, pp. I-XL, 1-776, 3 maps (col., fold.), 390 text-figs. London.

Of the same general plan as the first edition, 1889 (q.v.), the present work has been largely rewritten to bring the subject matter to date, although still, with a single exception, keeping to the limits of two pages for each species. Numerous species are added, bringing the total to 384, with a consequent increase in the number of woodcuts.

A descriptive catalogue of the birds of the Department of Tuscany, Italy. Full descriptions of the species, genera and higher groups are given, with some synonymy, vernacular nomenclature in local and foreign terms, dates of occurrence, notes on life-history, etc. Several species are described as new, but the author's "nobis" usually denotes simply a change in generic position of the species. Volume III contains (pp. 237-296) seven indices, to the Latin, Italian, French, English and German names, general subject matter, and errata, respectively; pp. 183-236 contain the appendices to Vols. I and II. The separately paged synoptic tables form a part of Vol. III, according to the signatures, although Engelmann, who lists 4 vols. of the work, may have considered them as forming a separate volume.

A work on the birds of Italy similar to, and based on, the author's "Ornitologia Toscana," 1827-31 (q.v.). Many species are treated here that are not discussed in the earlier work, but numbers of the descriptions are copied and the text-figures are the same (with the omission of one). An index is given to each volume and Vol. II contains a general index to the three volumes. The appendices, vernacular indices (except the Italian which is embodied in the general index) and synoptic tables are omitted. A short preface is given by Adolfo Savi, the son of the author, since the work was published after the death of the elder Savi.

1 vol. 4to (size of demy folio) and double-elephant folio (plates; unbound). Text, pp. 1-54. Atlas, pll. 1-14 (by Barraband). Paris.

A separately paged reprint¹ of the ornithological portion of Vol. I of the *Natural History of the "Description de l'Égypte, ou recueil des observations et des recherches qui ont été faites en Égypte pendant l'expédition de l'armée Française [1798-1801],"* etc., published in 9 vols. (text) and 10 vols. (Atlas) from 1809-30. The present portion appeared originally in the first livraison (on pp. 63-114) in 1809, according to a footnote on p. 3 of Savigny's "Observations sur le Système des Oiseaux de l'Égypte et de la Syrie," 1811 (q.v.). The "Observations" and the present work are bound in one volume in the copy at hand. The present title embraces the systematic arrangement of some Egyptian and Syrian birds (27 species of birds of prey), with diagnoses of species and groups, and extensive synonymy. The plates are much more comprehensive than the text and of most of them no mention is made by Savigny, although they were destined for inclusion in portions of the work which he was unable to complete through failure of his eyesight. The description of the species figured on the plates was afterwards undertaken by Audoin, who, in 1826, published his "Explication Sommaire des Planches d'Oiseaux de l'Égypte et de la Syrie" (q.v.) in Part 4 of Vol. I of the *Hist. Nat. of the "Description de l'Égypte."*

¹I am unable to ascertain whether the reprint is a distinct issue or merely an author's separate with distinct pagination and title-page such as is common in many early French publication.

A lengthy dissertation in justification of the author's views expressed in his "Système des Oiseaux de l'Égypte et de la Syrie," 1810 (q.v.). Although marked as a supplement to the "Description de l'Égypte," this contribution does not appear to form an integral part of that extensive work and is not included in the collation of it given by the British Museum (Natural History) nor in Sherborn's analysis of the dates of publication of the natural history portions of the work (in Proc. Zool. Soc. Lond., 1897, p. 285). It is not mentioned in "A Bibliographic Account and Collation of La Description de l'Égypte" (printed for, but marked as not published by, the London Institution in 1838) nor can I find it in a copy of the complete work in the John Crerar Library, Chicago. The preface is dated December 5, 1810 but the imprint at the bottom of p. 16 is 1811. With the present copy is bound the reprint of the "Système des Oiseaux," collated elsewhere. If the latter is also distinct from the complete "Description de l'Égypte" it may have been issued with the present paper as part of the "Supplément," but I am inclined to think otherwise.

A series of popular descriptions of the nests and eggs of the birds of Switzerland, Germany and adjoining countries, accompanied by colored plates. The work

appeared in 13 sections, each of which was planned to contain three plates of nests and three of eggs; it is not certain that this plan was followed throughout. The plates in the first part of the work (pp. 1-128 and pll. 1-33) illustrate nests, eggs and birds; those of the second part (pp. 1-119 and pll. 1-40+36a show only the eggs.

A general review of the birds of the world with popular descriptions and accounts of the habits of representative species of the various groups. Some synonymy is given and one species (*Pipra iris*) is described as new. The earlier plates are passably good but the less said of the later ones, the better. The work was published in 21 Lieferungen of 6 pll. each with accompanying text. The first three Lieferungen appeared in 1846, (noted by Engelmann), the eighth in 1851 (probably late April or May; see below) and the last in 1853 (noted by Carus and Engelmann), although the title-page bears the date 1854. Lieferungen 1-7 were published by Meyer & Zeller, the remainder by Hanke. The introduction and signatures 1-19 of the general text are in folio, the remainder in 4to, and there is a change in typography from sign. 18 to sign. 19 (from pp. 72 to

73). Bound with the volume are 7 wrappers, but these are all dated 1851, and differ only in the numbers of the included Hefte, which are written by hand. These wrappers contain a prospectus of the work, dated April 1851, in which seven Lieferungen (containing 42 plates) are said to have been published to date while Lieferung 8 is promised for the close of the month.

The first volume of an elaborate work on the birds of Denmark, now in course of publication. An extended bibliography is followed by a chapter on avian anatomy and a general discussion of the Danish Avifauna. Herluf Winge contributes (pp. 244-255) a paper on avian remains in the kitchen-middens. The remainder of the volume comprises the detailed discussion of the Anseriformes. The work is profusely illustrated with excellent plates figuring most of the species in series which show variations, etc.

Parts I and II relate to mammals; III, to birds, being devoted to the genus *Falco*. The following are the subtitles of the third part. "Beschreibung einiger neuen grossen Edelfalken, aus Europa und dem nördlichen Afrika," pp. 1-11; "Fortsetzung der Abhandlung über die grossen, langschwanzigen Edelfalken," pp. 12-20. Several new species or subspecies of falcons are described herein, and new names are used for various other forms. According to Engelmann, and Carus and Engelmann, Pt. I appeared in 1841; II and pp. 1-10, pll. X-XI of Pt. III, in 1843; pp. 11-20, pll. XII-XV of Pt. III, in 1851. Hartert (Die Vögel der Paläarktischen Fauna, 1903-22, q.v.) cites all pages of Pt. III as of date "1844," and Swann ("Synopsis of the Accipitres," 1921-22, q.v.) gives "1844,"

but the last half of the part could not have been issued before September 1849 since on p. 15 there is a reference to a specimen taken during that month and year. The third edition of the A.O.U. Check-List of North American Birds, under *Falco mexicanus*, cites the date as 1850, but Sherborn (Index Animalium, Sect. 2, Pt. 1, p. CXIII, 1922) gives dates for the whole work as "1841, 1843, 1851," thus agreeing, apparently with Carus and Engelmann.

A general treatise on the art of falconry. Most of the plates contain life-sized portraits of the species of hawks used in falconry; two are of apparatus and two of hawking scenes. The work appears to have been issued in parts and bears the date 1844-53, which is that given by most bibliographers; Engelmann, however, quotes Livraison I as of date 1846.

A reprint of pp. 1-100 and the corresponding plates of J. C. and E. E. Susemihl's "Abbildungen der Vögel Europas," 1839-51, the text of which, so far as it was published, was written by Schlegel. The work consists of descriptions of the diurnal birds of prey of Europe, with an account of the distribution treated in detail. The illustrations are engravings, carefully colored by hand.

2 vols. in 3, crown 8vo. (Vol. I), pp. I-VIII, 1-699+1. (Vol. II), 2 pr. 11. (half-tit. and tit.), 362 pll. (col.; 178 in one vol., 184 in other). Leyden. 1859 (1854-58).

A general work on the birds of Holland, with short descriptions, synonymy and an account of the distribution of each of the species. A systematic list of species follows (pp. 617-642) with references to pages of text and to plates. An index (pp. 643-694), a short bibliography (pp. 695-699) and a list of errata complete the volume. The plates have been bound in two volumes with the half-title inserted in one and the title in the other. The figures are well-drawn and pleasing. The work was originally issued in 45 parts from 1854 to 1858 under the title of "Fauna van Nederlands—Vogels," by H. S. Schlegel and J. H. Herklots, being intended as part of a comprehensive work on the fauna of the country. The plan was discontinued before more than the birds were treated, and the original publisher, Trap, sold the entire edition to van Goor who issued it (according to Carus and Engelmann) in 1859 with a new title-page (as above) and with a preface by Schlegel dated December 24, 1858. The original Pts. 1-7 are acknowledged in the Journ. für Orn. for July 1855; 8-46, l.c. for March 1860; entire work reviewed, l.c. for Sept. 1862. This work is not to be confused with the author's ornithological volume, also dated 1860, of the "Natuurlijke Historie van Nederland," (q.v.).

An account of the Touracos (fam. Musophagidae). The general text, in Dutch, contains a description of each species with distribution, synonymy and other notes. The synopsis contains Latin diagnoses of the species. The plates are excellent and suggest the work of Wolf. I am uncertain as to the exact distribution of authorship between Schlegel and Westermann.

A rather general account of the birds of Holland; illustrated by a series of excellent plates depicting heads, feet, etc., and a second series (of inferior quality) illustrating various habitats and their occupants. The volume forms part of a more comprehensive series on the natural history of Holland. The date of publication is not unquestioned. Carus and Engelmann list only 2 parts (pp. "VI, XXXII, 128"), while Cabanis (Journal für Orn., April 1860) acknowledges the receipt of 1 part; Taschenberg does not record the remainder of the volume, but, instead, catalogues a second edition of the whole natural history under dates of 1867-69, published by G. L. Funke, Amsterdam. The John Crerar Library, Chicago, has a copy of the volume on birds, published by Funke in 1868, which is evidently of this second edition. Pagination and plates are as in the first edition. I can find no record of the concluding portions of the first edition of the birds, but Snouckaert van Schauburg (Avifauna Neerlandica, 1908, q.v.) cites all portions of the volume as of 1860, which is probably correct. The Cat. Libr. Brit. Mus. (Nat. Hist.) cites a "Tweede Druck" (which must be a third edition, instead) published in Haarlem in 1878. There is also "De Vogels van Nederland" (q.v.) dated, likewise, 1860, but probably published the year before.

Three parts comprising all published of a work on the birds of the Dutch East Indies. The descriptive text, including descriptions of several new species, is in both Dutch and French. The plates (some of which, at least, are by J. Smit) have the figures in miniature but are of high quality. Taschenburg quotes "Haarlem, A. C. Kruseman" as well as "Amst., G. L. Funke," as publisher's imprint. The title-page is a subsequent insert. In the present copy, the Alcedinidae or Ijsvogels are bound following the Accipitres. The dates are from reviews in the Zoological Record for 1865 and 1866.

The ornithological portion of Schrenck's work which was published from 1858-95
(-1900?). The present portion contains a detailed account of the birds ob-
served by the author and by Maack and Maximowicz, including 190 species.
A supplement (pp. 519-565) lists and discusses other species discovered by
various observers or suggested as of probable occurrence in the Amur region

of south-eastern Siberia, which forms the geographical basis of the entire work. One new species and one new subspecies are described, but the former is ante-dated and the name of the latter preoccupied. The reverse of the subtitle-page bears the date of printing as June 1860. The work is reviewed in the *Ibis* for 1861, pp. 202-8.

1853. A | synopsis of the Galbulidæ | by | Philip Lutley Sclater, M.A., F.Z.S.

1 vol. 8vo, pp. 1-10, (orig. wrapper). Edinburgh.

A revised edition of several papers on Galbulidae published by Sclater in Jardine's "Contributions to Ornithology" for 1852. As noted by Coues, the wrapper of this paper supplies some important data with reference to the publication of the "Contributions." The wrapper also bears the date of publication of the present title and (in the present copy) the inscription, "M. Jules Verreaux fr. the Contributor."

1 vol. 8vo, pp. I-XVII+1, 1-104, (4 original wrappers), 45 pll. (col.; by Oudart), 1 map (col.). London.

A discussion of all the known species of the tanagers belonging to the genus *Calliste* as then understood. Synonymy, Latin diagnoses and an account of variations, relationships, habits, etc., are given for each species, all but four of which are figured on excellent plates. The work was published in four parts, of the extent and dates of which I am uncertain. The copy at hand contains four original wrappers, but they are all alike, undated and with the part-number inserted by hand. A prospectus of the work announces the publication at short intervals of four parts, each to contain about twelve plates and the corresponding letterpress. The preface is dated December 1, 1857 although Carus and Engelmann give 1858. There is a break suggested between pp. 64 and 84 where signature 'F' contains 10 ll. instead of the ordinary 8 ll. Sclater himself, in the *Ibis*, 1876, p. 407, says he published the work in 1858, but this may refer only to the last part; in the *Ibis*, 1863, p. 450 he says the work was completed in December 1857, but this may refer only to the manuscript. Additions to the monograph were published by Sclater in the *Ibis* for 1863, pp. 450-452.

1 vol. post 8vo, pp. I-XIV, 1 l. (list of illustrs. and errata), pp. 1-338, pll. I-XX (col.; by J. Jennens). London.

A catalogue of the author's collection of some 4100 specimens of American birds, representing 2169 species and containing 386 type-specimens. Each specimen is listed and the principal synonyms of each species are given. A number of new species are described. There is a little doubt as to the date or dates of publication. There are 24 signatures, each of which, except the introductory one, bears its date of printing, beginning with May 1, 1861 and closing with May 16, 1862, while the title-page is dated, simply, 1862. Cabanis, in the *Journal für Ornithologie* acknowledges the receipt of various installments as follows. Signs. I and II in *Journ. für Orn.* for May, 1861; III-VIII, Sept. 1861; IX-X and XI-XII, Jan. 1862; XIII-XVI, March 1862; and XVII-XXIII with introductory matter, Sept. 1862. Coues says, "Some copies of the sheets were distributed as printed." The author, as reviewer for the *Ibis*, in the *Ibis* for 1862, p. 379, calls the work a "lately completed 'Catalogue'" and does not give a date. Trübner and Co., on the wrapper of the *Ibis* for July and October, 1862, advise that "Only 100 copies of the perfect work have been prepared." The evidence seems to point to the issue of signs. I-XII (pp. 1-192) at various dates in 1861, approaching the dates of printing, and of the remainder of the volume at various periods in 1862. Copies without plates are also in existence.

Descriptions, figures and critical notes, with synonymies, distribution and some biographical account, of 104 species of Neotropical birds. At the end of many of the articles there is given a summary of the congeneric species in America. The hand-colored plates are excellent. The work was planned originally, as may be suggested by the title, to include new and interesting birds from the whole of the world, but was later restricted to America south of the United States. The book was issued in thirteen parts, the dates of which are given by Coues (2nd Inst., p. 286). These dates do not agree, always, with those printed at the close of each article. As given by Coues, they are as follows (with the addition of pagination). Part I, pp. 1-16, pll. I-VIII, Oct. 1, 1866; II, pp. 17-32, pll. IX-XVI, Feb. 1, 1867; III, pp. 33-48, pll. An account of 434 species of birds from Argentina, with concise descriptions and brief synonymy of each from the pen of Sclater, and with detailed notes on habits by Hudson. Hudson's portion of the work was reprinted in 1920 under the title of "Birds of La Plata by W. H. Hudson" (q.v.). The hand-colored plates in the present work are very fine. A handbook of Colorado ornithology, containing descriptions, references to Colorado records, distribution of species and notes on habits. Much of the work is compiled (of necessity owing to the brevity of the author's residence in Colorado before undertaking the work) but consequent errors are not numerous. The contour map (after Rydberg ?) is said by Henderson (*Auk*, XXIX, p. 429, 1912) to be inaccurate. A bibliography and gazetter are given at the close of the work.

A carefully prepared check list of all known species and subspecies of Ethiopian birds, with their accepted scientific and vernacular names, references to original description, type localities and distribution for each. The wrapper notes this as Part I of the work and advises of the future publication of the remaining portions. The current review in the *Auk* disclaims any participation by the American Ornithologists' Union in the preparation of the volume to date.

A series of miscellaneous papers on natural history, as indicated in the lists of
contents on the various title-pages. Annus I and Annus V contain all the
ornithology. The first is entirely ornithological and is devoted to descriptions
of the birds in the author's collection, in the emperor's aviary at Vienna, and
in the "Museum Turrianum." Numerous new species and genera are des-
cribed. The last volume contains, among other matter, a sort of supplement
to the first volume, with discussions of some species not included in the original
list. *Falco pannonicus* is new, being, apparently, the earliest name for the
bird recently known as *Falco cherrug*.

A verbatim reprint of the ornithological portions of Scopoli's work, reduced in
size from the original folio and published by The Willughby Society (q.v.). The
original work was published in three volumes,—the first two in 1786 and the
last in 1788. The ornithological matter is as follows.

Observationes zoologicae. De Alaudis nostratibus. Pt. I, 1786, pp. 69-71.
Falco rufus. Pt. II, 1786, pp. 36 and 37.

Specimen zoologicum exhibens Characteres genericos, & specificos, necnon Nomina trivialia novorum Animalium. Quae Clarissimus Sonnerat in China, & in Indiis orientalibus nuper detexit. Pt. II, 1786, pp. 84-96.

Fringilla alpina. Pt. III, 1788, p. 37.

The first, second and third papers are not of especial importance, but the third contains a discussion of the mammals and birds treated in Sonnerat's "Voyage a la Nouvelle Guinée," 1776 (q.v.), and "Voyage aux Indes Orientales et a la Chine," 1782 (q.v.), with short diagnoses and the first application of binomial names to the species. The preface of the reprint, by the editor, contains an account of the life of the author and some review of the book.

An account of the habits and distinguishing characteristics of the land birds of North America "east of the Mississippi River, Lake Winnipeg, and the western borders of Hudson's Bay, together with Greenland and the islands which naturally group themselves with the mainland of the region." Six typical habitats are selected and the birds which occur in each are discussed in sequence. A systematic table of species is given at the close of the volume. The illustrations are from photographs of live birds, mounted specimens, dried skins and freshly-killed examples, with some birds' nests and occasional landscapes.

The narrative of the author's journey in company with J. A. Harvie-Brown through parts of Russia in search of the breeding grounds of the Gray Plover, Little Stint, Sanderling, Curlew Sandpiper, Knot and Bewick's Swan. Observations on the bird life of Russia constitute the larger part of the text and are connected by the running account of the journey. The colored plates are taken from the "Ibis" for 1876, pl. V and VII. A companion volume is found in the author's later "Siberia in Asia," 1882 (q.v.). The present copy of the work was presented to Edward Hargitt by the author.

The account of an overland journey through Siberia in 1877 on ornithological and ethnological research. Notes on the bird life of the region are thoroughly interspersed with the narrative and a resumé of the ornithological results of the expedition is given in Chapter XXV, pp. 288-298. The book forms a companion volume to the author's earlier "Siberia in Europe," 1880 (q.v.).

The two volumes were combined, revised and reissued in 1901 as "The Birds of Siberia."

A debatable work on the life-histories, habits, breeding, distribution, variation and classification of British birds. A considerable amount of first-hand information is given from field observations, and the work is valuable for these, but there are many statements which have been questioned by critics. The classification adopted by the author follows a principle of "auctorum plurimorum" in which priority is disregarded and that name used which has a majority of previous authors behind it. There are numerous caustic remarks, in criticism of antecedent and contemporary authors, which might have been made in more pleasant style. Detailed introductions are given in the three volumes of text; that one in the second volume, "On the Protective Colour of Eggs," was written by Charles Dixon. The work appeared in six parts, two to each of the first three volumes. Part I is usually cited as of 1883, but it is reviewed under date of 1882 in the *Ibis* for January 1883 (p. 114). Part II appeared in 1883; III (to p. 288, Vol. II) in 1883; IV in July 1884; V and VI in 1885, including the list of plates bound (with all the plates) in a separate volume. The plates, although the title-page to their volume is dated 1885, appeared with the various parts from 1882-1885. A second edition of the entire work appeared in 1896 with plates printed in Paris, and these plates, with occasional notes added, were reissued in 1904.

1 vol. royal 4to, pp. I-XXIX+1, 1-524, 21 pll. (col.; by Keulemans; nos. I-XXI in index), 247 text-figs, 1 text-map, 17 decorations+fig. on title-p. London and Manchester.

A monograph (in spite of the author's disclaimer on p. 5.) of the shore birds of the world, usually considered as representing several distinct families but united by the author into a single family. The prefatory matter (Chapters I to VIII, pp. 1-65) is devoted to general remarks on classification, evolution, differentiation of species, glacial epochs, migration, "The Paradise of the Charadriidae," zoological regions and subspecific forms. The main body of the text discusses the various species of shore birds in order, with considerable detail. The work met

with a varied reception owing to the debatable character of many of the author's views on classification, but it is, nevertheless, a valuable repository of information on the subject. There is no date on the title-page but the back of the cover bears the date 1888. Sharpe, in Seebohm's "Coloured Figures of the Eggs of British Birds," 1896 (q.v.), p. X, gives the date of publication as 1887 on the basis of a copy of the work in his possession bearing the inscription "Christmas, 1887." The work is based on the collections of J. E. Harting, Shelley, and Swinhoe, together with Harting's manuscript notes (which were gathered with the intention of publishing a monograph of the shore birds) to which Seebohm acknowledges free access. The hand-colored plates are excellent.

1 vol. royal 8vo, pp. I-XXIV, 1-386, frontisp. (map), 98 text-figs. London.

An attempt to collect the available information respecting Japanese ornithology into a single volume. The work shows extreme carelessness in preparation and much of the information it presents is still half-concealed, owing to the manner of presentation. Synonyms are rarely quoted and then only in the general text; the descriptions of the various species are too brief to be of much service; new names are used without designation as such and sometimes without diagnostic characters; distribution is often erroneously given; species of earlier authors are occasionally dismissed summarily, without adequate reason. In the text the author takes occasion to treat of the general classification of birds, whether Japanese or not, and defines all subclasses, orders and suborders of the class *Aves*. This discussion presents some modifications of the author's views on the same subject which he expressed in his work of a few months' earlier date, the "Classification of Birds," 1890 (q.v.). An annotated bibliography is given in the early part of the volume. A critical review of the work was given by Stejneger in the *Auk* for January, 1891, pp. 99-101.

1890. Classification | of | birds; | an attempt to diagnose the subclasses, orders, suborders, | and some of the families of existing birds. | By | Henry Seebohm. | London: | R. H. Porter, 18 Princes Street, Cavendish Square, W. | 1890.

1 vol. royal 8vo, pp. I-XI+1, 1-53. London.

A treatise on the taxonomy of the higher groups of birds. Fourteen orders and thirty-six suborders are diagnosed and the definitive characters analyzed for all of the suborders, in a tabular form that is easily read. Two arrangements of the orders into subclasses are given,—one with six subclasses, the other with five; the former is used in the body of the work. The author later modified his views in his "The Birds of the Japanese Empire," 1890 (q.v.), and in a "Supplement," 1895, to the present work. However the proposed scheme of classification may be criticised, considerable information is presented in the work.

Short accounts of the breeding habits and the occurrence in the British Islands of the birds of the country. The text is modeled after, and is in some cases a condensed reproduction of, that of the author's larger, "History of British Birds," 1882-85 (q.v.). The plates, in chromo-lithograph, represent typical examples of the eggs of the various species and are very good. A memoir of Seebohm, by Sharpe who edited the whole work, is included, fittingly, in the volume.

A thorough monograph of a limited section of the family *Turdidae*, comprising the genera *Geocichla*, *Turdus*, *Merula* and *Mimocichla* as recognized by the authors (a group usually further divided by most authors). Synonymy and a brief Latin diagnosis of each species are followed by detailed notes. Several new species are described. The hand-colored plates by Keulemans are excellent. Seebohm had most of the plates prepared but, at his death, left his manuscript unfinished. Sharpe undertook to edit and complete the work, but found that the manuscript in hand covered only the genus *Geocichla*, leaving the much greater portion still to be written; this was done entirely by Sharpe. Seebohm's text occupies pp. 1-91, excluding certain species of *Geocichla* in those pages which were written by Sharpe. The remainder of the work is Sharpe's, whose initials appear at the foot of each article contributed by him. The work was issued in 13 parts, as follows. Part I, pp. 1-40, pll.

A series of life-sized, colored plates of British birds. There are numerous editions of the work. According to Engelmann, Coues, Mullens and Swann and the Catalogue of the Library of the British Museum (Natural History), Vol. I, containing the land birds, was issued in 8 parts; Lizars, in the Advertising pages of the early volumes of Jardine's "Naturalist's Library," 1833-43 (q.v.) gives the number of parts as 7, one appearing every six months and each containing 12 pll. Part II, containing the water birds, was issued in similar manner in 11 parts with (according to Lizars) 135 plates. Engelmann cites 228 plates in both volumes. The original edition began in 1821 and was completed in 1834. Volume II, as collated above, belongs to this original set, and has the

paper watermarked "1826." Volume I, as collated above, has the paper watermarked "1839" and seems to belong to a later edition which I am unable to trace. The engraved titles of both volumes are uncolored. Mullens and Swann note the issue, with the original plates, of a temporary, explanatory letterpress which is very rare. The full text appeared in 1825-33 under the title of, "Illustrations of British Ornithology" (q.v., 1833). The original cover-title for the plates was also (according to Lizars) "Illustrations of British Ornithology," later altered to that quoted above. In the preface to Vol. I of the text, the author apologizes for a "slight want of regularity in the numbering of the plates."!

A manual of British ornithology, containing accounts of the habits of the various species of birds, with their synonymy, and with descriptions of the genera and higher groups. Reference is made to the colored and other plates in the author's "Plates to Selby's Illustrations," etc., (1821)- 1834 (-1839 ?) (q.v.). Although issued partly in connection with the volume of plates, under the same title (at the time of issue), text and plates were purchasable separately and the publishers (in the advertising pages of Vol. I of Jardine's "Naturalist's Library," 1833-43 (q.v.)), express the hope, also voiced by the author in his preface to the present work, that the text will constitute an independent work of reference. Vol. I was issued originally in 1825, with nomenclature according to Temminck. Vol. II was prepared according to the arrangement proposed by Vigors and to make the two volumes uniform, Selby revised Vol. I and reissued it in altered form with the first and only edition of Vol. II. The set, as collated above, consists of the second edition of Vol. I and the only edition of Vol. II.

1840. A | catalogue | of the | generic and sub-generic types | of the class | Aves, birds, | arranged according to the natural system; | with | separate lists, | distinguishing the | various quarters of the globe | in which | they are to be procured. | Newcastle: | printed by T. and J. Hodgson, Union-Street. | 1840.

1 vol. 8vo, 2 pr. 1l. (tit. and pref.), pp. 1-70. Newcastle.

A systematic list of the genera and subgenera of birds, indicating the type species of each and its distribution. Pp. 50-70 contain the names of these type species arranged in five lists, according to distribution, as procurable in "Britain and Europe," "America and its dependencies," "Africa," "Asia and its islands" and "Australia and isles of the Pacific." The catalogue contains the new generic names, *Haliastur*, *Mergellus* and *Polioccephalus*. Furthermore, the work is important because of the fixation of the types of a number of genera not mentioned by Gray in his first edition of "A list of the Genera of Birds," 1840 (q.v.). The actual date of publication of the present work is uncertain, but if it should prove to antedate Gray's volume, the modern definitions of a number of genera would have to be altered. Both works were independent

of each other and neither is cited by the other, although the second edition of Gray (1841, q.v.) quotes Selby in several instances. It is possible that the current Report of the Natural History Society of Northumberland, Durham and Newcastle-upon-Tyne for which organization the present volume was prepared) might throw some light on the date of publication, but this periodical is inaccessible to me. This work of Selby's is quite rare.

1 vol. cap 8vo, 3 pr. ll. (various tits.; 1 illum.), pp. 17-207 + 1, 189-219, frontisp. (portr.), pll. 1-30 (col.; by E. Lear). London. (Date?).

A reprint of Vol. VI, Ornithological Series (1st ed.), of Jardine's "The Naturalist's Library," 1833-43 (q.v.), with some changes. To the memoir of Bewick have been added additional notes on the same topic (pp. 51-72), and at the close of the volume (pp. 189-219) is a memoir of Daubenton, written by Cuvier. This memoir of Daubenton is paged continuously with the first edition of the present volume, but discontinuously with the edition in hand, and is inscribed "(To be placed at the end of the Parrot Volume.)" as though it had been issued primarily with some later volume of the first edition (where however I am unable to place it). The plates differ from those of the first edition in coloration and in the addition of the habitats to the inscriptions. In the copy at hand, the illuminated title-page bears the imprint of Lizars.

A reprint of Vol. V, Ornithological Series (1st ed.), of Jardine's "The Naturalist's Library," 1833-43 (q.v.), with pp. 229-252 (on the rearing of domestic pigeons) added. The plates contain both Latin and English names and localities, and are embellished by the addition of elaborate scenic backgrounds (uncol.), although the coloring is inferior to that of the plates of the first edition. The illuminated title-page, with Lizars's imprint, is inscribed, "Vol. VI."

A thorough monograph of the subject, containing all the available information respecting the birds in question and illustrated by fine hand-colored plates. The work appeared in 15 parts, the dates of publication of which are given by Coues as noted below. The contents of each part, secured from the Zoological Record, I have indicated by the number of each plate as given in the index (the plates, themselves, are unnumbered). Part I, pll. 23, 28, 44, 45, 62, 71, 96, 99, July 1, 1868; II, pll. 25, 38, 39, 41, 46, 97, 118, 119, Oct. 1, 1868; III, pll. 37, 40, 55, 56, 58, 104, 116, 117, Jan. 1, 1869; IV, pll. 17, 27, 47, 49, 50, 51, 68, 120, April 1, 1869; V, pll. 7, 9, 10, 24, 48, 53, 66, 69, July 1, 1869; VI, pll. 11, 12, 16, 18, 20, 21, 52, 100, Oct. 6, 1869; VII, pll. 3, 14, 22, 61, 65, 70, 72, 113, Jan. 1, 1870; VIII, pll. 21, 30, 31, 32, 35, 36, 114, 115, April 1, 1870; IX, pll. 2, 8, 29, 57, 60, 63, 76, 106, July 1, 1870; X and XI (double no.), pll. 4, 5, 13, 26, 43, 59, 75, 77, 78, 79, 80, 83, 88, 98, 108, 112, Oct. 1, 1870; XII, pll. 34, 64, 87, 89, 91, 94, 101, 107, Nov. 1, 1870; XIII, pll. 1, 6, 67, 81, 85, 92, 93, 95, Dec. 1, 1870; XIV and XV (double no.), pll. 15, 19, 33, 54, 73, 74, 82, 84, 86, 90, 102, 103, 105, 109, 110, 111, introductory pl. and map, Jan. 1, 1871. The plates not included in this list are of indeterminate position.

The introduction contains a review of the group and presents some emendations of the text, including the definition of a new genus, *Myioceyx*. The text contains the description of a new species, *Tanysiptera emiliae* in Pt. XIV. Several other species, described by the author in the Proceedings of the Zoological Society, are redescribed here with references to the Proceedings without pagination, and the dates of these numbers of the Proceedings and of the parts of the present work are very close, requiring further investigation to determine the priority of reference. The species in question are *Ceyx wallacii*, *Cultura sanghirensis*, *Pelargopsis gouldi*, *P. floresiana* and *P. burmanica*.

A detailed monograph of all the known species of swallows, with fine, hand-colored plates by the junior author. The introductory chapters contain a review of the genera, a discussion of the geographical distribution of the various members of the family, and a bibliography, with a short note on the mythical hibernation of the birds in question. An appendix to each genus, contains supplementary remarks on the various species, added after the publication of the original accounts in earlier numbers of the work. The letterpress for each species is paged separately and the plates are unnumbered, but the tables of contents for the two volumes give a running number to pages and plates, continuous through both volumes. The work was issued in 20 parts (including some double or treble numbers) as follows; the plate-numbers are as given in the tables of contents. Part I, pll. 49, 51, 54, 66, 73, 115, Sept. 1885; II, pll. 1, 4, 17, 53, 70, 74, Dec. 1885; III-IV, pll. 16, 19, 56, 57, 58, 59, or 60, 61, 62, 69, 112, 114, 121, July 1886; V-VI, pll. 12, 18, 21, 22, 48, 92, 100, 103, 107, 108, 109, 118, June 1887; VII-VIII, pll. 5, 60 or 59, 77, 98, 101, 105, 111, 116, 119, 120, 122, 126, map 123 or 124, May 1888; IX-X, pll. 3, 13, 23, 27, 28, 52, 64, 75, 89, 90, 91, 97, March 1889; XI-XII, pll. 14, 24, 26, 39, 55, 63, 72, 86, 93, 95, 99, 127, maps 35, 94, 128, 129, Dec. 1889; XIII-XIV, pll. 6, 10, 11, 20, 65, 67, 68, 76, 104, 106, 110, 125, Dec. 1890; XV, pll. 15, 25, 46, 47, 50, 96, Aug. 1892; XVI-XVII, pll. 2, 9, 29, 36, 37, 38, 40, 41, 42, 71, 87, 88, Dec. 1893; XVIII-XX, pl. 117, ? maps 7, 8, 30-34, 43, 44, 45, 78-85, 102, 113, 124 or 123 (these not all unquestioned), Oct. 1894. The text to the following species (without plates) is recorded as having been issued in the parts given. *Hirundo gardoni*, Pt. II; *Petrochelidon timoriensis* and *Cotile anderssoni*, Pt. V-VI; *Progne domestica*, Pt. IX-X; *Hirundo namiyei*, Pt. XV. Some of the letterpress accompanied the corresponding plates, but there are exceptions. *Cotile diluta* and *C. anderssoni* are described as new.

A number of popular sketches of European bird-life, treated under the headings of 39 species to which, however, the accounts are not strictly limited. The author acknowledges indebtedness to the writings of Henry Seebohm which are quoted largely, along with those of a few other authors. The colored lithographs are mostly inferior to the line drawings. The edition was limited to 300 copies.

1 vol. imperial 4to and royal 4to, pp. I-XVIII+1, 1-153, pll. (royal 4to) I-XXIV (col.; by Keulemans, Hart and ?J. Smit). London.

A report by Sharpe on the birds collected by Dr. Stoliczka on the Second Yarkand Mission into central Asia, with extracts from Stoliczka's notebook and from that of his companion, Colonel Biddulph, as well as from the published notes of Dr. Henderson (of the First Yarkand Mission) and Dr. Scully. The work thus includes the results of both expeditions to Yarkand. Allan Hume prepared an earlier report on the same material but his manuscript was stolen and destroyed. An appendix to the present book (pp. 149-152) contains descriptions of six species of birds not found in Yarkand, thus serving as an excuse to present plates XVI-XXIV, as explained in the text. The present volume forms Part 5 of the complete report which was published in 14 parts during 1878-91. The present copy is from the library of Tschusi zu Schmidhoffen.

An excellent monograph of all the known species of these families of birds, illustrated by life-sized, hand-colored plates of many of them. These plates in some cases are printed from the stones used by Gould and Sharpe in the "Birds of New Guinea," 1875-88 (q.v.); some are redrawn and others are entirely new. In the appendix (Vol. I, pp. XXI-XL, the author gives a general review of the species, with the additions necessary to bring the earlier parts up to date. In the introduction, pp. V-XIX, are given tables for the determination of the various groups from families to species. The work appeared in 8 parts as collated below. The present set is still bound in the original board covers which contain a large vignette of *Ptilorhis victoriae*, the title (arranged slightly differently from the title-page), the part-number, a list of contents, the proposed number of parts (originally six but altered in Pt. VI to eight), and the imprint, date and price. The contents and date of each part are as follows. Part I, *Lycorax pyrrhopterus*, *Parotia lawesi*, *Cicinnurus regius*, *Craspedophora magnifica*, *Epimachus meyeri*, *Paradisea apoda*, *Prionodura newtonianu*, *Xanthomelus aureus*, *Chlamydodera orientalis* and *Tectornis dentiostri* 1891. Part II, *Ptilorhis paradisea*, *Craspedophora intercedens*, *Astrapia nigra*, *Paradigalla carunculata*, *Paradisornis rudolphi*, *Rhipidornis gulielmi tertii*, *Manucodia chalybeata*, *Lycorax obiensis*, *Amblyornis inornata* and *Aeluroedus stonii*, 1893 (reviewed in Ornithologische Monatsberichte for July, 1893). Part III, *Ptilorhis victoriae*, *Epimachus speciosus*, *Astrarchia stephaniae*, *Paradisea augustae-victoriae*, *Schlegelia respublica*, *Manucodia comrii*, *Phonygama purpureo-violacea*, *Aeluroedus viridis*, *Chlamydodera occipitalis* and *Amblyornis subalaris*, 1894 (rev. Part IV, *Drepanornis bruijnii*, *D. cervinicauda*, *Uranornis rubra*, *Diphyllodes chrysoptera*, *Lophorhina superba*, *Phonygama keraudreni*, *Cnemophilus macgregorii*, *Aeluroedus arfakianus*, *A. melanotis* and *A. buccoides*, 1895 (rev. Orn. Monatsb. for Nov. 1895). Part V, *Drepanornis alberti*, *Semiopoda wallacii*, *Trichoparadisea gulielmi*, *Diphyllodes humsteini*, *Lophorhina minor*, *Parotia sexpennis*, *Sericulus melinus*, *Aeluroedus maculosus*, *A. geislerorum* and *Lycorax morotensis*, 1895 (rev. Orn. Monatsb. as publ. at close of 1895; in no. for Jan. 1897). Part VI, *Craspedophora mantoui*, *Lamprothorax wilhelminae*, *Epimachus ellioti*, *Ianthothorax bensbachii*, *Diphyllodes magnifica*, *D. seleucides*, *Paradisea raggiana*, *Xanthomelus ardens*, *Loria mariae* and *Ptilonorhynchus violaceus*, 1896 (rev. Orn. Monatsb. for Nov. 1897 as having been published in 1896, but the part contains an insert-slip dated Dec. 30, 1896 and may have been issued in 1897). Part VII, *Craspedophora alberti*,

A compact manual of British ornithology containing synonymies and detailed accounts of the plumages, distribution, habits and nidification of the numerous species of the country. The work was much criticized at the time of its publication on account of the author's strict adherence to certain views on nomenclature which had not received universal approbation in England. The plates are of poor quality. Vol. I first appeared in "Allen's Naturalists' Library" in 1894; Vol. II, in 1895; Vol. III, 1896 in both editions, accompanied by reprints of Vols. I and II of the second (present) issue; and Vol. IV, 1897 in both editions. The pagination of both sets appears to be the same except for the introductory matter in Vol. II (= pp. I-XVIII+2 pp. in ed. I), but I am unaware of any changes in the general text.

A popular volume in which have been collected notes on the peculiarities and habits of a very large number of the birds of the world, which are especially interesting for one reason or another. The book is composed of matter used by the author in many of his lectures. It is well arranged according to subjects, and, although possibly not designed for purely juvenile consumption, is excel-

lently well adapted for juvenile instruction as well as for the information of older readers. The original edition was published in London in 1898; the present one, printed in Great Britain but published in New York was probably contemporaneous, although I can find no record of the date.

5 vols. post 8vo. Vol. I, pp. I-XXI+1, 1-303, 1 l. (errata; between pp. 204 and 205; issued with Vol. II). Vol. II, pp. I-XV+1, 1-312. Vol. III, pp. I-XII, 1-367. Vol. IV, pp. I-XII, 1-391, 1-24 (advt.). Vol. V, pp. I-XX, 1-694, 1-28 (advt.). London.

Prepared on much the same plan as George Robert Gray's "Hand-list of Genera and Species of Birds," 1869-71 (q.v.), with the subject matter brought up to date and with page-references to the volumes of the British Museum "Catalogue of the Birds," 1874-98 (q.v.). The forms treated are summarized approximately as comprising 2810 genera and 18,939 species. The volumes are composed as follows. Vol. I, Saururae, Palaeognathae and Neognathae,—Galliformes to Strigiformes; II, Psittaciformes to Piciformes; III, Eurylaemiformes to Passeriformes, Acromyodi, Pycnonotidae; Vol. IV, Timeliidae to Certhiidae; Vol. V, Zosteropidae to Streperidae. Vol. II contains an index to Vols. I and II; the remaining volumes each contain an index of their own contents. A "General Index" (q.v.) was prepared by Ogilvie-Grant and published in 1912.

The dates of the present volumes are not all recorded. Vol. I was issued in November, 1899 (rev. in *Ibis*, Jan., 1900); the preface to Vol. II is dated June 11, 1900; that of Vol. III, July 10, 1901; Vol. VI appeared in September, 1903 (rev. *Ibis*, Jan. 1904); the preface to Vol. V is dated Aug. 24, 1909.

The discussion of the Palamedeiformes was omitted, inadvertently, from Vol. I, but was supplied with Vol. II on an insert-slip intended to be attached to its proper place in the preceding number, at p. 205.

A series of descriptions accompanying colored plates of various subjects of natural history. Ornithological matter is illustrated on pll. I-VI, VIII, XII, XIV-XVIII, XXI-XXIV, XXVIII-XXX, XXXIII-XXXVI, XXXVIII, XL-XLII and XLVII-LIX (41 pll.). The present copy is lettered on the back, "Miller's *Cimelia Physica*," and the Cat. Libr. Brit. Mus. (Nat. Hist.) lists the work as a later edition of Miller's "Various subjects of Natural History wherein are delineated Birds, Animals and many Curious Plants, &c.", 1776-92. The text, however, is the work of Shaw.

Most of the ornithological volumes of a detailed work on zoology, begun by Shaw in 1800 and completed by Stephens after Shaw's death following the publication of Vol. VIII in 1812. The work contains descriptions, synonyms and notes on habits of the various species, illustrated by excellent engravings. There is some discrepancy in the dates as given on the printed and engraved title-pages. Vol. VIII, Pts. I and II, is thus dated 1811 and 1812; an editorial advertisement in Vol. IX, Pt. I, says that Vol. VIII was published in 1812 (agreeing with the engraved title-page). Vol. XIII is similarly dated both 1825 and 1826; I do not know which is correct. Vol. VII, also relating to birds, is absent from the present set.

The index is complete for all branches of the natural history, not only of the birds. The references are not segregated. The volume containing this index is separately titled, as transcribed above, but appears to form the second part of the last volume on birds since its signatures are lettered "V. XIV. P. II."

1 vol. royal 8vo, pp. I-VIII, 1 l. (list of pll.), pp. 1-342, pll. I-XIV (col.; by Keulemans). London.

A review of the birds previously recorded from Egypt or collected there by the author, with short descriptions and some account of habits and distribution. Part I (pp. 1-64) consists of an account of the author's journey in the country, with occasional notes on the local bird-life. The hand-colored plates are very good.

1 vol. royal 4to, pp. I-CVIII, 197 ll. (pp. 1-393 in table of conts.), 121 pll. (numbered only in table of conts.; col.; by Keulemans). London.

An excellent monograph of an interesting family of birds, with descriptions in Latin and English, critical notes, and discussions of habits, etc., from accounts by many different observers. A total of 138 species of the group are recognized, of which all but one are figured on excellent, hand-colored plates. Two new genera (one from Sharpe, *in litt.*) and ten new species are described, and one previously described form is given a name, which, in a later part of the work (p. CV), is sunk in synonymy. A detailed review of the classification of the group, with additions to the text, is given on pp. XV-LII. Tables of geographical distribution follow, on pp. LIII-LVIII, and a very complete bibliography is presented, on pp. LIX-CVIII. There is no pagination or numbering of plates except in the lists of contents and of plates (pp. V-VIII). The work appeared in 12 parts from July 28, 1876 to February 1880. Text and plates of the various species were not always issued synchronously; the author gives a complete collation of the various parts, with dates of publication, on pp. XIII-XIV. The original title of the work was, "A Monograph of the Cinnyridae," etc., later changed to the wording transcribed above which represents the final title.

A review of the birds of Africa and surrounding islands, excepting "those countries bordering on the Mediterranean and eastward of the Red Sea." Volume I comprises a check-list of species. The remainder of the work takes up the various groups systematically, giving descriptions and biographical notes but citing, as synonymy, only references to the Catalogue of Birds in the British Museum and publications not mentioned therein, with further citation of the best published illustration; the original description is omitted unless it falls into the category mentioned and even the authorities for the nomenclature are not necessarily included. Many new genera and species are described. The illustrations are most excellent. The work was published in 8 parts, divided as collated above except that Vol. II appeared in two parts,—the first including pp. 1-160 and the second, the remainder. Vol. I is reviewed in the *Ibis* for July 1896; **II Pt. I**, in July 1900; **II Pt. II**, in Jan. 1901 (but publ. in 1900); **III** in Oct. 1902; **IV Pt. I**, in the *Auk* for April 1905; **IV Pt. II**, in July 1905; **V Pt. I**, in the *Ibis* for July 1906; and **V Pt. II**, in Jan. 1913 (but publ., probably, in 1912). The various signatures bear varying dates which are evidently those of printing, not of publication. All of the work except Vol. V Pt. II is from the pen of Shelley who died before the work was complete. The final part was pre-

pared by W. L. Sclater from Shelley's manuscript notes and proofs, with some additions of his own. There is an index to each volume except the first, but no general index.

An annotated list of New Jersey birds, arranged alphabetically under their English names. Latin nomenclature is purposely omitted. The text consists of simple descriptions, with notes on habits, song, distribution and food, frankly compiled and accredited to Alexander Wilson, Witmer Stone, Frank M. Chapman, D. G. Elliot and others. Stone is thanked for a revision of the work before it went to press. Palmer's "Bird Day in the Schools" (= Circ. 17 U. S. Dept. Agriculture, Biol. Survey) and a chapter on the migration of birds, from "Stone's "The Birds of Eastern Pennsylvania and New Jersey," 1894 (q.v.), are reprinted at the front of the volume. The illustrations are from photographs of mounted birds.

A and B (= 120 pll.; col.; by Wolf, ?and others). Leyden.

Descriptions of Japanese birds, new and otherwise, based on collections of Siebold and other visitors to Japan whose specimens were deposited in the London Museum. Some of the new species were based on Japanese drawings, without specimens at hand. No authorities are given for most of the names used, nor is there any indication of which of the names are new. The ornithological text is entirely by Temminck and Schlegel who, alone, are to be quoted in this respect. Plates I-XX are by Wolf; the remainder are unsigned. The work, as collated, consists of the volume on birds only; the entire set is more comprehensive. The ornithological portion was issued in 12 parts, the dates and contents of which are given by Sherborn and Jentink (Proc. Zool. Soc. London, 1895, p. 149) as follows. Part I, pp. 1-28, 1844; II and III, pp. 29-60, 1847; IV-VIII, pp. 61-100, 1848; IX-XI, pp. 101-124, 1849; XII, pp. 125-142, 1850. This work and Schlegel's "Kritische Übersicht der Europäischen Vögel," 1844 (q.v.), appear to be rivals for the honor of constituting the earliest work in which trinomial nomenclature is used in the modern conception for geographic races of species.

1 vol. imperial 8vo, pp. I-VI, 1-416. Paris. 1921 (before Febr. 22)¹.

A very important contribution to the study of the hummingbirds. The work is in two parts. The first of these (pp. 1-244) contains synoptic tables to genera, species and subspecies in which sufficient detail is used to give complete diagnoses of each. The genera are arranged in 46 groups or series which are given the name of their most characteristic genus and are described, but not arranged, in tabular form. Many new generic and subspecific names are used. The second portion of the volume (pp. 245-407) consists of a catalogue of series, genera, species and subspecies, with synonymy, distribution and an abundance of footnotes. The remainder of the work contains addenda, corrigenda and indices to series and genera. The work is much more comprehensive than the author's "Catalogue des Espèces Actuellement Connues de la Famille des Trochilides" of 1897.

The title is self-explanatory. The work was issued in 28 parts, the dates and contents of which are given by Waterhouse in the Proc. Zool. Soc. London, 1880, pp. 489-91. Ornithological matter occurred in all of these except Pts. III and XXVIII. Dates, etc. for the birds are as follows. Part I, pll. 1-4, (before Oct.) 1838; II, pll. 5-10, (before Oct.) 1838; IV, pll. 11-17, 1838; V, pll. 18-23, 1839; VI, pll. 24-26, 1839; VII, pll. 27-32, Sept. 1839; VIII, pll. 33-39, Nov. 1839; IX, pll. 40-45, Jan. 1840; X, pll. 46-50, March 1840; XI, pll. 51-57, July 1840; XII, pll. 58-63, Oct. 1840; XIII, pll. 64-66, Jan. 1841; XIV, pll. 67-69, Sept. 1841; XV, pll. 70 and 71, Febr. 1842; XVI, pll. 72-74, Aug. 1842; XVII, pll. 75-80, Jan. 1843; XVIII, pll. 81-86, July 1843; XIX, pll. 87-91, Nov. 1843; XX, pll. 92-95, Aug. 1844; XXI, pll. 96-98, Oct. 1844; XXII, pll. 99-102, March 1845; XXIII, 103-105, Oct. 1845; XXIV, pll. 106 and 107, Dec. 1846; XXV, pll. 108-112, Oct. 1847; XXVI, pl. 113, Dec. 1847; XXVII, pl. 114, July 1848. Each part contained matter relating to several volumes, but the numbering of the plates of each was kept separate and the various matter ultimately was extracted, collected and bound under the five subjects as collated above. Many new species of birds are described herein. Others new species secured on the same expedition, were described previously by Smith in various numbers of "The South African Quarterly Journal" and in an appendix to the "Report of the Expedition for Exploring Central Africa from the Cape of Good Hope," etc., 1836. (See Smith, Andrew, Sir Andrew Smith's miscellaneous ornithological papers, 1880.)

Reprints of 11 papers published in The South African Quarterly Journal and of the ornithological portion of the author's "Report of the Expedition for Exploring Central Africa," published at Cape Town in 1836. The extracts from the "Journal" are as follows.

A Description of the Birds inhabiting the South of Africa. <S. Afr. Quart. Journ. No. I, Oct. 1829-Jan. 1830 pp. 9-17; l.c., No. II, Jan.-April, 1830, pp. 105-120; l.c., No. III, April-June, 1830, pp. 225-241; l.c., No. IV, July-Sept., 1830, pp. 380-392.

These reprints are verbatim from the originals which are extremely scarce, and are published in this form by The Willughby Society (q.v.). All except one are by Andrew Smith. The exception is a single paper by Jules Verreaux which is the only other ornithological article published in The South African Quarterly Journal and which is, therefore, included so as to make the present reprint in effect a copy of all the ornithological matter in that periodical. The editorial preface by the editor gives a sketch of Smith's life and work.

The account of a voyage to New Guinea and the Philippine Islands with the descriptions of many of the plants and animals of these and other places visited en route. The birds are taken up in detail on pp. 51-92, 108-126 and 155-181 and on pll. 20-55, 64-85 and 95-114. Only vernacular names are used but later, 1786-88, the species were discussed and binomial names were applied to them by Scopoli in a paper forming a part of his "*Deliciae Florae et Faunae Insularum*" (Cf. reprint by the Willughby Society, 1882.). 1 vol. (second of two vols.) demy 4to, pp. I-VIIJ, 1-298, pll. 81-140 (by Sonnerat; 5 fold.), numerous decorations. Paris.

The account of the author's observations on the inhabitants of various countries in the Orient, and of the natural history of the same regions. The present volume (II) contains Books 4 and 5, the former devoted to anthropological observations, the latter to natural history, comprising the mammals, birds and plants. The ornithological matter is contained on pp. 148-221 and pll. 94-122. Numerous species are described and figured for the first time, but under French vernacular names only. Later, scientific nomenclature was applied to the species by Sonnerat in a paper forming a part of his "*Deliciae Florae et Faunae Insularum*," 1786-88 (Cf. reprint, 1882.).

A second supplement to Levaillant's "Hist. Nat. des Perroquets," 1801-05 (q.v.), following the volume by Bourjot Saint-Hilaire, 1837-38 (q.v.) and forming the fourth volume of the series. The work was published in 12 livraisons, dated (by Carus and Engelmann) 1857-58. In the introduction to the "Iconographie," the editor (?) of that work announces a proposed "Histoire Naturelle des Perroquets" in 8vo, to include all the species known to date and treated in the preceding volumes, but this work seems not to have appeared. This proposed work is probably that mentioned by Carus and Engelmann under the "Iconographie" in an ambiguous reference which seems to apply to the latter work but is inconsistent with it as it is known (Cf. Coues, Bull. U. S. Geol. Geog. Surv. Terr. V., p. 738, 1879.). This reference announces a *Hist. Nat.*, 1 vol., 8vo., to be published in 1859 and an *Iconographie*, fol. or 4to, with about 120 pll., to appear in 30 parts, issued monthly.

Descriptions, with Latin binomials, of new or otherwise interesting species of birds contained in the museum of Gustavus Carlson. Many of the figures and descriptions are unrecognizable but the collection (more or less injured by moths) came eventually, by several routes, to the Rijksmuseum of Sweden where it was studied by Carl. J. Sundevall. In the first part of a "Kritisk Framställning of Fogelarterna uti Äldre Ornithologiska Arbeten" published in the Kon. Vet. Akad. Handl., B. 2, No. 3, 1857, Sundevall identified most of Sparrman's species, listing 9 forms as dubious and 7 as entirely unrecognizable due to the imperfect condition of the skins and to other causes. The "Museum Carlsonianum" is a very rare work and is very important in view of the new species contained therein.

Descriptions of the birds secured by the author during his expedition with von
Martius to Brazil in the years 1817-1820; with colored plates of the new species,
of which there are a great number. The plates are not always recognizable and
are said to vary in coloration in different copies. The descriptions are not
sufficiently determinative in every case, but the original specimens (at least
many of them) are still in existence and have been studied carefully by Dr.
C. E. Hellmayr. The latter author's "Revision der Spix'schen Typen brasil-
ianischer Vögel," published in the Abhandl. der K. Bayer. Akad. Wiss., II
Kl., XXII Bd., III Abt., pp. 563-726, pll. I and II, May 20, 1906, gives a full
account of the results of these studies. There appears to be a second, revised,
edition of Spix edited by von Martius and published in 1840; about this I can
find little information [Cf. Cat. Libr. Brit. Mus. (Nat. Hist.).].

 1 vol. crown 8vo, 3 pr. ll. (half-tit., tit., publishers' note), pp. IX-XII, 1-420, frontisp., 157 text-figs. London.

A general account of bird-life in its various aspects, presenting facts and anecdotes concerning numerous species selected from the entire class, with chapters on classification, structure, flight, etc. The classification is obsolete and many of the statements presented as facts are now known to be inaccurate, but the little book has some value as a juvenile work. Originally published in 1835, the work passed through a number of later editions, of which the present appears to be the 6th.

Vol. III, pp. I-XVII+1, 1-416, figs. 1-141. Vol. IV, pp. I-XVII+1, 1-545, figs. 1-163. London.

A complete account of the birds of Africa south of the Zambesi and Cunéné rivers. Each species is described, synonymy and distribution are given, and there are copious but concise notes on general habits, food, song and nidification. Tables to families, genera and species are given throughout and a table to the orders is added in Vol. III, pp. VI-VIII. A good bibliography is given in Vol. I. Vols. I and II contain the Passerine forms; the other volumes contain the groups mentioned on their titles. Volume I was written entirely by Stark, who died shortly before its publication. Vol. II was edited by Selater from Stark's manuscript. Vols. III and IV were written entirely by Selater with the assistance of Stark's notes. Of the remainder of the series belonging under the general title of "The Fauna of South Africa," only the volumes on the Mammalia, by Selater, were ever published (1900-01). A "Check-List of the Birds of South Africa," comprising a list of the species contained in the present work, together with such additions as were necessary to bring the work to date, was published in the *Annals of the South African Museum*, III, Pt. 8, 1905.

Stearns, Winfred A.; and Coues, Elliott.

1881-83. **New England Bird Life** | being a | manual | of | New England ornithology | revised and edited from the manuscript of | Winfred A. Stearns | Member of the Nuttall Ornithological Club etc. | by | Dr. Elliott Coues U. S. A. Dillingham | 1881 [1883].

2 vols. post 8vo. Vol. I, 2 pr. 11. (tit. and ded.), pp. 3-324, text-figs. 1-56. Vol. II, 1 l. (advt.), pp. 1-409+1, 1 l. (advt.), text-figs. 1-88. Boston.

According to the editor's preface, the "plan of the work includes brief descriptions of the birds themselves. . . . ; the local distribution, migration, and relative abundance of every species; together with as much general information respecting their habits as can conveniently be brought within the compass of a hand-book of New England Ornithology." The original manuscript was written by Stearns, but was revised and partially rewritten by Coues who assumed responsibility for the accurateness and completeness of the work. The text-figures are all taken from Coues's *Key*, 1st ed., 1872 (q.v.).

(monochr.). Vol. III, pp. I-XIII+1, 1-432, ppl. I-V (1 monochr.;
1 portr.; 3 col., by J. Wolf and J. Smit). London and Norwich.

An excellent "local" ornithology in which the author presents a mass of accurate information relative to the birds of the County of Norfolk, England, secured

from a variety of sources and personally verified where possible. Owing to the painstaking manner in which the work was prepared, it progressed slowly and the author died before it was completed. His portion of the book terminates on p. 160 of Vol. III, at which point the labor was assumed by Southwell who completed the volume and work, quoting largely from Stevenson's notes.

 1 vol. royal 8vo, pp. I-VII+1, 1-185, frontisp., 2 maps (1 col. and fold.), figs. 1 and 2. Philadelphia.

An annotated list of species, giving the breeding range and distribution of each and the evidences of local occurrence of the rarer forms. A bibliography is appended. This main body of the text forms Part II of the work. Part I (to p. 32) contains general remarks on geographical distribution and migration and a discussion of the physical features of the region under consideration.

A popular account of British birds, with common and technical names and their etymology, discussions of habits and characteristics, and descriptions of each species, the latter arranged in convenient, tabular form. The plates, many of which are life-sized, are of variable quality; some of them are excellent but others are not so pleasing. At the end of the work (Vol. V, pp. 941-964) there is a good bibliography compiled by W. H. Mullens. A glossary of vernacular names, technical and English indices, and a list of subscribers are added. The work appeared in 20 parts of about 50 pages and 16 or 17 plates each, as follows (according to Mullens and Swann). **I**, May 1906; **II**, Sept. 1906; **III**, Oct. 1906; **IV**, Dec. 1906; **V**, March 1907; **VI**, June 1907; **VII**, Sept. 1907; **VIII**, Dec. 1907; **IX**, March 1908; **X**, April 1908; **XI**, Aug. 1908; **XII**, Nov. 1908; **XIII**, March 1909; **XIV**, May 1909; **XV**, Sept. 1909; **XVI**, March 1910; **XVII**, Oct. 1910; **XVIII**, March 1911; **XIX** and **XX**, July 1911.

Stresemann, Erwin.

1920. Avifauna Macedonica | Die ornithologischen Ergebnisse der | Forschungsreisen, unternommen nach Mazedonien | durch | Prof. Dr. Doflein und Prof. L. Müller-Mainz | in den Jahren 1917 und 1918 | von | Dr. Erwin Stresemann | Mit 6 Tafeln | München 1920 | Verlag von Dultz & Co.

1 vol. 8vo, pp. I-XXIV, 1-270, 1 l. (conts.), pll. I-VI (on 3 ll.). Munich. July 1920.

A detailed account of the birds of Macedonia, based on a collection of about 3258 specimens, representing 168 forms, secured by Professor Müller and others during the German occupation of the country, and deposited in the Munich State Museum. Detailed notes on measurement, plumages, etc. are given in tabular form. Part 2 of the book (pp. 247-256) gives a brief account of the Macedonian species not secured by the expedition. Part 3 (pp. 257-260)

supplies addenda. Part 4 (pp. 261-268) gives a check-list of all the species, and Part 5 (pp. 269-270) furnishes the explanation of plates. One new subspecies is described and one other new name used. The remaining new species in the collection appear to have been described, previously, by Stresemann in other publications.

1 vol. 8vo, pp. I-XLVI, 1-222, 2 ll. insert (advt.). London.

A working list of 373 species of birds of prey, giving bibliographic references to the accepted name and the various synonyms of each species. A list of the works quoted in the text is given after the introduction. The book is posthumous and was prepared from Strickland's manuscript by his wife and father-in-law who planned to publish the remaining portions of the work at a later date,—a project never realized although two sheets of the second volume were printed in 1860 or later (Cf. Mathews, *Austral Avian Record*, 5, No. 1, pp. 18-19, 1922.). The introduction, dated Sept. 1, 1855, gives a reference to G. R. Gray's "A List" (=Catalogue) "of the Genera and Subgenera of Birds," 1855 (q.v.), which is quoted as already published, but as that work is also of uncertain date, the reference does not aid materially in fixing the date of the present volume.

A detailed catalogue of Swiss birds, discussing each species in its place from a great variety of aspects. It was begun by Studer and Fatio but taken over by Burg with the 4th part in 1907 and continued by him to date. It is not yet complete. An edition in French has been issued more or less synchronously under the title of "Catalogue des Oiseaux de la Suisse," recently changed to "Les Oiseaux de la Suisse" to conform with the corresponding alteration in the title of the German edition, as transcribed above.

A detailed treatise on the known hybrids among wild birds. The account is rearranged from six previous papers by the author, four of which were published in the *Mémoires de la Société Zoologique de France* in 1890-1893 and

two in book form in 1895-96. The work in its present form appears to be the first volume of a projected treatise intended to include other groups besides birds; Allen (*Auk*, 12, p. 384, 1895), in reviewing Pt. 5 of the original papers, notes that the following section is planned to deal with insects and fishes, but I can find no references to the publication of later volumes. The date, 1897, is from the original wrapper which is bound with the present copy.

A general descriptive work on the birds of Sweden. Vol. I, with 84 colored lithographs, was published by Sundevall; the remainder of the book, by Kinberg, after Sundevall's death. Vol. I appeared in 22 parts for which the following dates are available from the *Journal für Ornithologie* and the *Zoological Record*. Pt. I, pp. 1-8, pll. I-IV, reviewed in *Journ. für Orn.*, July, 1857; II, pp. 9-16, pll. V-VIII, ev. Jan. 1858; III, pp. 17-28, pll. IX, X, XV, XVI, rev. Sept. 1858; IV, pp. 29-32, pll. XI-XIV, rev. Of the remainder of the work, I can find no complete data. Pp. 353-520 are dated (in the signature) 1881; 521-704, 1881-2; 705-916, 1881-3; 917-1060, 1881-4; 1061-1220, 1881-5; 1221-1570, 1881-6. The title-page of Vol. II is dated 1883 but was printed in 1886; that of Vol. III is dated 1885 and was printed that same year; the title-page for the fourth volume is missing. The *Zoological Record* lists Parts XXIII-XXVIII, pp. 353-755, under date of 1883, and Pts. XXXVI-XL, pp. 1165-1570, under date of 1887. The title-pages of II and III were, evidently, issued out of place, since they are inserts and contain directions to the binder for their insertion. The present copy has pages 757-972 bound in Vol. II, the title-page of Vol. II at p. 973, and all of Vol. IV in Vol. III.

1 vol. post 8vo, pp. 1-242. Stockholm. 1863 (circa March).

A translation, into German, of the author's "Ett försök att bestämma de af Aristoteles omtalade Djurarterna," published in the *Kongl. Svenska Vetenskaps-Akad. Handl.*, Bd. IV, No. 2, 1862,—a study of the natural history in the writings of Aristotle. A prefatory chapter gives a sketch of Aristotle's life and a short review of those of his books which are cited in the following pages. The birds are treated on pp. 92-173. Most of Aristotle's birds are at

least partially recognized in this work; a few remain unidentified. A preface (on the reverse of the title-page), signed by the publishers, is dated March 1863.

1 vol. 4to (size of 8vo), pp. I-XIV, 1 l. (blank), pp. 1-116. Stockholm.

A critical revision of the woodpeckers, based on Malherbe's "Monographie des Pucidées," 1859-62 (q.v.), an index to which is included. Full descriptions are given of the species, tribes and genera, with the synonymies of the species and notes on their distribution.

1 vol. 4to (size of post 8vo), pp. A-F (pref.), I-LXIX+1 (introd. and transl. of pref. and introd.), 1-187+1, 1*-12* (appendix), 1 pl. Stockholm.

An exposition of the author's system of classification of birds. All groups from families upwards are characterized and the genera frequently are segregated into several groups of subfamily rank which are characterized but not named. Type species are cited for each genus and a certain amount of generic synonymy is given, with types cited for the synonyms. Numerous new genera and one new species are described in the work. The book was issued in two parts, the first of which appeared in 1872 and contained pp. I-XLVIII and 1-72 (Cf. Zool. Record, 1872.); the second completed the volume and appeared in 1873, having been delayed by the illness of the author. Mathews (Birds of Australia, Suppl. 5, p. 130, 1925) cites the date, Aug. 1, 1872, from the back of the original wrapper of Pt. I; he also gives the date of Pt. II as before June 12, 1873, but does not cite the source of this information.

1879-88. [*Finska Fogelägg, Suomen lintuin munia.* Helsingfors. 1879-88.]

1 vol. crown folio, (title and text missing), 25 pll. (col.). Helsingfors.

A series of good chromolithographic plates of the eggs of Finnish birds. The work was issued in 9 parts with 3 pll. in each of Pts. 1-7 and 2 pll. in each of Pts. 8 and 9. The following dates are given by the Zoological Record. Pts. 1 and 2, 1879; 3 and 4, 1881; 5, 1883; 6 and 7, no dates but received by the Library of the British Museum in 1886; 8 and 9, 1888. Text by Johann Axel Palmén was issued with Pts. 1-5, in German and English [according to the Catalogue of the Library of the British Museum (Natural History)] but the Zoological Record quotes only the Swedish title given above. The present copy contains only the plates and has the binding inscribed with the English

title, "Eggs of Finnish Birds | Drawn And Coloured By | G. Sundman."
The figures on the plates are named both in Latin and Swedish vernacular.

(tit., ded., pref. and indices), 45 ll. (text), pll. 92-136 (col.; 101 wrongly numbered 100). London. 1820-23 and 1829-33.

A series of excellent hand-colored plates, drawn by the author, accompanied by descriptions of the species and some of the genera and more or less detailed discussions of the same. Many new names are used. The work appeared in parts but it is impossible to affix definite dates to these parts or even to give their exact number or content. Mathews (*Austr. Av. Rec.* 4, p. 23, 1920), on the authority of Sherborn, gives Oct. 1, 1820 as the date of the first number which contained 6 pll. This seems to have been followed regularly each month by similar parts, with contents as follows from data given by Sherborn (*Index Anim.*, Sect. 2, Pt. 1, p. CXX, 1922). Nov. 1820—Aug. 1821, 11 parts (6 pll. each), pll. 7-66; Sept. 1821, 1 part (5 pll.), pll. 67-71; Oct. 1821—Sept. 1822,

¹Three sectional titles are the same as the title quoted above except for the volume-number which is replaced by "Vertebrosa. Part I"; "Entomology. Part I"; and "Conchology. Part I."

²The sectional titles for the second series, although bound with the first volume, agree in lettering and date with the title-page of Vol. III from which they differ only in the substitution of "Second series. The birds."; "Second series. The insects."; and "Second series. The shells." for "Vol. III. Second series." No sectional subtitles were issued with Vols. II and III of this series.

12 parts (4 pll.), pll. 72-119; Oct. 1822—Sept. 1823, 12 parts (5 pll.), pll. 120-179; Oct. 1823, 1 part (3 pll.), pll. 180-182. Title-pages and indices appeared in the numbers for Sept. 1821 (probably Oct. 1822?), and Oct. 1823. The number of parts (37) thus agrees with a statement by Swainson in a bibliography which is given in Vol. I of the second series.

The second series is even more in doubt than the first. According to Mathews (l.c.) it was announced to begin on February 29, 1829 (is this date possible?); 3 parts were reviewed as early as April but only 6 were published in all in that year, being reviewed in Febr. 1830. Four parts, including one with titles, etc., appeared in 1830, and succeeding parts were issued regularly for the first 8 months in 1831. From Sherborn (*Index Animal. Sect. 2, Pt. 1, p. CXX*, 1922) and from the indices of Vols. I-III of Ser. 2, which give the number of plates and the parts in which they appeared, the following arrangement appears to be more or less accurate. Pts. 1-6 (5 pll.), pll. 1-30, 1829; Pts. 7-9 (5 pll.), pll. 31-45, 1830; Pt. 10, title-page and index (Vol. I) but no plates, 1830; Pts. 11-18 (5 pll.), pll. 46-85, 1831; Pt. 19 (5 pll.), pll. 86-90, 1832; Pt. 20 (1 pl.), pl. 91 and title-page and index (Vol. II), 1832; Pt. 21 (5 pll.), pll. 92-96, 1832; Pts. 22-29 (5 pll.), pll. 97-136, 1833; Pt. 30, title-page and index (Vol. III) but no plates, 1833. Swainson (*Loudon's Mag. Nat. Hist. IV, p. 272*, 1831) writing under date of Febr. 1831, says that Pts. 17 and 18 appeared about a month previously.

To complicate matters, it is apparent, from a statement by Swainson in the preface to Vol. III of Ser. 2, that a reissue was made of some of the earlier numbers of the work. An examination of the present copy reveals numerous plates in Ser. 1, Vols. I-III, and Ser. 2, Vol. I, No. 1, which are watermarked 184(0-1 ?; final numeral trimmed off). What changes, if any, may have been made in the reissues, I do not know beyond the fact that certain of the plates in the first series bear a date subsequent to that of their original issue. The following cases have been noted. Vol. I, pl. 49, "21.3.1832." Vol. II, pl. 100, "25.1.1832"; pl. 115, "17/3/1832." Vol. III, pl. 151, "1829 20 May"; pll. 154, 155 and 156, "1828." On (advertising) p. 34 of Jardine's "Naturalist's Library" *Ornithology* Vol. II, dated 1833, there is a statement that the second edition of the first series of Swainson's work would be ready that spring. This may represent still another edition than the one in hand.

Of the 318 plates published in the work, 117 are ornithological. Ser. 1, Vol. I contained 24; Vol. II, 20; and Vol. III, 26 plates of birds, and Ser. 2, Vol. I, 24; Vol. II, 15; and Vol. III, 8 plates of birds. A curious error occurs on pl. 97 in Ser. 2, Vol. III, where Swainson, usually a most accurate draughtsman, represents a bird with its feet crossed in an impossible attitude.

1 vol. 8vo, tit., pp. 1-4, pll. 1-78 (1, 13, 31, 48, 60, 69, 71, 72 and 74-78 num. by hand; 67 and 68 wrongly num. 72 and 73 respectively, - corrected by hand) (col.). London.

A series of 78 hand-colored plates of Neotropical birds, with a list of species prefixed, giving English and Latin names. Most of these names also appear on the plates but pll. 48, 69, 70 and 73-78 have no Latin names on them, the names on pll. 6-8, 40, 41 and 58 have been amended in the list, and the name on pl. 71 has been entirely changed. The work was issued originally in parts from 1834-36? Engelmann cites 7 parts. Pt. 1, containing 13 pll., is reviewed in Loudon's Mag. of Nat. Hist., Vol. VII, p. 183, "March" 1834. Ridgway (Bull. U. S. Nat. Mus., 50, Pt. 2, p. 56; Pt. 3, p. 529; and Pt. 4, pp. 471 and 542) quotes pl. 15 as in Pt. 2, 1834; pl. 37 as in Pt. 3, 1836; pl. 48 as in Pt. 4, 1836? and pl. 53 as in Pt. 5, also 1836? Tschudi (Archiv. für Naturg., Jahrg. 11, 1, p. 362, 1845) ascribes pl. 58 to Pt. 5, under date of 1841, but it is possible that Tschudi had a copy of the work similar to the one at hand which seems to be properly dated 1841, throughout. Swainson, in his "Animals in Menageries" (Cf. Lardner, Dionysius, The Cabinet Cyclopaedia, 1837.), mentions pll. 63 and 64 as though they were already published. This note, if accurate, would place Pt. 5 as of December 1837 or before. Coues catalogues a copy containing only 62 plates as comprising Pts. 1-5, Pt. 6 missing, but it is probable that this copy lacked, also, the last three plates of Pt. 5. The conclusion which seems most probable (but which needs confirmation) is that there were 13 plates in each of the six parts as originally issued.

No text appears to have been published with the original edition, which bore as title, "Ornithological Drawings, being Figures of the Rarer and most Interesting Birds of Brazil" (Cf. Engelmann.) or "The Ornithological Drawings of William Swainson - - The Birds of Brazil" (Cf. Coues.). The present edition seems to have appeared as a separate volume with a new title-page and with the addition of a list of plates, while the plates (at least in part) were newly printed. Several kinds of paper are used for the plates; pll. 74-78 are on thin paper which is mounted on some of a heavier quality; pll. 4 and 14 are watermarked "184-" (the final figure lost by trimming the plate). Quotations from the present work may properly be dated 1841. Engelmann catalogues both this edition and the original. Many new names date from the original work.

I vol. 8vo, pp. I-XVII+1, 1-42. London.

A list of the specific and subspecific names of British birds [based on Hartert,
 Jourdain, Ticehurst and Witherby's "Handlist of British Birds," 1912 (q.v.)],
 arranged chronologically, with original references. The generic names employed
 in the list are catalogued separately in the same manner, and supplementary
 lists of discarded generic and specific names are listed with their established
 equivalents. The work is intended as a supplement to Mullens and Swann's
 "A Bibliography of British Ornithology," 1916-17 (q.v.). The preface is
 dated "August 1923."

Popular discussions of the habits of a large number of British birds with 144 chromolithographs of birds by Thorburn and 16 chromolithographs of eggs (some by "A. F. L."). At the close of each volume is a chapter on "Eggs and Egg-Collecting" by R. Kearton. Only Vol. I is dated; I have taken the final date from Mullens and Swann by whom, also it is queried. Later editions are mentioned by Mullens & Swann without date.

1 vol. royal 8vo, tit., pp. 1-24, 10 ll. (unnum.), pll. 1-16 (col.). London.

A popular account of certain British warblers, with descriptions and notes on habits, methods of capture, behaviour in captivity, etc. The plates are hand-colored. There is some uncertainty as to dates of publication and manner of issue. Mullens and Swann note the existence of several copies with only six plates (as indicated on the title) and with abbreviated text; these may constitute an original edition. They also quote Neville Wood (*Ornith. Text Book*, p. 37, 1836) for inclusive dates of 1823 to 1832, and C. T. Wood (*Ornith. Guide*, 1835) for the statement that the work appeared in 3 numbers. In the *Mag. Nat. Hist.*, I, p. 57, May 1828, Pts. I-III (including pll. 1-11) are reviewed and pll. 12-16 are promised to follow. The next year in the same journal, II, p. 50, March 1829, the work is noted as being complete with 16 pll. To confute this clear statement, pl. 7 of the present copy is on paper watermarked "1829"; this may indicate a re-impression. The work is rather rare.

- A most important monograph of Peruvian ornithology. Vols. I-III contain exceedingly detailed descriptions and synonymy, notes on habits from the field notes of collectors, and accounts of the distribution of each of 1350 species with the authority for the records. Vol. I (pp. 9-73) also contains topographical and distributional notes and accounts of localities visited by Stolzmann and Jelski. The fourth volume consists of synoptic tables to the genera and species treated in the work, and a Latin index to the first three volumes. The actual days or months of issue of the four volumes are doubtful; the years appear to be correctly stated on the title-pages. Vol. I is reviewed in the *Ibis* for Oct. 1884; II in April 1885; III in April 1886 and the "Tables" in January 1887. The book is indispensable to the worker in Peruvian ornithology.

1 vol. post 8vo, pp. I-VIII, 1 l. (errata), pp. 1-270, 1-34. Amsterdam.

A catalogue of the author's collection of birds and monkeys with descriptions of new species of birds and a list of the species of birds and mammals for exchange. Pp. 6-196 contain the systematic list of birds, with Latin and vernacular names and references to literature for the known species, and with vernacular names alone for the undescribed species which are not described here but noted, simply, as nondescript. The serial numbers of the author's collection are given throughout. Pp. 197-270 contain the descriptions of the new species, but no Latin names are used. The species were afterwards named by a variety of authors, chief among whom was Vieillot who is said to have copied many of the descriptions of Temminck or to have based his names upon an examination of the same specimens used by the latter. Hartlaub in Jardine's "Contributions to Ornithology" for 1849, published a review of the names given to the birds in this work, as, "A Systematic Index to a series of descriptions of birds, published by C. J. Temminck," etc. The list of birds and mammals for exchange occupies pp. 1-34 at the close of the present volume. The Ayer Ornithological Library is indebted to Dr. Charles W. Richmond for the copy of this rare pamphlet.

cover), pll. I-III. Vol. III, 2 pr. ll. (half-tit. and tit.), pp. 1-757+1, 1 l. (titles for cover), pll. IV-XI. Amsterdam.

A monograph of the pigeons and gallinaceous birds (as construed by the author). Vol. I, besides a preface and general introduction, contains the account of the pigeons,—a reprint of the text which Temminck had prepared for his illustrated folio that was stolen by Madame Knip (Cf. Knip, *Les Pigeons*, 1807-11.). Vols. II and III relate to the gallinaceous birds and contain an account which Temminck had in preparation for a folio but which he was deterred from publishing in that form by the misfortune he experienced with the volume on pigeons. A detailed statement of the transaction is given on pp. 640-644 of Vol. III. Numerous new names are used.

Intended as a supplement to Buffon's "Planches Enluminées" (Cf. Buffon, *Histoire Naturelle des Oiseaux*, 1770-86.) which it follows in design and size, having appeared in large folio as well as in its present form. The "Tableau Méthodique," belonging in Vol. I, contains Buffon's species and plates arranged in systematic order with those of the present authors. The work was issued in 102 livraisons, the earlier numbers being published by Dufour and d'Ocagne, the later ones by Levraut, from August 1820 to Jan. 29, 1839. G. R. Crotch (Ibis, 1868, pp. 499-500) published a list of dates for most of the livraisons, extracted from the "Bibliographie Française" (= "Bibliographie de la France" ?). Sherborn (Ibis, 1898, pp. 485-488) revised Crotch's list, and Mathews (Birds of Australia, 7, pp. 468-471) added information secured from the "Bibliographie de la France." Some of the earlier livraisons, recorded in the latter paper, seem to have been supplied to subscribers considerably later than the dates of their original issue, from which fact Mathews deduces a second edition of these numbers. Stresemann (Anzeiger Orn. Ges. Bayern, No. 7, pp. 54-55, Nov. 20, 1922) adds several dates not in the older lists. From the different sources, the earliest dates given for receipt or publication of the various livraisons are as follows.

1- Aug. 1820; 2- Sept. 1820; 3- Oct. 1820; 4- Nov. 1820; 5- Dec. 1820; 6- Jan. 1821; 7- Feb. 1821; 8- March 1821; 9- April 1821; 10- May 1821; 11- June 1821; 12- July 1821; 13- Aug. 1821; 14- Sept. 1821; 15- Oct. 1821; 16- Nov. 1821; 17- Dec. 1821; 18- Jan. 1822; 19- Feb. 1822; 20- March 1822; 21- April 1822; 22- May 1822; 23- June 1822; 24- July 1822; 25- Aug. 22, 1822; 26- Sept. 1822; 27- Oct. 1822; 28- Nov. 1822; 29- Dec. 1822; 30- Jan. 1823; 31- Feb. 1823; 32- March 17, 1823; 33- April 1823; 34- May 1823; 35- June 20, 1823; 36- July 1823; 37- Aug. 30, 1823; 38- Sept. 27, 1823; 39- Oct. 25, 1823; 40- Nov. 1823; 41- Dec. 25, 1823; 42- Jan. 1824; 43- Feb. 28, 1824; 44- March 27, 1824; 45- April 1824; 46- May 22, 1824; 47- June 25, 1824; 48- July 31, 1824; 49- Aug. 28, 1824; 50- Sept. 1824; 51- Oct. 23, 1824; 52- Nov. 27, 1824; 53- Dec. 25, 1824; 54- Jan. 1825; 55- Feb. 26, 1825; 56- March 1825; 57- April 23, 1825; 58- May 28, 1825; 59- June 25, 1825; 60- July 23, 1825; 61- Aug. 27, 1825; 62- Sept. 24, 1825; 63- Oct. 9, 1825; 64- Dec. 21, 1825; 65- May 27, 1826; 66- June 10, 1826; 67- July 12, 1826; 68- Sept. 16, 1826; 69- Oct. 28, 1826; 70- Dec. 27, 1826; 71- Feb. 28, 1827; 72- April 25, 1827; 73- June 30, 1827; 74- Sept. 22, 1827; 75- 1827; 76- March 1, 1828; 77- April 23, 1828; 78- June 1828; 79- Aug. 1, 1829; 80- Sept. 5, 1829; 81- Oct. 1829; 82- Jan. 2, 1830; 83- Feb. 20, 1830; 84- May 8, 1830; 85- July 3, 1830; 86- Sept. 4, 1830; 87- Jan. 22, 1831; 88- May 14, 1831; 89- Feb. 11, 1832; 90- July 28, 1832; 91- Dec. 20, 1832; 92- July 26, 1834; 93 to 99- 1835; 100 to 101- 1836; 102- Jan. 29, 1839.

The publication commenced as a series of plates, and 20 livraisons appeared, without text other than the vernacular names on the plates, but (which is very important) with Latin and vernacular names and the habitats of the species printed on the wrappers (Cf. Vol. I, Prospectus, p. 8; also Sherborn, l.c.). Since there were changes made in parts of the text from time to time, as shown below, and since other irregularities exist, it is desirable to quote, wherever possible to obtain them, the names given on the wrappers. Sherborn pointed

out that the text to the first 20 livraisons appeared with that of the 21st livraison and that, thereafter, text and plates were issued together. In some cases, however, the text and the plate of certain species were not in the same livraison. Stresemann offers information tending to show that the first 20 livraisons of text were not issued simultaneously but that they appeared at various dates up to December 1823, but the data which he quotes are rather confusing because of overlapping serial numbers.

The original plan proposed 6 plates for each livraison, and, in most cases, this number seems to have been issued. The 101 livraisons (the 102nd contained only titles, table, etc.) contained only 600 plates, so it is apparent that there was a loss of 6 plates during the course of publication. An analysis of the livraison-numbers on the sheets of text shows a probability that livraisons 27, 63 or 64, 77, 94 and 101 each contained but 5 plates; that 75 or 76 contained 7 plates; and that 82 contained but 4 while 83 contained 6 plates, or that 82 and 83 each contained but 5 plates. There are indeterminate irregularities in the 87th to 89th livraisons, also. Exact calculation is impossible since some of the questionable plates are described in the same pages or paragraphs with other plates of the same species whose numbers are very widely separated, and the text was issued with these other plates.

The following irregularities have been noted in the copy at hand. In Vol. I, the text to pl. 13, livr. 3, and in Vol. III, the discussion of the genus *Pogonias* in livr. 34, were suppressed and substitute sheets were published later which were given the original livraison-numbers. The dates of the reissues are indeterminable as are the Latin name originally given to the subject of pl. 13 and the altered matter of livr. 34. In Vol. IV, livr. 43, the text to pl. 254 was suppressed and replaced by new text in livr. 95, correctly numbered. In Vol. II, the subjects of pl. 21 (livr. 4) and pl. 34 (livr. 6) are described on opposite sides of a leaf in livr. 4; in livr. 17 the text to pl. 98 alters the name first given on the wrapper which accompanied the plate, but the suppressed name is not quoted. The "Tableau Méthodique" of Vol. I, published in livr. 102, suppresses an earlier one published in livr. 87. Many leaves of text, dealing with species figured on two or more plates which are separated by a great interval of numbering, appear to have been issued with the first of the respective plates, but they discuss the other plates which had not then been published; Vol. I, pll. 192 and 224, with text in livr. 33, presents a case in point. Sometimes the first plate came out without text but was discussed with a second plate in a later number. Absolute precision in citing names from the book will be possible only when a set of original wrappers is available for collation.

Minor errors occur in the "Tableau Méthodique" (where plate-numbers are wrongly quoted or placed in the wrong column) and in the numbering in the text and on the plates.

Laugier's share in the work is not clear aside from the fact that many of the specimens described are from his collection. Temminck is to be credited with all nomenclature (Cf. Vol. I, Prospectus, p. 9.). The Prospectus which explains the nature of the work, is from the pen of Cuvier. An unnumbered page of Postscript, issued by Temminck with the 101st livraison, is dated August 30, 1836. A supplement is found in the "Iconographie Ornithologique" of Des Murs, 1845-49 (q.v.).

A manual of European ornithology, forming the second edition of a work of the
same title published in 1815 in Amsterdam. In the present edition two parts
were issued in 1820; the third part, comprising a supplement to Pt. I, appeared
in 1835 and the fourth in 1840,—the latter containing the supplement to Pt.
II, a bibliography to Pts. III and IV, and a table correlating the matter of
the whole work. Copies exist in which the second part contains a title different
from that quoted above and it is possible that the one at hand is of later issue.
Probably, only the title-page has been reprinted (publisher, printer and date
are more or less in agreement in Pts. II and IV). Pt. I (pp. XLIV-XLVJ)
contains a bibliography and (pp. XLVIJ-CXV) a detailed presentation of a
general classification of birds. The latter is of considerable importance outside
of European ornithology since it is not restricted to the European fauna and
since it contains many new names. In Pt. III (p. LXIX) it is announced that
illustrations of the species described in the present work are in course of publi-
cation by Werner (J. C.). These illustrations were issued in 1848 under the
cover title, "Atlas des Oiseaux d'Europe, pour servir de complément au Manuel
d'Ornithologie de M. Temminck," changed in a later issue and on the title-page
to, "Les Oiseaux d'Europe" by Werner (q.v.). They were sometimes offered
for sale in combination with Temminck's "Manuel" as a single work, but,
although complementary, the two works are distinct. Engelmann cites the
"Manuel" under dates of 1820, '35, '39 and '40; the reason for the "39," I am
unable to determine.

An exposition of Abbott H. Thayer's views on the theory that almost all animals possess a "coloration that matches the background" and serves as a "device for the concealment of its wearer, either throughout the main part of this wearer's life, or under certain peculiarly important circumstances." The illustrations are designed to demonstrate the theory, and the colored plates were prepared by painting birds or other animals against a background in which the colors, or even color-patterns, of the specimens were reproduced. The work has been severely criticised and warmly defended. Among the important papers discussing it may be mentioned the following. F. H. Allen *Auk*, 39, pp. 489-507, 1912. J. A. Descriptions of the eggs and nidification of European birds, with hand-colored plates of many of the eggs. At least one new name is used, *Anser brevirostris*, in Pt. V, p. 28. The work appeared in five parts although originally planned for six (Cf. Pref. p. VI.). Each part bears a title-page which is essentially that of the complete volume, with the exception of the number of the part, contents, plates and date which replace ll. 19-20 as follows.

Erste [-Fünfte] Abtheilung | Raubvögel - Krähenarten [Insectenfresser (*Pt.* 2.); Körnerfresser (*Pt.* 3.); Körnerfresser. Sumpfvögel (*Pt.* 4.); Wasservögel. | Vom Herausgeber allein bearbeitet (*Pt.* 5.)]. | Mit IV [(*Pts.* 1-3.); VI (*Pt.* 4.); X (*Pt.* 5.)] Kupfertafeln. | Leipzig, 1825 [1826; 1829; 1830; 1838]. A small original drawing of an egg, signed by L. Thienemann, is pasted on the title-page of Pt. I. As noted, F. A. L. Thienemann claims entire authorship for the fifth part of the work. The other parts are probably to be ascribed to all three authors. The present copy is from the library of William Yarrell and contains the identification of the various figures of eggs written under each in his handwriting. A more elaborate supplementary work by Thienemann is his "Einhundert Tafeln," etc., 1845-56 (q.v.).

A work similar to the author's "Systematische Darstellung," etc., 1825-38 (q.v.), but of wider scope and not confined to European species. It was issued in 10 parts, the dates and contents of which are given as follows by the "Catalogue of the Library of the British Museum (Natural History)." Pt. 1, pp. 1-48, pll. I-X, 1845; 2, pp. 49-96, pll. XI-XX, 1846; 3, pp. 97-144, pll. XXI-XXX, 1848; 4, pp. 145-192, pll. XXXI-XL, 1849; 5, pp. 193-240, pll. XLI-L, 1850; 6, pp. 241-288, pll. III, dated October 1856, advises that ill health has interrupted the course of the work and that there are three plates yet unpublished and much of the text unwritten. The text on p. 432 stops in the middle of a sentence and was never completed. The title on the wrappers was "Fortpflanzungsgeschichte der gesammten Vögel nach dem gegenwärtigen Standpunkte der Wissenschaft." There are said to be new names in the book ascribed, erroneously, to other authors; *Todirostrum margaritaceiventer* is renamed *Fluvicola margaritacea* on p. 311.

A comprehensive discussion of all the birds of Ireland, with reference to habits and characteristics, is contained in the first three volumes. The author's evident intention was to publish similar volumes on all of the zoological groups, but his death in 1852 put an end to the project. His notes were bequeathed to Robert Patterson and James R. Garrett with the request to edit and publish them, a task which resulted in Vol. IV. The ornithology was completed in the three first volumes and is entirely from the pen of Thompson. The work is highly praised by Coues.

A series of 13 papers describing the ornithology of the Challenger expedition, under the editorship and partial authorship of Sclater and forming part VIII of Vol. II of the Zoology of the expedition under the general editorship of Thomson. All of the papers, with the exception of Appendix I ("A List of Birds' Eggs Obtained during the Challenger Expedition") were published previously in the Proc. Zool. Soc. London, some changes being made in the present reprints. The authorship of each paper and the reference to its place of previous publication are given for each paper, except in the case of Appendix I. The plates are hand-colored and are very fine.

Friedländer und Sohn. | 1897 [*mut. mut.*].

A series of monographs issued at irregular intervals and still in course of publication. Five numbers have appeared on birds, Nos. 1, 2, 9, 15 and 18, by Ernst Hartert (1897), Walter Rothschild (1898), Ernst Hartert (1900), Otto Finsch (1901) and Charles E. Hellmayr (1903), respectively. These parts are collected and bound in one volume in the present copy. Owing to separate pagination and various changes in title-pages, I have catalogued each monograph under its author (q.v.). Begun by the Deutschen Zoologischen Gesellschaft, the work was issued latterly by the Königlich Preussischen Akademie der Wissenschaften zu Berlin. In addition to the title-pages (with alterations) as quoted above, each part bears an additional title-page with the same import but with the general title and the lines relating to editorship, etc., condensed while greater prominence is given to the individual title and author.

1 vol. royal 8vo, pp. I-XVIII, 1-545. Paris.

A catalogue of European birds, arranged in two series, on opposite pages. The left-hand series, or page, gives the nomenclature adopted by Degland and Gerbe, "Ornithologie Européenne," 1867 (q.v.), with page-references to that work; species or subspecies subsequently described are indicated but not named. On the opposite page, with corresponding numbers, modern classification is given according to Hartert, "Vögel der Paläarktischen Fauna," 1903-22 (q.v.), with references to original descriptions, to Dresser's "History of the Birds of Europe," 1871-82 (q.v.), and to occasional synonyms, and with marginal notes on distribution; species or subspecies not given by Degland and Gerbe are briefly described or are characterized by a citation of their limited range, etc.

Accounts of 61 species of North American game birds with brief, general descriptions and notes on the various vernacular names applied to the species by hunters.

A second copy is at hand, lacking the date on the title-page and slightly altered in binding; otherwise identical.

Tschudi, Johann Jacob von. (Cabanis, Jean.)

1844-46. Untersuchungen | über die | Fauna Peruana | von | J. J. von Tschudi, | Doctor der Philosophie [*etc.*, 2 lines.] | St. Gallen. | Druck und Verlag von Scheitlin und Zollikofer. | 1844 - 1846.

1 vol. imperial 4to, 3 pr. ll. (tit., ded. and pref.), pp. I-XXX (introd.), 1 l. (subtit. "Therologie"), pp. 1-262, 1-316 (incl. subtit. "Ornithologie"), 1-80 (incl. subtit. "Herpetologie"), 1-35 (incl. subtit. "Ichthyologie"), pll. I-XVIII (col.; Säugethiere; by J. C. Weber, L. Oppenheim, Jos. Dinke., Theodor Fischer, and Schmidt), I-XXXVI (col.; Vögel; by Jos. Dinkel, Schmidt and J. Werner)

I-XII (col.; Amphibien; by J. Werner), I-VI (col.; Fische; by J. Werner). St. Gallen.

A detailed discussion of the vertebrate fauna of Peru based on the author's investigations during five years of travel in that country. The section on birds bears the following subtitle,—“Ornithologie | bearbeitet | von | Dr. J. J. Tschudi | mit Anmerkungen | von | J. Cabanis, | Adjunkt am zoologischen Museum in Berlin | 1845 und 1846.” It contains a preface, a systematic list of species (pp. 15-56) and the general text, which includes descriptions of several new species by Cabanis. Most of the new species were described by Tschudi in the *Archiv für Naturgeschichte*, 10, Hft. 3, pp. 262-317, July 1844 and 11, Hft. 4, 1845. The entire work appeared in 12 Lieferungen, but there is disagreement among bibliographers as to the issue of the ornithological portions. Lafresnaye (Rev. Zool., 1848, p. 5, footn. 1) remarks that the figure of *Scaphorhynchus chrysocephalus* on pl. 8, fig. 1 of Tschudi was not accompanied by the description; this plate is given the date, 1845, on a following page (l.c., p. 7). Dean (Bibliogr. of Fishes, Pt. 2, p. 565, 1917), quoting Sherborn and the Isis, places 12 plates of birds in Pts. 3-5 issued in 1845, and 5 plates and all of the text of birds (including the conclusion of the mammals and all of the reptiles and fishes) in Pts. 6-12 issued in 1846. Sherborn (Index Animalium, Sect. 2, Pt. I, p. CXXIV, 1922) places pp. 1-32 of birds (with the end of mammals) in Pt. 6, 1846, and the rest of the birds (with reptiles and fishes) in Pts. 7-12, 1846. Engelmann includes pll. I-XVIII and pp. 1-32 of birds in Lieferungen 4-6, dated 1844-46, and adds 8 signatures (to p. 96) and 6 pll. (to pl. XXIV) in Lief. 7, dated 1846. Andreas Wagner (*Archiv für Naturg.*, 12, Hft. 2, p. 168, 1846) says that the 6th Lieferung appeared in 1845 and contained all the systematic list (to p. 56). Hartlaub (*Archiv für Naturg.*, 13, Hft. 2, p. 50, 1847) announces the appearance of the remainder of the text in 1846. Schomburgk (*Reisen in Britisch-Guiana*, Pt. 3, p. 500, footn., 1848) mentions p. 70 of Lief. 7 of Tschudi. It is evident, in any case, that the descriptive text relating to birds all appeared in 1846 with most of the plates. If pll. I-XII appeared in 1845, the fact does not affect nomenclature since all of the species there figured were described in the *Archiv für Naturg.*, 10, Hft. 3, July 1844. The name on pl. I is suppressed on p. 87, footn.

Natural Sciences of Philadelphia. | [*Quot.*, 5 lines.] | [*Seal.*] | Philadelphia: | Caxton Press of C. Sherman, Son & Co.

1 vol. post 8vo, pp. 1-15+1. Philadelphia.

A list of 201 birds of East Lothian, Scotland, with notes on seasonal distribution, abundance, local records, etc. The book is undated and "1863" is quoted on the authority of Coues and of Taschenberg. The present copy is printed on vellum and contains the following pencilled inscription. "Unique copy. The only copy printed on vellum. The author's own copy, sold by his grandson, 1922. American-printed ornithological works on vellum are almost unknown." A second edition, under the same title (q.v.), was published in Glasgow in 1867.

1 vol. royal 4to, pp. I-VII+1, 9-48, frontisp. (col.; by Edwin Sheppard), tit.-vign. and 12 text-figs. (col.; by William Sinclair). Glasgow.

A second edition of the author's earlier work of the same title, 1863 (q.v.), with notes on 235 species and with colored illustrations. A note on the reverse of the title-page announces, "The impression has been limited to one hundred and fifty copies 8vo, and fifty 4to—two of the former being on vellum." Mul-lens and Swann note that all but twelve of the 4to edition (of which the present copy is one) were destroyed by a fire at the publishers.

1 vol. 4to (size of royal 8vo), pp. I-X, 1 l. (list of illustrs. and resumé of spp.), pp. 9-62, tit.-vign. and 19 text-figs. (by Alex. Wilson, William Sinclair, Edwin Sheppard, John Faulkner, M. Julliard, William Bartram and Frank Bott). Glasgow.

An annotated list of 342 birds of "Pennsylvania eastward of the Alleghany Mountains, and of New Jersey, including the coast line which extends from Sandy Hook to Cape May." Notes are given on abundance, dates of occurrence, vernacular names, etc. The drawings after Wilson were taken from his portfolio after his death. A note on the reverse of the title-page announces that the edition of this work was limited to 150 copies 8vo (including the present copy which is 8vo in size although 4to in composition) and 50 copies 4to—two of the former being on vellum. There is also an edition of the same date published in Philadelphia (q.v.). A detailed account of the work appeared in "Cassinia," No. XX, pp. 1-6, 1916.

 thian;" [etc., 4 lines.]. | [Quot., 4 lines.]. | **Philadelphia:** | Henry
 Grambo & Co., Chestnut Street. | 1869.

1 vol. 4to (size of royal 8vo), pp. I-VII+1, 5-50, (orig. wrapper with
 vignette). Philadelphia.

An American edition of the work published the same year in Glasgow under the
 same title (q.v.). The two editions differ in various particulars. The title-
 pages are distinct (as shown in above transcriptions). There are no illustra-
 tions in the present edition (except on the wrapper) and the portion of the
 preface referring to the artistic matter is omitted, necessitating some verbal
 changes in adjacent paragraphs. The space left by the omission of the illus-
 trations has been partially filled by combining adjacent pages, leaving the
 "page make-up" of the letterpress unaltered, although the numbering is
 changed. This was made possible by the arrangement of the cuts, but the
 spaces still left between sections of the work are very uneven in size. Two
 changes in nomenclature are to be noted. *Chordeiles Virginianus* and *Ardea*
cærulea of the Glasgow edition are changed to *Chordeiles popetue* and *Ardea*
caerulea, respectively. Coues is of the opinion that the present edition is the
 first, but I believe that the Glasgow edition was printed first, although it may
 not have been issued until later. Both editions were printed in Glasgow and
 apparently from the same plates, but the typography is rather clearer, and
 the impression sharper, in the Glasgow edition while the irregular spacing in
 the present issue points to omission, rather than to insertion of matter.

Costa Rica, I, pp. 103-133, 1887) although Underwood records fewer forms than Zeledón and places the species in fewer families, dropping all of Zeledón's trinomials in favor of obsolescent binomials.

The ornithological portion of the report on the U. S. and Mexican Boundary Survey, being the second article of Pt. II of Vol. II. The text consists of a list of the species and specimens of birds collected on the survey, with field

notes; the full report with descriptions, etc., was included in Baird, Cassin and Lawrence's extended paper in Vol. IX of the Reports of Explorations and Surveys - - for a railroad from the Mississippi River to the Pacific Ocean, published the preceding year (Cf. U. S. Pacific Railroad Surveys, 1858.). The colored plates, for which the present work is chiefly valued, were not included in the Pacific Railroad Survey report but were utilized, together with the plates from other parts of that work, to form the atlas accompanying Baird, Cassin and Lawrence's "The Birds of North America," 1860 (q.v.).

1 vol. medium 4to, pp. I-LVI, 1-1005. Washington.

The most important work on North American birds up to its date since Audubon and Wilson. The work consists of a critical, descriptive account of all the birds of North America, north of Mexico, and is not restricted to the species collected by the Pacific Railroad Surveys. Most of it is by Baird, but pp. 4-64, 689-753 and 900-918 are by Cassin and pp. 820-900 by Lawrence. Pp. XVII-LVI were reissued, with separate title-page, in 1858 as Baird's "Catalogue of North American Birds" (q.v.). The entire volume was reprinted in 1860 with few alterations and issued, together with plates from other volumes of the Pacific Railroad Survey reports, the U. S. and Mexican Boundary Survey, and other sources, as Baird, Cassin and Lawrence's "The Birds of North America" (q.v.)

The present volume also exists as "House of Representatives. Ex. Doc. No. 91."

The present volume is composed of the ornithological papers contained in Vol. X of the Pacific Railroad Survey reports, extracted and bound together with the general title to Vol. X. Vol. X was of composite structure, containing miscellaneous matter properly belonging to other antecedent volumes. Thus,

Baird's paper is a part of Gunnison and Beckwith's report in Vol. II; Kennerly's paper belongs to Ives's report in Vol. IV; Heermann's first article belongs with Parke's report in Vol. VII; his second, with Williamson's report in Vol. V. Regardless of the confusing dates on the titles and subtitles of the various reports, all the matter in Vol. X was published in 1859.

The general title also appears as "House of Representatives. Ex. Doc. No. 91."

A handbook of information relative to the birds of Ireland, containing the records and materials acquired since the publication of William Thompson's "Natural History of Ireland," 1849-56 (q.v.). Numerous collaborators are thanked for contributions, especially R. M. Barrington whose immediate activity in issuing another publication, ? "The Migration of Birds, 1900 (q.v.), alone prevented his name from appearing on the title-page of this one. Most of the text is from the pen of Ussher; several articles are signed by Warren who, however, furnished abundant material for other portions of the work. Mullens and Swann record a large paper edition with portraits of the authors.

The zoological portion of the report on the voyage of La Bonite around the world in 1836-37. The entire work (publ. 1840-66) comprises 15 vols. of text (in 11) and 3 vols. of plates, including a separate volume on Zoophytology (published in 1844) which is not included in the present set. The zoology was entrusted to Eydoux and Souleyet who began the preparation of Vol. I (including the birds). The death of Eydoux on July 6, 1841 (Cf. p. II of pref., Vol. I.) necessitated the completion of the project by Souleyet, in which he acknowledges the assistance of P. Gervais. The ornithological matter in Vol. I is contained on pp. 69-132, of which pp. 107-132 were supplied by de Blainville. A few species of birds are mentioned, also, by de Blainville on pp. III-IV in a chapter on "Instructions zoologiques relatives au voyage" and on pp. XIX-XXII in a general survey of the scientific results of the voyage. A number of new species are described by Eydoux and Souleyet. The plates of birds are by Prévost.

Vol. I is divided into two parts bearing the distinguishing signatures, "Partie I" and "Partie II." The first part (as so divided) includes pp. I-IV (pref.), I-XXXIX+1, and 1-132, which just close the ornithological portion of the volume. The second part embraces pp. 133-334. Sherborn (*Ann. and Mag. Nat. Hist.*, 7, ser. 7, p. 391, 1901), quoting from the *Bibliographie de la France*, 18 Dec. 1841, *Wiegmann's Archiv*, 1842 (Jahrg. 9, 2 Bd.), pp. 16 and 38, and l.c., 1843 p. 156, cites pp. I-XXXIX and 1-106 as of 1841, and 107-328 as of 1842. This division does not accord with the signatures in the volume while, on the other hand, additional evidence seems to point to the publication of pp. 107-132 with "Partie I" where they naturally belong. *Wiegmann's Archiv* gives no references to pages of the "Voyage," but (in 1842, p. 16) says that the part published includes the mammals and birds, while on pp. 84-85 of the same year an extensive review is given of the paper by de Blainville (on *Chionis*) which occupies the pages in dispute (107-132). In the next year, 1843, p. 156, the reviewer states that he has not seen the remainder of the zoology of the "Voyage" (which is here noted as published) and will have to postpone his review of it, accordingly. Evidently, pp. 107-132 could not have been among the portions included here and must have appeared the year before when it was reviewed. "Partie I" includes the preface (pp. I-IV) which is dated November 1841 and if all of "Partie I" appeared together, it fixes the

date of the ornithology of the voyage as between the first of November and December 18 of that year. The date on Vol. II is conceded to be correct by Sherborn (l.c.). The plates may have accompanied the text.

A curious old work on song-birds and methods of catching and keeping them. The illustrations are all woodcuts, most of which are signed, "Iohannes Maius." Four illustrations are duplicated on regular leaves and five on inserts, one of the former being overprinted on a figure which, in turn, is duplicated on one of the inserts. One of the inserts is not elsewhere printed. These inserts appear to be proof-sheets since they have no lettering on the reverse (as in the copies elsewhere in the book) but often are backed by poor impressions of some other figure; they are pasted on blank sheets. The copy is beautifully bound in crimson morocco with gold tooling, the binding being signed by "Chambolle-Duru."

A work on the eggs of the birds of Holland, of unusual merits. The plates consist of separate figures of single eggs mounted in panels with a very pleasing effect, and the representations are mostly very natural and accurate. The text combines the usual tabulation of nidification-data (placed opposite the respective plates) with a special study of the characteristics of the eggs of the different families (placed at the head of each family). This study embraces the texture, composition and pigmentation of the shell, the dietary and other causes for variation or peculiarity in ground-color or markings, and similar topics not usually discussed in oological handbooks. The work was issued in 7 parts, somewhat as follows. Pt. I, pll. 1-10, 12, 13, 15, 16, 20, 23, 25, 27-29, 33-35, 37, 39-44, 46, 47, 76, 83 and 84, Sept. 1911 (reviewed Auk, Jan. 1912); II, (40 pll.?), 1911 (Zool. 1 vol. post 8vo, 19 ll. (?). Between Aug. 1 and Oct. 24, 1905.

Part I contains a list of birds obtained and observed by the author from Jan. 1, 1904 to Aug. 1, 1905, including only such species as were previously unrecorded from Dominica. Notes are given on the habits or occurrence of each species. Pt. II treats, similarly, those species, also formerly recorded, which were observed during the preceding year, and closes with a list of all species of birds known from the island. A third part, separately (sub)titled and, according to the errata, intended to be separately paged, contains the descriptions of three Dominican birds considered to be new,—*Thalurania belli*, *Buteo (latissimus) rivierei*, and *Septophaga* (sic) (*ruticilla*) *tropica*.

Descriptions and colored plates of a number of tropical weaver-birds, finches, and tanagers. According to Engelmann, the work appeared in 12 livraisons from 1805 onward. The Cat. Libr. Brit. Mus. (Nat. Hist.), quoting the Journ. Gén. Lit. France, credits Pts. 1 and 2 to 1805, 3 and 4 to 1806 and 5 and 6 to 1808, but the limits of the various parts are unknown. On p. 109 there is a reference to p. 239 of Temminck's "Catalogue Systematique du Cabinet d'Ornithologie" (1807 q.v.) which contained a criticism of matter published on p. 58 of the present work; hence it may be inferred that p. 58 was included in Pts. 1-4 and that p. 109 was issued in or after 1807. On p. 110, Temminck is called the author of the "Histoire des Pigeons" (Cf. Knip, Les Pigeons, 1809-11.) the first number of which appeared in 1809; hence the last number of the present work may be supposed to have been issued in 1809 or later.

Descriptions of many North American birds, with hand-colored plates of most of them. Great uncertainty exists as to the dates of appearance of this work. Engelmann notes that it appeared in 22 livraisons of 6 pll. each, dating 1807 and "ann. suiv." Richmond (*Auk*, 16, p. 327, 1899) gives Dec. 1, 1807 as the date of the first livraison. Sherborn (*Index Anim.*, Sec. 2, Pt. 1, p. CXXVI, 1922) thinks that all of Vol. I should be dated 1807. Owing to the close approximation of dates in Wilson's "American Ornithology," 1808-14 (q.v.), exact determination of the dates of the present work would be very desirable and may necessitate some changes of nomenclature when they are fully known. There is an undated, unsigned manuscript note pasted in the front of the copy at hand, purporting to be from Desray, the editor of the work, advising that 22 livraisons had been published and that he was no longer connected with the work and had no intention to continue it. The note further states that there were two formats, a "Jesus Velin" and a "Columbier, aussi Velin," of which latter there were but 20 copies including the present one. Engelmann catalogues a format with black plates in addition to the two issues here mentioned. As regards the apparent incompleteness of the work, Vol. I, pp. III and IV, contains references to Vols. III and IV which were never published.

An essay on the classification of birds, with diagnoses of the genera and higher groups and the nomination of one or more species (usually in vernacular) for each genus. Many of the generic names are new and sixteen new species are described on pp. 68 and 69. The receipt of the work was acknowledged in the *Bibliographie de la France* on April 14, 1816, according to Mathews (*Birds of Australia*, 7, p. 472, 1919). The original is quite rare but has been reprinted by the Willughby Society in 1883 (q.v.).

Originally planned to give colored figures of all the birds in the galleries of the Paris Museum, accompanied by brief general accounts of each. Six livraisons were issued thus, with 24 plates by Oudart and with anonymous text which is probably also by Oudart since the dedication is signed by him. This original matter forms the variously paged text and the unnumbered plates at the close of Vol. II. The enormity of this project caused its abandonment and the substitution of a more modest program, with the writing of the text assigned to Vieillot, and livraisons 7-82 carried the work to completion.

Considerable confusion exists as to the composition of the various livraisons, although the date of each is known with fair accuracy from the current numbers of the *Bibliographie de la France*, quoted by Mathews (*Austr. Av. Rec.*, 2, No. 7, pp. 153-158, 1913). In general there were 4 colored plates to each livraison, but there were exceptions and the 33 uncolored plates of bills and feet (pll. A-HH in Vol. II) were distributed over the course of the work where their points of occurrence are uncertain. The citations quoted by Mathews give, in most cases, the number of plates to each livraison and sometimes indicate the appearance of a black plate, but the figures fail to agree with other known facts. Livraisons 34, 55 and 58 are said to contain double plates. The three double (or folded) plates of the work are 107, 192 and 204, and these are spaced so as to agree with each other and with the number of plates as given for the intervening livraisons. However, Mathews, quoting the "*Bulletin Général et Universel*" of Férussac, shows that Livrs. 26-28 contained Pl. 76-87 (in regular order, four to each livraison), and these figures will not permit the occurrence of Pl. 107 in Livr. 34 nor with Pl. 1 in Livr. 7. Livr. 16 is said to be missing from the set reviewed in the *Bibl. de la France*, so that the number of plates contained in this part remains a matter for conjecture, as does the proper apportionment of some plates in every part thereafter. Furthermore, it is impossible to correlate the number of plates in some of the livraisons with the number discussed in corresponding signatures of text, from which it appears that text and plates were not always synchronous and that a description and name may have preceded the corresponding figure or vice versa.

Irregularities in the bound copy are as follows. Parts I and II (Vol. I) are each paged separately; Pts. III-V (Vol. II) continuously, with the plates numbered consecutively from Pt. I to Pt. V. Plate 151 is omitted and 23 bis added. Pl. 300 occurs between 232 and 233 and 301 between 292 and 293.

1 vol. demy 4to, 3 pr. ll. (half-tit., pref.), pp. 469-750 [pll. XXII-XXVII missing; col.]. Munich.

A monograph of the parrots, with descriptions of many new genera and species. The work appeared originally in the *Abhandlungen der königl. Bayerischen Akademie der Wissenschaften, Mathematisch-physikal. Classe*, 1, 1832. Coues and Engelman quote the *Denkschriften der Königl. Akad. der Wiss. zu München*, 1, 1832, but Vol. 1 of that publication appeared in 1808 and the preface to the present work is dated Christmas 1830. The colored plates, missing from the present copy, are listed by Coues. A separate edition is listed by the Catalogue of the Library of the British Museum (Natural History) under date of 1835, apparently separately paged; the copy at hand has the original pagination.

Descriptions of the appearance and habits of 255 British birds, illustrated by copper-plate engravings of each. One leaf is devoted to each subject, printed on one side only, with text on the lower half of the page and the engraving above. Diagnostic characters of genera and orders are given on interpolated leaves, with the addition of a preface in Vol. I. The title-pages are identical in both volumes. The drawings, with a few exceptions "copied from Brisson, and others", are original, 200 of them from specimens taken by the author, the remainder from specimens in the collections of Parkinson and Latham. The work exists, also, with colored figures.

London.

An antiquated manual for the cage-bird fancier. The exact date and authorship are uncertain. Although the publisher's name on the title-page is almost obliterated and another name written above it, on p. 89 the name and address are reprinted, thus ascribing the authorship to J. Tailor. However, Mullens and Swann cite a work of 1728, under the authorship of Thomas Ward, which has a nearly identical title except for minor differences and the absence of the words, "A New Edition." The resemblance appears to be carried into the address of the writer while the pagination of the book is nearly the same. It seems

probable, therefore, that the book is a copy of Ward's work and that J. Tailor may have purchased the right to publish it along with the business at The (Bell and) Bird-Cage, all of which may have been transferred later to 'Ti Morton.'

An account of the birds of the state, with brief descriptions (from Baird, Coues and Ridgway) and with notes on the habits and the economic importance of each. A check-list of species, with brief annotations, precedes the index at the close of the volume. This work was issued in an edition of 6000 copies which was exhausted almost at once, and a revised and enlarged edition was thereupon prepared and issued in 1890 under the same short title (q.v.). The illustrations consist mostly of figures from Audubon's plates, rearranged and lithographed with more or less departure from the colors of the originals.

Following each specific name are given in tabular form the volume and plate-numbers, the number of the original part, and the year of issue. Since the final arrangement of the plates in Gould's works is without regard to the sequence of issue, the present volume is extremely useful in determining the dates of publication of the various plates.

Waterton, Charles.

1837. An | ornithological | letter | to | William Swainson, Esq.
F.R.S. | &c. &c. | By | Charles Waterton, Esq. | Walton-Hall. |
Wakefield: | Richard Nichols, bookseller. | 1837.

1 vol. post 8vo, pp. 1-15. 1837 (circa March 17).

A tirade directed against William Swainson, his beliefs and theories and even his friend, Audubon, in reply to alleged slights and criticisms by Swainson against Waterton. This letter was republished in Waterton's "Essays on Natural History, Second Ser., 1844 (4th ed., pp. 189-204, 1851, q.v.). In the present form it is a separate publication. The copy at hand was folded and addressed on the back to John Phillips Esq., Yorkshire Museum, York, and is postmarked "Wakefield MR 17 1837".

the author, [with a continuation of] and a view of Walton Hall
[the autobiography of the author]. | Eighth [Fourth] edition. |
London: | Longman, Brown, Green, and Longmans. | 1851.

2 (should be 3) vols. cap 8vo. Vol. I, pp. I-LXXXIII+1, 1-334,
1 l.+pp. 1-32 (advt.), frontisp. Vol. II, pp. I-CXLII, 1 l. (subtit.),
pp. 1-204, 1-4+1-32 (advt.), frontisp. London.

A series of essays on a variety of subjects, many of them ornithological, and many reprinted from the pages of Loudon's Magazine of Natural History. The articles are often controversial or contentious, with especial direction against Waterton's literary adversary, William Swainson. As shown in the transcription of title, the two volumes appear to belong to different editions although they are dated the same year. Both volumes in their first edition were published somewhat earlier,—the First Series in 1838 and the Second Series in 1844; the Third Series appeared even later than the present reprints, in 1857. The pagination of the original edition of the present volumes (as given by Mullens and Swann) differs from the reprints at hand, but I think the subject matter remains unchanged. The present copy contains the autograph of Geo. N. Lawrence.

Popular essays on a number of common British birds. The cover bears the name of Giacomelli, only,—the artist for the work.

Watters, John J.

1853. The | natural history | of | the birds of Ireland, | indigenous and migratory, | containing | descriptions of the habits, migrations, occurrence, and | economy, of the 261 species comprised in the fauna. | By | John J. Watters, | Associate Member of the University Zoological Association. | Dublin: | James McGlashan, 50 Upper Sackville-St. | William S. Orr and Co., London. | John Menzies, Edinburgh. | 1853.

1 vol. cap 8vo, pp. I-XV+1, 1-299+1. Dublin.

Accounts of the habits, etc., of the birds of Ireland, without descriptions of plumages. Prepared at the suggestion of William Thompson who regretted the excessive cost of his own "Natural History of Ireland," 1849-56 (q.v.), and expressed a desire to see a cheap work published on the same subject. Many interesting field observations are recorded in this little work.

1910. Contributions from the Charleston Museum | Edited by Paul M. Rea, Director | I | **Birds | of | South Carolina** | by | Arthur Trezevant Wayne | Honorary Curator of Birds in the Charleston Museum | with an introduction by the editor | Charleston, S. C. | 1910.

1 vol. royal 8vo, pp. I-XXI+1, 1 insert-slip (errata), pp. 1-254, 1 map (fold.). Charleston.

A catalogue of the birds of the state, with extended notes on distribution, habits, local occurrence, etc. The list is constructed on the basis of the coastal region fauna, with additional species from the interior of the state added in a separate section. A hypothetical list follows and a local bibliography is added. The introduction by Rea consists of a short account of the physiography of the region and a history of the ornithology of the state.

1 vol. imperial 4to, pp. 1-48, pll. 1-4 (col.; by E. Traviés). Paris.

The ornithological portion of Webb and Berthelot's natural history of the Canary Islands, published in the years 1835-50 (Vol. II, Zoology, 1835-44). The present section appears to have been issued as a unit (traces of original ?

wrapper remain), forming a portion of Pt. 2 of Vol. II, and probably dating 1841. Dresser (*A History of the Birds of Europe, 1871-82, q.v.*) cites 1841, as does Koenig (*Journal für Ornithologie, July and Oct., 1890, pp. 398, 404 and 483*); a number of references are given in the work itself to publications dated 1840. The paper describes 108 species of birds, 5 of which are new, and gives observations on habits based on the field notes of Webb and Berthelot (Sept. 1828-April 1830) together with other critical discussions. The ornithology has been quoted variously as of Webb and Berthelot, of Moquin-Tandon, and of all three authors, the last being indicated by the subtitle-page transcribed above.

1 vol. 8vo (6x7¾), pp. 1-82, 24 pll. (col.). Chicago.

Extracts from the works of Audubon, Bendire, Nuttall and Wilson, modified, giving accounts of 24 species of North American birds. A brief account of the distribution of each species is given by the editor. The illustrations are from photographs of mounted birds and are not very attractive. The book is intended for a school reader in nature study. Book II was published in 1921.

A series of colored plates illustrating the species of European birds described by C. J. Temminck in the second edition of his "Manuel d'Ornithologie," 1820-40 (q.v.). The only text is the table of species on pp. 1-27 of Vol. I, this being copied, in slightly altered form, from the correlative table in Temminck's "Manuel," Ed. 2, Vol. III pp. 661-691, but containing the same references to the several volumes of that work. This atlas was issued originally in livraisons (Engelmann gives 55) of 10 pll. each (up to livr. 50) under cover-title of "Atlas des Oiseaux d'Europe, pour servir de complément au Manuel d'Ornithologie de M. Temminck" (Cf. the "Manuel," Ed. 2, Vol. III, p. LXX.). This title, apparently, was afterward changed to "Atlas des Oiseaux d'Europe d'après C. J. Temminck" on the title-pages furnished at the completion of the work.

[? Cf. Cat. Libr. Brit. Mus. (Nat. Hist.)]. In this original form the work occupies 3 vols. (Brit. Mus.) for which the dates are given by the Cat. Libr. Brit. Mus. (Nat. Hist.) as 1826, 1828 and 1842; the publishers are given by Engelmann as Belin and H. Cousin. The 32nd livraison was on sale at the time of publication of Vol. III of Temminck's "Manuel" in April 1835, according to a statement on p. LXX of that volume. The present copy belongs to a later reissue, possibly consisting of the original plates with new title-pages. The work was sold with or without Temminck's volumes.

1 vol. royal 8vo, pp. 188-628. Columbus.

A concise manual of the birds found in Ohio, with descriptions of species, genera and higher groups, synonymy and distribution of species, and notes on the habits and local occurrence of each. Several synoptic tables are given and an appendix contains a check-list of species with dates of occurrence, a list of birds observed in the author's garden at Columbus, additions and corrections, a bibliography, a reprint of a paper by the author on patterns of coloration, and a glossary of technical terms. The work was long delayed in publication. It was begun in 1873, started through the press in 1879, completed in 1881 and actually published late in 1882 (Cf. Coues, Bull. Nuttall Orn. Club, 8, April 1883, pp. 110-112.). It was revised in 1903 and brought up to date by Lynds Jones in the "Ohio State Acad. Science, Special Papers No. 6, The Birds of Ohio" (q.v.).

A complete report, by H. W. Henshaw, on the birds secured by the Wheeler Surveys in the United States, west of the one hundredth meridian; with descriptions of many species, and with synonymies, tables of measurements and field notes for all the forms treated. The work appeared in Vol. V of the Report of the Survey, including an index to the ornithological section on pp. 977-989 +1 of that volume. The present copy is one of a number issued separately at the same time as the complete Vol. V, but with title-page altered to define the chapter which is included and with the table of contents and list of plates restricted to the references to that chapter; the letter of transmittal and the introductory letter accompanying Vol. V, have the text limited in like manner, and the index is omitted.

An annotated list of the birds of Arkansas, with notes on their habits and local distribution. A check-list of species and a list of permanent and summer residents are prefixed and a bibliography is appended.

Wheelock, Irene Grosvenor.

1904. Birds of California | an introduction | to more than three hundred common | birds of the state and adjacent | islands | with a supplementary list of rare migrants, accidental | visitants, and hypothetical subspecies | by | Irene Grosvenor Wheelock | author of "Nestlings of Forest and Marsh" | with ten full-page plates and seventy-eight drawings | in the text by Bruce Horsfall | [*Blazon.*] | Chicago | A. C. McClurg & Co. | 1904.

1 vol. crown 8vo, pp. I-XXVIII, 1-578, 1 l. (advt.), frontisp. (monochr.), 9 pll. (by Bruce Horsfall), 77 text-figs. Chicago. Febr. 20, 1904.

A popular hand-book of a selected number of the birds of California, arranged according to habitat and color instead of systematic classification. A brief diagnosis is given of each with notes on its geographical distribution, local breeding range and season and its nidification, while the main text is devoted to an account of its habits, written from personal observations and from the published writings of other observers.

Wheelwright, Horace William. [= "An Old Bushman."]

1871. A | spring and summer | in | Lapland. | By | An Old Bushman, | author of "Ten Years in Sweden." | [*Quot.*, 6 lines.]. | **Second Edition**, with Coloured Plates. | London: | Groombridge and Sons, | 5, Paternoster Row. | MDCCCLXXI.

1 vol. crown 8vo, pp. I-VIII, 1-407, 6 pll. (col.; of birds). London.

A narrative of travel and observation in Lapland in 1862. "As the Author's sole object in going up to Lapland was for the purpose of collecting birds and eggs, the present work will be found rather as a guide to the ornithologist than any other class of reader." In addition to miscellaneous notes on birds found elsewhere in the volume, pp. 243-386 and all of the plates are ornithological. The first edition, without colored plates, appeared in 1864.

2 vols. superroyal 8vo. Vol. I, pp. I-XXXII, 1-294, frontisp. (photograv.), 14 pll. (13 col.; by Grönvold), 1 map (col.; fold.). Vol. II, pp. I-XVIII, 1-410, frontisp. (photograv.), 3 pll. (2 col.), 1 map (col.; fold.). London.

A manual of Tunisian ornithology. Synonymy and short descriptions of the species are given, with observations on plumages and other variations and with notes on distribution and habits. A short bibliography is included and the introduction discusses the topography of the area in question. The 15 plates of birds are hand-colored.

White, Adam.

1885. A popular | history of birds | comprising | a familiar account of their classification | and habits. | By | Adam White, | Assistant, Zoological Department, British Museum. | London: | Lovell Reeve, Henrietta Street, Covent Garden. | 1855.

1 vol. 16mo (5x6½), 3 pr. ll. (half-tit., tit. and ded.), pp. V-VIII, 1-347, pll. I-XX (col.). London.

A popular, general account of the entire class of birds, with mention of characteristic or interesting species. The plates are hand-colored but are not very accurate either in color or drawing, although the text appears to be reliable. The preface is dated Nov. 1, 1855.

White, Ernest William.

A general account of the author's travels throughout Argentina, with numerous references to animals and plants, including many notes on the habits of local birds.

White, Gilbert. (Kearton, Richard.)

1924. The Natural History of | Selborne | by | Gilbert White | with notes by | Richard Kearton, F.Z.S. | and 85 photographs | including many taken specially at Selborne | by | Cherry Kearton | and | Richard Kearton | Arrowsmith :: London :: W.C.I.

1 vol. 8vo (7¼ x 9¾), pp. 1-248, frontisp., 78 pll. (on 42 ll.). London.

A recent edition of this classic, which was first published in 1789 and has since been reissued in at least as many editions and reprints as there are years since the date of its first appearance. The first issue by Kearton dates 1902. The illustrations in the present edition are from photographs, many of which are illustrative of Selborne scenery but most of which are of ornithological subjects.

White, John.

1790. Journal | of a | Voyage to new South Wales | with Sixty-five Plates of | Non descript Animals, Birds, Lizards, | Serpents, curious Cones of Trees and other | Natural Productions | By John White Esq.re | Surgeon General to the Settlement. | [*Engraving.*] | View in Port Jackson | I. White Esq delin T. Milton sculp | London | Printed for J. Debrett, Piccadilly | MDCCXC.

1 vol. medium 4to, engr. tit., 8 ll. (ded., advt., list of subscr., and list of pll.), pp. 1-299+1, 18 ll., 65 pll. (col.; by Stone, Catton, Nodder and others; 29 pll. ornithological). London.

Pages 1-218 contain a general account of the author's voyage to Australia and of his activities after arrival, with incidental mention or brief description of such natural objects as he could identify. Pages 219-297 consist entirely of descriptions of animals, plants and articles of native manufacture with binomial nomenclature employed in many cases, some of the names and descriptions being new. The remainder of the work (unpaged) is devoted to a diary of the winds, weather, temperature, etc. experienced in the outward voyage. The colored plates are taken from specimens which were deposited in the Leverian Museum in London. Mathews (Birds of Australia, 7, p. 472, 1919) mentions a second edition; judging by his discussion, the present copy belongs to the first edition, since the name *Merops carunculatus* does not appear on p. 240.

Whitehead, John. (Sharpe, Richard Bowdler; Ogilvie-Grant, W. R.; Seebohm, Henry.)

1893. Exploration | of | Mount Kina Balu, North Borneo. | By |
John Whitehead. | With coloured plates and original illustrations. |
[Monogram.] | London: | 1893. | [All rights reserved.].

1 vol. 4to (10 x 14 $\frac{3}{4}$), pp. I-X, 1 l. (lists of illustrs.), pp. 1-317, 32 pll. (11 col., 6 of birds; by the author), 21 text-cuts, 1 text-map, 9 decorative initials. London. 1893 (post May 10).

A narrative of the author's travels in Borneo, Java, Palawan and Balabac Islands, especially of his three efforts (the last one successful) to ascend Mt. Kina Balu. The greater part of the work comprises detailed observations on the natural history, especially ornithology, of the regions visited. The appendix, pp. 193-307, "consists of an almost complete description of the zoological collections formed by the Author," reprinted from numerous papers by the author and other workers in various journals, combined, rearranged and augmented so as to make a connected series of catalogues. The ornithological matter occupies pp. 200-263 and comprises three articles; an account of the birds of North Borneo from various articles and descriptions by the author, R. B. Sharpe and Ogilvie-Grant in the Ibis and Proc. Zool. Soc. London; a discussion of the birds of Palawan by the author and Sharpe from the Ibis and the Bull. Brit. Orn. Club; notes on a collection of birds from eastern Java from unpublished field notes, with Seebohm's descriptions of two new species first published in the Bull. Brit. Orn. Club. The introduction is dated May 10.

1909. Egyptian | birds | for the most part seen in | the Nile valley |
by | Charles Whymper | London | Adam and Charles Black | 1909.

1 vol. 4to (6 $\frac{1}{2}$ x8 $\frac{3}{4}$), pp. I-X, 1-221+1, 3 ll. (advt.), 51 pll. (col.;

by Whymper) + 51 guard-sheets (printed), text-figs. 1-10, 1 text-fig. (unnum.). London.

A popular work designed "for the wayfaring man who, travelling this ancient Egypt, wishes to learn something of the birds he sees." Succinct descriptions are followed by brief notes on habits, peculiarities, legendary associations, personal experiences of the author and other pertinent facts. The illustrations are interesting and artistic.

The author's account of his travels in the high mountains of Ecuador, South America. Most of the account is general or with special reference to barometric investigations, but some notes on the avifauna are included. The present copy has imprinted in facsimile handwriting, "Special Edition Subscriber's Copy, No. 25. Edward Whymper." Another edition in 1 vol. was issued in London and New York the same year. A special appendix, containing various reports on collections, was issued in 1891, and a special imprint of this, uniform with the present work, is included in the present set as a third volume (Cf. "Supplementary Appendix, 1891.).

Wilkes, Charles. (Cassin, John.)

1858. **United States** | **Exploring Expedition.** | During the years | 1838, 1839, 1840, 1841, 1842. | Under the command of | Charles Wilkes, U.S.N. | Mammalogy [Atlas.] | and [Mammalogy and Ornithology.] | Ornithology. [*Line omitted.*] | By | John Cassin, | Member of the Academy of Natural Sciences of Philadelphia; [*etc.*, 5 lines.]. | With a folio atlas. [*Line omitted.*] | Philadelphia: | J. B. Lippincott & Co. | 1858.

2 vols., folio (9½ x 12½) and superroyal folio. Text, tit., pp. V-VIII, 1-466, 18 text-figs. Atlas, 2 pr. ll., pll. 1-11 (col.; mammals), 1-42 (col.; birds, by G. G. White, T. R. Peale, W. E. Hitchcock and E. Sheppard). Philadelphia.

These two volumes together constitute the revised Vol. VIII of the complete report of the Expedition (which visited numerous localities in a voyage around the world). Vol. VIII originally was prepared by Titian Ramsay Peale, the Ornithologist and Mammalogist of the Expedition, and was published in 1848 without plates. Carus and Engelmann cite 15 pll. of mammals and 84 pll. of birds, but Hartlaub, in a critical review of the ornithology of Peale's work (*Archiv für Naturg.*, 18 Jahrg., Bd. 1, pp. 93-138, 1852), although he quotes plate-numbers for the various species, says that he had never seen the plates and that no copy of them had reached Europe. Jardine (*Contributions to Ornithology*, 1851, p. 113; idem, 1852, pp. 89-90) cites a copy of the work without plates received by the British Museum and notes that the atlas was never completed. Stone (*Cassinia*, No. 19, pp. 10-11, 1915) states that Peale's report was issued without the plates which he had prepared.

Only 100 copies of the original volume were "printed for distribution amongst foreign governments and by some legislative errors none were printed for distribution at home"; of the number printed, about 90 were distributed, many of them going to countries without scientific establishments, and the remainder were destroyed accidentally in a fire in the Library of Congress. Later, Cassin was commissioned to rewrite the volume, and this new work, with some of Peale's unpublished plates and with various illustrations by other artists, was issued in its present form in 1858 (Stone, l.c., says 1852 in error; the preface is dated May 10, 1858). The original edition is, of course, extremely rare.

In the present edition of the text, pp. 67-416 are occupied by the descriptive account of the birds, 428-452 by the ornithological part (Pt. II) of the catalogue of the collections of mammals and birds made by the expedition, and 453-466 by the general index, including both mammals and birds. Cassin's general text takes no account of many of Peale's newly described species, even omitting certain of his names from the synonymy. However, in the catalogue of the collections, these omitted names are given, together with a transcript of Peale's original descriptions.

The cornerstone of modern systematic ornithology, being the first book on the classification of birds without respect to geographical boundaries. The manuscript was left in an imperfect state by Willughby at his death and was arranged and completed by Ray. The work contains descriptions of all the birds known to the authors or adjudged by them to be sufficiently authenticated by the published accounts of others. It is divided into three parts, the first of which treats of birds in general, the second of land birds, and the third of water birds. The second and third books are divided into several parts, each of which is divided into heads and each of those into articles, each division being characterized by some peculiarity or group of peculiarities. The scheme of classification thus adopted is epitomized on the insert-slips at pp. 25 and 199. An appendix, pp. 297-307, compiled principally from J. E. Nieremberg's *Historiæ Naturæ, Libro Decimo*, 1635, discusses a number of birds of doubtful authenticity or of previous, insufficient description. An English translation, with further additions, was issued by Ray in 1678 under the title of "The Ornithology of Francis Willughby" (q.v.).

Willughby Society for the Reprinting of Scarce Ornithological Works, The.

1880-84. This society was established on May 7, 1879 for the purpose of reprinting certain ornithological works interesting for their utility or rarity. From 1880 to 1884, twelve books or collections of writings were reprinted *verbatim et literatim* or in facsimile. For convenience, these reprints are here catalogued under their respective authors (q.v.). The works are as follows. Those preceded by an asterisk are titles of the reprints only; the others are the original titles of the works reprinted.

The life-work of "The Father of American Ornithology," of which Coues wrote, "Science would lose little, but, on the contrary, would gain much, if every scrap of pre-Wilsonian writing about United States birds could be annihilated." Vols. I-VII appeared during the author's lifetime; Vol. VIII, edited by Ord, was published the year after his death, and Vol. IX, with four plates left completed by Wilson but with text written by Ord from personal observations and from such meagre notes of Wilson's as he could find, completed the work the same year. The prefaces of the various volumes are dated as follows. Vol. I, Sept. 1, 1808; II, Jan. 1, 1810; III, Febr. 12, 1811; IV, Sept. 12, 1811; V, Febr. 12, 1812; VI, Aug. 12, 1812; VII, March 1, 1813; VIII, Jan. 19, 1814; IX, May 1, 1814.

¹Collation from Coues.

In 1824, Ord published a reissue of Vols. VII and VIII with numerous changes in the nomenclature of the species (Cf. ed. 1824.), and with other alterations in the text; Vol. IX was reissued similarly in 1825. Vols. VII and VIII of the set in hand belong to this reissue. Subsequently, various editions appeared from time to time under different editors. Those at hand for comparison are as follows. Ord edition, 3 vols. and atlas, 1828-9; Jameson ed., 4 vols., 1831; Jardine ed., 3 vols. 1832; Brewer, ed., 1 vol., 1840; Brewer ed., 1 vol., 1853; Jardine ed., 3 vols., 1876; Jardine ed., 3 vols., 1877; "Popular Edition" (Porter & Coates, Philadelphia), 3 vols. in 1, 1878. Charles Lucien Bonaparte, in 1824-25, published (in the Journal of the Academy of Natural Sciences of Philadelphia) a series of articles (five in all) entitled, "Observations on the Nomenclature of Wilson's Ornithology." These form a critical review of Wilson's species so far as they go, although they do not discuss the entire number. Following this series of articles, Bonaparte, from 1825 to 1833, published, in 4 vols., an "American Ornithology; or the Natural History of Birds inhabiting the United States, not given by Wilson" (q.v.), which forms a sort of supplement to Wilson and which is incorporated in the Jameson, Jardine and "Popular" editions of Wilson mentioned above. These editions are all ascribed, on their title-pages, to Wilson and Bonaparte as co-authors.

A revised edition of Wilson's later volumes, prepared by Ord. Verbal alterations are made in the text, original matter is added and the following changes in nomenclature instituted. Vol. VII, *Falco ossifragus* of the original - changed to *F. leucocephalus*, *Charadrius calidris* - *C. arenaria*, *C. rubidus* - *C. arenaria*, *Recurvirostra himantopus* - *Himantopus Mexicanus*, *Tringa hiaticula* - *Charadrius hiaticula*, *Charadrius apricarius* - *Vanellus Helveticus*, *C. pluvialis* - *Vanellus Helveticus*, *Tringa interpres* - *Streptopelia interpres*, *Ardea candidissima* - *A. Vol. IX was likewise revised, in 1825, but it seems to have been issued under a special title as given below. Jameson, in the preface to his edition of Wilson (Vol. I, p. VII), says that in 1825 Ord was employed to prepare new editions of the seventh, eighth and ninth volumes, which he did with considerable additions; and

Brewer, in his 1840 edition of Wilson, p. 633, footn., says that the revised copy of Vol. IX appeared in 1825 "correcting several mistakes which had appeared in the first." The revised ninth volume, then, is probably the "Supplement" by Ord, 'Phila. 1825' mentioned (but not seen) by Coues and catalogued by Carus and Engelmann under the following title,—“Ord, George, Supplement to the American Ornithology of Alexander Wilson; containing a Sketch of the Author's Life, with a Selection from his Letters; some remarks upon his Writings; and a history of those Birds which were intended to compose part of his Ninth Volume: illustrated with plates engraved from Wilson's original Drawings. Philadelphia, 1825. 4. (298 pag.).” It is, unquestionably the “Mr. Ord's Supplementary Volume” quoted in Ord's edition of Wilson, 1828-9 (q.v.) and it seems probable that the text in that edition, relating to the species discussed in the original Vol. IX of Wilson, is the text of that volume as revised in 1825 (Cf. Ord's ed. for further discussion.). The editorial prefaces to the reprints of VII and VIII are dated, respectively, May 1 and June 1, 1824.

> American ornithology; | or, | the natural history | of the | birds of the United States. | By Alexander Wilson. | Plates | Engraved and Coloured from Original Drawings taken from Nature. | Published by Collins & Co. New York, | and | Harrison Hall, Philadelphia. | 1829.

4 vols. 4to (size of 8vo) and folio (size of imperial 4to). Vol. I, pp. I-CXCIX, 1-230+1, 2 text-figs. Vol. II, pp. I-VI, 9-456. Vol. III, pp. I-VI, 1-396, 2 text-figs. Atlas, tit., pll. 1-76 (col.). New York and Philadelphia.

The first new edition of Wilson's entire work (1808-14, q.v.), arranged in the systematic sequence of the species, not in the irregular order of the original. The editor states that he “has adhered to the original text, correcting only some erroneous references, and a few verbal inaccuracies, most of which were probably typographical errors.” However, considerable new matter is added in the form of footnotes or supplementary remarks; some of the latter are signed G. Ord,—some are not signed. They agree, for the most part, with the additions made by Ord in his revision of Vols. VII and VIII (ed. 1824, q.v.) and appear to comprise the same matter which is added in this way so as to disturb Wilson's text as little as possible. References are frequently made to “Ord's reprint” in this connection. The matter contained in the original Vol. IX is treated in a different manner. Original text and nomenclature of that volume are aban-

done and a version given which is credited to "Mr. Ord's Supplementary Volume,"—probably the revision of Vol. IX published in 1825 following the revised editions of VII and VIII. Since the original Vol. IX was written by Ord after Wilson's death, liberties with the original copy were more permissible here than with Wilson's own text. The sketch of Wilson's life, in Vol. I of the present edition, is considerably expanded from that published in the last volume of the original work, although both are from the pen of Ord. Ord is sometimes quoted as the editor of the present edition, but the acknowledgment made in the editorial preface to the "valuable counsel and assistance" of that gentleman, seems to open the question to some doubt. The hand-colored drawings in the Atlas are from the original copper-plates (with the addition of the number added *backwards* to pl. 44; missing in the original), colored anew from fresh or preserved material, with pigments which seem to have been of better quality than those used by Wilson. In the copy at hand, the colors are as bright and fresh as if lately applied, whereas in the copy examined of the original, there are few tints which have not suffered and some which have completely disintegrated. An examination of the clearest of the originals and the copy, shows that there are some differences in coloration of the two, aside from those due to fading.

Wilson, Alexander; and Bonaparte, Charles Lucien. (Ord, George; Jameson, Robert; Audubon, John James; Richardson, John; and Swainson, William; Hetherington, W. H.)

1831. American ornithology; | or the | natural history | of | the birds of the United States. | By Alexander Wilson, and Charles Lucien Bonaparte. | Edited by | **Robert Jameson**, Esq. F.R.S.E. & L. F.L.S. M.W.S. | Regius Professor of Natural History in the University | of Edinburgh, &c. | In four volumes. | Vol. I [-IV]. | Edinburgh: | printed for Constable and Co. Edinburgh; | and Hurst, Chance, and Co. London. | 1831.

4 vols. cap 8vo. Vol. I, pp. I-XCVI, 1-271, frontisp. (portr., by James Craw), 1 pl. (by William Banks). Vol. II, 1 l. (adv.), pp. I-IX+1, 1-334, frontisp. Vol. III, pp. I-VIII, 1-320, frontisp. Vol. IV, 1 l. (adv.), pp. I-X, 1-362, 1 l. (adv), frontisp. Edinburgh.

Vols. I-III are devoted to a reprint of Wilson's work (1808-14, q.v.), rearranged and with occasional editorial notes by Jameson. Reference is given under each species to the number of Wilson's original plate and a notation is made if the species is represented in the Edinburgh College Museum, but the synonymy is transferred to a separate place at the end of Vol. III where it is arranged in the order adopted for the text. A number of Ord's notes and comments are printed with due credit. A sketch of the life of Wilson is given in Vol. I, written by W. M. Hetherington. Vol. IV (pp. 1-217) contains a reprint of the first three volumes of Bonaparte's "American Ornithology," 1825-33 (q.v.), with the synonymy transferred to pp. 219-238. On pp. 241-244 there is a catalogue of the species described and figured by Audubon in his "Ornithological Biography," 1831-39, and "Birds of America," 1827-38 (q.v.). The remainder of the volume consists of extracts made from the proof-sheets of

Richardson and Swainson's "Fauna Boreali-Americana" or "Northern Zoology," 1832, including diagnoses of numerous new species, and with annotations after other authors. As credit is given to Richardson and Swainson for the quotations, authorship should remain with them although the present volume may have appeared in advance of the "Fauna Boreali-Americana." Unfortunately there are a number of typographical errors which may likewise have to be credited to them such as *Larus Rosii* on p. 245 and *Calymbris glacialis* on p. 358 (both nomina nuda). A publishers' note in Vol. I is dated April 1831, and one in Vol. IV, August 1831. The work forms Vols. LXVIII-LXXI of "Constable's Miscellany." Coues notes his copy as without any other illustrations than the portrait of Wilson in Vol. I, but the present set has an engraved plate in each volume in addition to the portrait in the first volume. The publishers' note in Vol. I announces the publication of Part I of Captain Thomas Brown's "Illustrations of American Ornithology" as a companion to the four volumes of letterpress here collated (Cf. Brown, Capt. Thomas, Illustrations of the Game Birds of North America, 1834.). This is announced only in medium folio and elephant folio but there was, apparently, an edition the same size as the letterpress in course of publication at the same time, of which only one or two incomplete copies are known. A discussion of this publication is given by Walter Faxon in the Auk, 20, pp. 236-241, 1903, and Auk, 36, pp. 623-626, 1919.

In Vol. III, on p. 98, "*Rubicola Vieill.*" is used for the Woodcock. This is evidently a misprint for "*Rusticola Vieill.*," but may be valid since it antedates *Philohela* Gray, 1841. Cf. Ridgway, U. S. Nat. Mus. Bull. 50, Vol. 8, pp. 155 and 797, 1919; also Oberholser, Auk, 40, p. 516, July 1923.

Vol. III, tit., pp. V-VIII, 1-523, pll. 61-76 (col.; by Wilson), 1-21 (col.; by Titian R. Peale and A. Rider), 2 text-figs. London and Edinburgh.

Vols. I, pp. 1-408, Vol. II and Vol. III, to p. 257, contain a reprint of Wilson's original "American Ornithology," 1808-14, including Vol. IX by Ord, with voluminous notes by Jardine; Vol. III, pp. 259-507, contains a reprint of the first three volumes (all then published) of Bonaparte's "American Ornithology," 1825-33, under the subtitle of "Continuation of Wilson's American Ornithology."

By Charles Lucien Bonaparte." The original plates of both authors are re-engraved by Lizars on a reduced scale and hand-colored, except for the backgrounds which are left plain. The coloration usually shows considerable departure from that of the original plates, and the backgrounds are sometimes modified. Vol. I, pp. IX-CVII contains a life of Wilson by Jardine. The editorial notes are detailed and critical and contain references to many contemporary publications, including Richardson and Swainson's "Fauna Boreali Americana," 1832 (q.v.). The synonymy of the various species is brought strictly up to date.

Brewer's edition. A reprint of Wilson and Ord's text (Cf. Wilson, 1808-14.) with the footnotes and other matter added from the Jardine edition, 1832 (q.v.). The plates contain the figures from Wilson's drawings, rearranged and combined on a fewer number of plates, very much reduced in size and uncolored; those from pll. 75 and 76 of the original are separated, redrawn and inserted as text-figures. At the close of the volume, pp. 682-746, Brewer gives a "Synopsis of the birds of North America," a list of 491 species with descriptions of those not included by Wilson, synonymy and some biographical notes. This edition was reprinted in cheaper form in 1853 (q.v.). The title-page is missing from the present copy, for which reason I have quoted the engraved title which is somewhat different from the full title as quoted by Coues for this work. The latter is the same as quoted for the reprint of 1853, except for the imprint and date which are as given above in the transcript of the engraved title and the collation.

An exact duplicate of the 1840 issue of Brewer's edition (q.v.) except for the coloring of the frontispiece and engraved title and for the imprint on the title and engraved title. It was printed from the same plates as the original issue

although the plates of the illustrations are considerably worn. Coues gives the date of the reissue as 1852 and an examination of the date as printed on the title-page of the present copy shows an irregularity in the last figure which may be due to alteration. The British Museum (Natural History) contains a copy dated 1854.

3 vols. medium 4to. Vol. I, pp. I-CV+1, 1 l. (subtit.), pp. 1-408, frontisp. (portr.), pll. 1-27 (col.; by Wilson). Vol. II, pp. I-VII+1, 1-495, pll. 28-68 (col.; by Wilson). Vol. III, pp. I-VII+1, 1-540, pll. 69-76 (col.; by Wilson), 1-27 (col.; by Titian R. Peale and A. Rider), 2 text-figs. London.

Up to p. 400 of Vol. III, the present edition is a copy of the text of the 1832 Jardine edition of Wilson and Bonaparte; the remainder of the work is a copy of the fourth volume of Bonaparte's "American Ornithology," 1825-33 (without the editorial annotations), which had not been published at the date of the earlier work. The plates are from the same engravings by Lizars as in the 1832 edition, except for pll. 22-27 (belonging to Vol. IV of Bonaparte); the latter are reduced to the same scale as the others but the engraver's name is not given. The plates are hand-colored but the coloring is exaggerated and not a close copy of the original.

The text of the present edition is printed from the same plates as the 4to edition of the previous year. The colored plates are poor chromolithographic reproductions of the engravings by Lizars and others in the same issue.

 3 vols. in 1, superroyal 8vo. Vol. I, tit. pp. V-VI (index), IX-CXXXII (biography), I-XVI (Catalogue of N. American birds), 1-214, 28 pll. (relate to all three vols.). Vol. II, tit., pp. V-VIII, 9-390. Vol. III, tit., pp. VII-VIII, 9-426, 2 text-figs. Philadelphia.

A composite reprint, consisting of the Ord (1828-29) edition of Wilson's text, including Ord's biography of the author, and (Vol. III, pp. 135-408) Bonaparte's "American Ornithology," 1825-33, Vols. I-IV, with the prefaces to the first three volumes. A combined index is given at the close of the work. The plates consist of zinc etchings after the original drawings of Wilson's and Bonaparte's works, reduced and slightly modified by the omission of backgrounds and other accessories, and usually combined four to the page. The original numbers are retained for the component drawings, those of Bonaparte being distinguished by the insertion of the letter B. Vol. I, pp. I-XVI, contains a "Catalogue of North American Birds" by Baird, reprinted from the 1859 8vo edition of the original matter first published in Vol. IX of the "Pacific Railroad Surveys" (reprint erroneously credited to October 1858 and original to Vol. IV of the "Surveys," in acknowledgement on p. I). This edition is a reprint of a 5 vol. issue by the same publishers in 1871, 3 vols. text and 2 vols. colored plates. The pagination appears to be the same, although the colored plates have been replaced by the cheaper illustrations. The present issue is reviewed in the Bulletin of the Nuttall Ornithological Club, 4, pp. 53-54, 1879.

Published in seven parts beginning in December, 1890 and concluding in June 1899. The dates and distribution of the subject matter are given in the table of contents on pages IIIa-IIIc. The book is a thorough dissertation on the bird life of this interesting region, with synonymies, descriptions, critical notes and remarks on habits, distribution, native names, etc. The hand-colored illustrations are excellent. Dr. Hans Gadow contributes an article of four leaves (pp. 243-249) entitled, "Further remarks on the relationships of the *Drepanidæ*" illustrated with three plates (pll. I-III).

A thorough manual of British ornithology, with descriptions of different plumages, measurement, field characters, breeding habits, food, distribution, migration and other such notes systematically arranged. Keys are given throughout; a glossary of terms and guide for measurement are given in Vol. I while Vol. II (Pt. II) presents additions and corrections to the entire work and a systematic list of species with a summary of the status of each and a page reference. The systematic list was published separately in 1924 as "A Check-list of British Birds" (q.v.). The numerous text-figures are credited to Mrs. Hartert. The text is by the various authors, each of whom is responsible for certain sections as outlined in Vol. I, p. *5, deviations from this arrangement being indicated by the initials attached to the contributions. The work was published in 18 parts from March 3, 1919 to Febr. 26, 1924, dates and contents being published on p. IV of both volumes.

1 vol. 8vo, pp. I-XVI, 1-317, 15 ll. (expl. of pll.), pll. I-XV (double; 10 fold.). New York and London.

An excellent introduction to the field study of a number of the commoner birds of New England. Descriptions, songs, season of occurrence, breeding range and habits, and distributional range are given concisely in tabular form, and notes on habits, mostly from personal observations, follow. Introductory chapters relate to general topics and a key to adult males in spring plumage follows the main text. The plates are after Audubon's "Birds of America," Warren's "Birds of Pennsylvania," De Kay's "Ornithology of the State of New York" and Fisher's "Hawks and Owls of the United States." A second edition, with plates by Fuertes, appeared in 1897.

A descriptive and biographical account of the birds of Finland. Vol. I ("Accipitres" to "Columbini") was written by Wright; II ("Gallinae" to "Pygopodes") by Palmén, after Wright's death. The approximate dates are from the prefaces of the two volumes.

A series of excellent, hand-colored plates illustrating 50 species of resident British birds, with notes relative to individual and other variations which do not appear in the illustrations. A companion volume, with the same short title, was issued in 1899. This second work is designated as Vol. II of the present title, but its full title is different, while a note by the publishers in the present volume describes the forthcoming book as a separate work which was to be sold separately. The second volume is entitled, "British Birds: with Some Notes in Reference to their Plumage" (q.v.).

(col.), 347 text-figs. Boston and New York.

A descriptive handbook of the birds of one of the most interesting sections of the United States,—a region including Arizona, southern California and Nevada. Each species or subspecies is concisely described and some one of its distinguishing characteristics noted, while on the opposite page the distribution is stated and, in most cases, delineated on a small map accompanied by a pen-and-ink drawing of the bird or some part of it. Most of the drawings are very good although some of them have suffered partial obliteration of detail through too much reduction in size. At the rear of the volume are field color keys to the species of certain families and a check-list of all the forms described in the earlier parts of the work.

A series of monographs of various groups of birds, prepared by different workers and issued from time to time. The intention was to have the complete series embrace all avian groups, but, up to date, only those families have been treated which are included in the above list; the death of the editor has probably terminated the project.

The dates on the original wrappers are not reliable. Dr. Hellmayr informs me that he received author's copies of his contributions sent to Munich supposedly as soon as issued, as follows. Pt. 9, dated 1910, recd. Jan. 13, 1910. Pts. 15-18, dated 1911, recd. Febr. 21, 1912. Pt. 23, dated 1913, recd. Dec. 9, 1913.

For many years a standard work on the natural history of British birds. Prepared on the style of Bewick and Beilby's "History of British Birds," 1797-1804 (q.v.). Issued in 37 parts of three sheets each, at intervals of two months, according to a note in the preface, p. V of Vol. I. The first part was issued in July 1837 and the last in May 1843; probably Pts. 36 and 37 appeared together on the latter date with addenda to Vols. I and II constituting the last part. A second edition appeared in 1845, together with a supplement (q.v.) to the present edition, bringing it up to date; a third edition (q.v.) and second supplement (q.v.) were used in 1856; a fourth edition (q.v.) (edited by Newton and Saunders) was published in 1871-85. "An Illustrated Manual of British Birds" by Saunders, 1889 (q.v.), partakes of the nature of a condensed revision of the present work. The first edition of Yarrell was published also in demy 8vo, 8vo, and imperial 8vo.

The addenda to Vols. I and II, including full title-pages and illustrated discussions of additional species, are paged for insertion in their respective volumes but, in the copy at hand, are bound as issued, at the close of Vol. III. The preface to Vol. I is also included among the addenda and contains some additional remarks on certain species which are discussed in the first two volumes.

1845. Supplement | to the | history | of | British birds. | By | William Yarrell, F.L.S. V.P.Z.S. | [*Vignette.*] | Illustrated with wood-engravings. | London: | John Van Voorst, Paternoster Row. | M.DCCC.XLV.

- 1 vol. royal 8vo, 2 pr. ll. (tit. and pref.), pp. 7-53, 1-4 (advt.), 14 text-figs. London.

Figures and descriptions of the species of birds obtained since the publication of the first edition of the author's "A History of British Birds," 1837-43 (q.v.), but included in the second edition, 1845. The figures of the head of the White Wagtail in summer and winter plumages, are reprinted from the first edition;

the figure of the entire bird is a remodeled copy of that of the Pied Wagtail in the same work. The preface to this supplement is dated October 1845; a publishers' advertisement at the close of the volume is dated December the same year.

Yarrell, William.

1856. A | history | of | British birds. | By | William Yarrell, V.P.L.S. F.Z.S. | [*Vignette; different in each vol.*] Illustrated by 550 wood-engravings. | In three volumes. -Vol. I [-III]. | **Third edition**, with many additions. | London: | John Van Voorst, Paternoster Row. | M.DCCC.LVI.

3 vols. post 8vo. Vol. I, pp. I-XXXV+1, 1-614, 212 text-figs. Vol. II, 2 pr. 11. (half-tit. and tit.), pp. 1-702, 197 text-figs. Vol. III, 2 pr. 11. (half-tit. and tit.), pp. 1-679, 225 text-figs. London.

A third edition of the work of the same title (q.v.), first published in 1837-43. The additions made in the present edition which are not given in the second, were embodied in a "Second Supplement" (q.v.) published the same year, 1856, which brings the second edition (and with the first supplement brings the first edition) up to the date of the third.

Yarrell, William.

1856. Second supplement | to the | history | of | British birds: | being also a | first supplement to the second edition. | By William Yarrell, V.P.L.S. F.Z.S. | [*Blazon.*] | Illustrated with 18 wood-engravings. | London: | John Van Voorst, Paternoster Row. | M.DCCC.LVI.

1 vol. royal 8vo, pp. I-X, 1-71, 18 text-figs. London.

Descriptions and figures of 18 species of birds not included in the second edition of the author's "A History of British Birds." The booklet is designed to bring the second edition up to date with the third edition (q.v.), published the same year, and with the first "Supplement," 1845 (q.v.), to bring the first edition, 1837-43 (q.v.), also up to date.

Vol. III, pp. I-XVI, 1 errata slip, pp. 1-684, 255 text-figs. Vol. IV, pp. I-VIII, 1 errata slip, pp. 1-531, 173 text-figs. London.

The fourth edition of Yarrell's work of 1837-43 (q.v.),—original in three volumes.

The first two volumes of the present edition were edited and revised by Newton; the latter two by Saunders. Much material, including a number of new illustrations, are added and the work is thoroughly revised and rewritten. In 1889, Saunders condensed the text and published it, with some of its illustrations, under the title of "An Illustrated Manual of British Birds" (q.v.). The present edition was published in 30 parts, the dates of which are given as follows by Coues and the Zoological Record. Part I, pp. 1-80, June 1871; II, pp. 81-160, Aug. 1871; III, pp. 161-240, 1872; IV, pp. 241-320, July 1872; V, pp. 321-400, March 1873; VI, pp. 401-480, July 1873; VII, pp. 481-560, Febr. 1874; VIII, pp. 561-646 "with temporary title-page, note, errata and contents" (Coues) (End of Vol. I.), Nov. 1874; IX, pp. 1-80, Febr. 1876; X, pp. 81-160, Nov. 1876; XI, pp. 101 and 102 (to replace those in pt.
